Pizarro (pi-zä'rō; Sp. pron. pē-thär'rō), **Francisco.** Born at Truxillo, Estremadura, about 1471; died at Lima, June 26, 1541. A Spanish soldier, conqueror of Peru. He was the illegitimate son of a Spanish officer under whom he served in Italy. It is not known who he went to America, and he first appears at Darien, where, for a short time, he was left in charge of the colony (1509). He was with Balboa in the discovery of the Pacific (1513), and in 1519 settled at Panama. Here, in 1522, he joined with Diego de Almagro and a priest named Hernando de Luque in a scheme for conquest toward the south, whence rumors had come of a rich empire. They purchased two small vessels, and Pizarro left Panama Nov. 14, 1524, with one ship and about 100 men, following the coast to about lat. 7° N. After enduring great suffering, he was obliged to return. Almagro, who had sailed later and passed him, met with no better success. Aided by Gaspar de Espinosa, they sailed again in larger vessels about Sept., 1526, penetrated to the equator, and saw large cities and evidences of wealth. Almagro went to Panama for reinforcements, leaving Pizarro and a part of the men on the little island of Gallo (lat. 1° 52′ N.), where they suffered greatly. The new governor of Panama, Pedro de los Ríos, refused to authorize further operations, and sent two ships to take Pizarro off; but he, with 16 of his men, chose to remain rather than give up the scheme, and withdrew to the island Gorgona. They arrived about Dec., 1527, with positive orders to take them off; but, instead of obeying, they used the vessel for further exploration. This time they reached Tumbez and other Indian towns, were well received, saw evidences of great wealth, and at length returned to Panama with the assurance that they had discovered the long-sought southern empire. Pizarro now hastened to Spain, and (about July 26, 1529) he received a concession to conquer and govern Peru. Returning to Panama, Pizarro sailed for the south in Jan., 1531, with three ships and 180 men, landed on the island of Puná in the Gulf of Guayaquil, where he was joined by Hernando de Soto with reinforcements; and thence crossed to Tumbez and pushed inland. On Nov. 15, 1532, he reached Cajamarca, where Atahualpa (the Inca) was encamped with a large army. On the next day the Inca was treacherously seized, and his attendants were massacred. He long endured his fate, but finally, to purchase with gold, and he actually did collect through his officers 326,539 pesos of gold and 51,610 marks of silver, equal to 1,185,410 pounds sterling or $17,500,000 of our money. In the end the captive was slain on a false charge of conspiring against the Spaniards, Aug. 29, 1533. (See *Atahualpa.*) Almagro arrived soon after, but too late to share in the distribution of the spoils. Pizarro now met with no organized resistance, but in the march to Cuzco which followed, the Spaniards were repeatedly attacked. On Nov. 15, 1533, they entered Cuzco, and found there a large and well-built city, with magnificent temples and palaces. Manco Inca, a brother of Atahualpa, was crowned by the Spanish city. In Jan., 1535, he founded Lima as his capital; soon after he received from Spain the title of marquis, and his territory was defined as extending from the 200th meridian (80° 8′ southward for 270 leagues. Almagro, at the same time, was granted the region adjoining this on the south and he set out with an army to conquer it. Meanwhile Benalcazar, with a party of Pizarro's force, had conquered Quito, and Pizarro took possession of it. In April, 1536, the Indians rose in a wide-spread revolt. Manco Inca besieged Cuzco, in which the Spaniards out, but were finally conquered. Almagro, returning from Chile, claimed Cuzco as lying within his territory; war followed between him and Pizarro; and Almagro was defeated and taken prisoner in Dec., 1537, and soon after was executed. His followers were generally allowed to go free, but they plotted against Pizarro, and at length, in June, 1541, attacked him in his palace and slew him with several attendants.

Pizarro, Gonzalo. Born at Truxillo, 1505 or 1506; died at Cuzco, April 12 (?), 1548. Half-brother of Francisco Pizarro, whom he followed in the conquest of Peru. He took part in the defense of Lucon in 1536; was imprisoned by Almagro, April, 1537, but escaped; led the infantry at Las Salinas, April 26, 1538; subsequently served in Churas, where he received a grant of the rich Porco mines; and in 1539 was made governor of Quito. In 1541–42 he led an unsuccessful expedition eastward of Quito to the Napo, and was deserted there by Orellana, who made the first descent of the Amazon. In 1544 he conquered, after some fighting, Pedro de los Ríos, who had been appointed by Viceroy Núñez Vela and the "New Laws"; was ensued, and Vela was defeated and killed on the battle of Anaquito, Jan. 18, 1546. Pizarro was recognized by the colonists as ruler, and his officers seized the Isthmus of Panama. The Spanish government now sent Pedro de la Gasca, with extraordinary powers to take possession of the government. By politic means he obtained possession of the isthmus. Pizarro refused to treat with him, and Gasca landed at Tumbez June 17, 1546. Attracted by numerous desertions, Pizarro attempted to retreat southward. At Huarina, near Lake Titicaca, he and his lieutenant, Carbajal, met and defeated the royalist force of Centeno, Pizarro now returned to Cuzco, and the army of Gasca in the valley of Sacsahuana, April 9, 1548; but his disheartened soldiers deserted or fled and there was no battle. Pizarro gave himself up, and was executed soon after.

Pizarro, Hernando. Born at Truxillo, 1474 (?) or 1479 (?); died there, 1578. Half-brother (legitimate) of Francisco Pizarro, whom he accompanied to Peru, returning to Spain in Jan., 1534, with the royal fifth of the ransom of Atahualpa. He went back to Peru; commanded in the defense of Cuzco against Manco Inca in 1536; and was seized by Almagro April 18, 1537, but was released on his promise to leave the country. Instead of doing so, he took command of his brother's army; defeated Almagro at Las Salinas, April 26, 1538; and put him to death. For this conduct he was afterward kept in mild confinement in Spain for 20 years. During this period he married an illegitimate daughter of Francisco Pizarro (granddaughter of Atahualpa), and had three children.

By Dionysius of Syracuse, who was offended at his opinions, he was delivered to the Spartan ambassador Pollis, who sold him as a slave in Ægina. He was ransomed, returned to Athens, and founded the Academy (which see). In 367 he revisited Syracuse on the invitation of Dion and of Dionysius the younger, but soon left, returning, after a short stay, to Athens about 361. The name has been applied to other similar groups, especially in the 16th century to that formed by Ronsard, Joachim du Bellay, Jodelle, Antoine du Baif, Jodelle, Pontus de Thyard, Dorat, and Remi Belleau. These united in a close league to reduce the French language and literature to a classical form. They had many followers.

French, after all, despite a strong Teutonic admixture, was a Latin tongue, and recurrence to Latin, and to the still more majestic and fortile language which had had so much to do in shaping the literary Latin dialect, was natural and germane to its character. In point of fact, the Pleiade made modern French—made it, we may say, twice over; for it not only did its original work contributions the language in a manner so durable that the reaction of the next century could not wholly undo it, but it was mainly study of the Pleiade that armed the great masters of the Eighteenth movement, the years 1730, to their revolt against the cramping rules and impoverished vocabulary of the eighteenth century. The effect of the change indeed was far too universal for it to be possible for any Malherbe or any Boileau to overthrow it. The whole literature of the nation, at a time when it was wonderfully abundant and vigorous, "Rousseau" for nearly fifty years, and, such practice at such a time never fails to bear its mark.

Pleiads (plī'adz), or **Pleiades** (plī'a-dēz). For some unknown reason, there were anciently said to be seven Pleiads, although only six were conspicuous then as now: hence the suggestion of a lost Pleiad. In mythology the Pleiads were said to be the daughters of Atlas and Pleione, and were named Alcyone, Merope, Celæno, Electra, Sterope or Asterope, Taygeta, and Maia. These names, with those of the parents, have been applied by modern astronomers since Bicciolo (1665) to the principal stars of the group.

Pliny (plin'i), "The Elder" (**Caius Plinius Secundus**). Born at Como (Roman Novum Comum), Italy, 23 A. D.; perished in the eruption of Vesuvius, 79 A. D. A celebrated Roman naturalist. He went to Rome in early youth; served in Africa, and, at the age of 23, as commander of a troop of cavalry in Germany; returned to Rome and studied law; was practicing in Spain under Nero about 70–73; and was charged with other official duties in various parts of the empire. His literary work, which was conducted with extraordinary industry, fills many volumes, and was performed at a waking moment of day or night, being left unaccomplished extended into the departments of tactics, history, grammar, rhetoric, and oratory. Of his writings only his "Natural History" is extant. (See the extract.) His death, an account of which is preserved in a letter of Pliny the Younger, was the result of his efforts to observe more closely the eruption of Vesuvius and to aid those who were in danger.

We possess of the works of Pliny (the Elder) only his "Naturalis historia" in 37 books, a work presenting a total of 2,493 chapters, and collected and arranged by the author until his death. It is a kind of encyclopædia of natural science, but chiefly concerned with its application in human life and art; and accordingly it includes geography, medicine, and the like, as well as the natural history in the narrower sense. It is a great number of works, often hastily and without adequate knowledge or discrimination, hence very unequal in value. The style is barbarous, sometimes merely built upon the subject matter and discarding artistic form, sometimes mannered and rhetorical. On the whole the work has an inexhaustible fund of information, and is useless to the earnest, studious, and patient true spirit of the author. It long exercised great influence both in its original shape and in various abridgments.

Plotinus (plō-tī'nus). [Gr. *Πλωτῖνος*.] Born at Lycopolis, Egypt, about 205; died in Campania about 270. A celebrated Neoplatonic philosopher. He studied in Alexandria under Ammonius Saccas, and afterward taught philosophy in Rome. His works (called "Enneads") were edited by Creuzer in 1858.

The relation in which Plotinus stood to his predecessors among the Greek philosophers is very ably stated. He had made himself acquainted with every system and culled from them all whatever seemed best suited his solution of the great problems of thought and existence. Plato is the chief authority and best starting point in his speculations. But he takes full cognizance of Aristotle, whose system of categories he directly opposes; and he endeavours to adapt to all points to gether the doctrines of the Old Academy and the Stoics. Even to the Epicureans he is indebted to have recovered a correct theory of pleasure. Further perfection, sometimes consisting in a more exact view of the opinions held expressed, and sometimes only consisting in an increase of clearness, is discernible in the Neoplatonic philosophers who succeeded Plotinus, as Porphyry, Iamblichus, Proclus, and others, with great contempt; but these critics of the Neoplatonic system acknowledged their obligations to Plotinus, whose philosophical genius was even in expression. Language was sometimes inadequate with suggestive materials. He was acquainted with Pythagoreans, Democritus, Empedocles, Parmenides, and the most ancient Pythagoreans. We have seen how by the later Peripatetics Aristotelian and Platonic ideas were confounded, and how Plotinus, like Cicero, Philo, Seneca, and Plutarch, before him, was a Neo-Platonist, and he is equally a Neo-Aristotelian and a Neo-Pythagorean in general.

He also wrote various philosophical, ethical, and other works, grouped as "Opera Moralia." He was a Platonist, but accepted himself chiefly with ethical and religious reflections.

In spite of all exceptions on the score of inaccuracy, want of information, or prejudice, Plutarch's lives must remain one of the most valuable relics of Greek literature, not only because they stand in the place of many volumes of lost history, but also because they are written with a graphic and dramatic vivacity, such as we find in few biographies, ancient or modern, because they are replete with reflections which, if not profound, are always moderate and sensible, and because the author's aim throughout is to enforce the highest standard of morality of which a heathen was capable. As one of his most enthusiastic admirers has said, "He stands before us as the legate, the ambassador, and the orator on behalf of those institutions whereby the old-time men were rendered wise and virtuous."

K. O. Müller, Hist. of the Lit. of Anc. Greece, III. 243. (*Bunbbosc.*)

The length of the terrace is 395 feet, and its width 212. She was the daughter of the chief Powhatan, and was about 12 years of age when John Smith was brought a captive before her father in 1607. According to the account of his captivity given by Smith in his "General History of Virginia," published in 1624 after the appearance of Pocahontas in England, she saved his life by interposing her body between him and the war-clubs of his executioners, and thus induced her father to spare him. This episode is omitted from the accounts of his captivity given in his "True Relation" and his "Map of Virginia," published in 1608 and 1612 respectively, before Pocahontas's appearance in England, and is commonly discredited by recent historians. She had married one of Powhatan's captains, and was living with a tributary band, when Samuel Argall induced her treacherously to go aboard his vessel in 1613. He demanded as her ransom a tribute of corn and the restitution of the English captives and goods in the hands of the Indians. Powhatan sent back 7 captives with 3 muskets, a saw, an ax, and a canoe loaded with corn. Poe (pō). **Edgar Allan.** Born at Boston, Feb. 19, 1809: died at Baltimore, Oct. 7, 1849. A noted American poet and writer of tales. His father was an actor. After the death of his mother, an actress, he was adopted by a Mr. John Allan of Richmond, who educated him partly at a private school at Richmond, and in 1815 took him to England and placed him at the Manor House School at stoke Newington, where he remained till 1820, when he returned to school in Richmond. In 1826 he entered the University of Virginia, where, during his short stay, he was noted for his love of strong liquors (though he was not a drunkard) and for deep gambling. Mr. Allan paid his debts, and undertook to place him in his counting-room in Dec. of this same year. Poe ran away, and went to Boston to start publishing his poems in Boston. His first venture was a volume entitled "Tamerlane, and Other Poems: by a Bostonian" (1827). Being without resources, he enlisted as a private in the United States army as Edgar A. Perry, and in 1829 was appointed serjeant-major. In the same year he was reconciled to Mr. Allan, who procured his discharge, and he was shortly after appointed a cadet at West Point, where he went July 1, 1830, but contrived intentionally to get himself dismissed March 6, 1831, as Mr. Allan would not allow him to resign. He then took up his residence with the latter, wandered from one city to another, and settled in Baltimore, where he devoted himself to literature, publishing some of his prose tales and writing critical essays. In 1835 he married Virginia Clemm, and became assistant editor of the "Southern Literary Messenger" at Richmond. In 1839 he was associate editor of "The Gentleman's Magazine" at Philadelphia; in 1841 was editor of "Graham's Magazine"; and in 1844 removed to New York, where he was assistant on Willis's "Mirror." In 1845 he published "The Raven," and at once became a literary lion and reached the summit of his success. In 1847, however, after the death of his wife, he began to deteriorate, and in two years he died in the Washington College Hospital at Baltimore in a delirious state. Among his other works are "Al Aaraaf, Tamerlane, and Minor Poems" (1829), "Poems" (1831), "Tales of the Grotesque and Arabesque" (1840). Many of his poems and tales appeared in periodicals, and shortly after his death his remaining writings were published by his friends. The first half of the fifteenth century has been sometimes called the age of Poggio Bracciolini, which it expresses not very inaccurately as to his literary life, since he was born in 1380 and died in 1459; but it seems to involve too high a compliment. The chief merit of Poggio was his diligence, aided by good fortune, in recovering lost works of Roman literature lay motherless in the repositories of convents. Hence we owe to this one man eight orations of Cicero, a complete Quintilian, Columella, part of Lucretius, three books of Valerius Flaccus, Asconius Pedianus, Ammianus Marcellinus, Tertullian, and several less important writers: twelve comedies of Plautus were also recovered in Germany through his directions. *Hallam*, Lit., p. 64.

The capital from about 1320 was Cracow. From the reign of Sigismund III. (1587–1632) it was Warsaw. The early history of Poland is legendary and obscure. A feudal duchy, it became, by the conquests of Boleslas the Great (992–1025), the center of the empire, with its capital at Gnesen. It passed, in the reign of Wladislas Herman (1081–1102), to Cracow. Under Casimir the Great (1333–70) it became a powerful kingdom. Poland by the Jagellon dynasty (1386–1572) became a great power. Under Sigismund I. (1506–48) the Grand Duchy of Lithuania was united to Poland. Under Sigismund Augustus (1548–72) the Reformation took place in Poland, but the Counter-Reformation followed. It was in succession ruled by elective kings (1572–1795), hereditary kings (1697–1763), and elective kings (1763–95). The Diet of Warsaw (1788–92) made Poland a hereditary monarchy. The Constitution of May 3, 1791, was annulled by the Confederation of Targowitz (1792). The first partition of Poland (1772, 1793, and 1795; see below) was instituted under Kosciusko's lead, took place in 1794, and was also recognized by the Diet of Grodno. Polo (pō'lō), **Marco.** Born at Venice, 1254: died there, 1324. A celebrated Venetian traveler. His father, Nicolo, and uncle, Maffeo, left Constantinople for the Crimea on some commercial enterprise in 1260. Their business eventually brought them to Bokhara, where they fell in with some envoys of Kublai Khan. They were persuaded to accompany the envoys to Kublai, whom they found either at Cambaluc (Pekin) or at Shangtu, north of the Great Wall. Kublai received them well, and sent them as his envoys to the Pope with a request for one hundred educated men to instruct his subjects in the Christian faith in the liberal arts. The brothers arrived at Acre in 1269. They obtained from Gregory X. two Dominicans who turned back at an early stage of the journey. The brothers left Acre on the return journey in 1271, accompanied by Marco, then 17 years of age. They traveled by Sivas, Mosul, Bagdad, and Hormuz, through Khorasan, up the Oxus to the Pamir, by Kashgar, Yarkand, and Khotan, to Lob Nor, and across the great desert of Gobi to Tangut, thence to Shangtu, where they found Kublai Khan in 1275. They were kindly received, and retained in the public service. Marco rose rapidly in the emperor's favor, and was employed in important missions in various parts of the empire. Marco, with his father and uncle, left China in 1292, and after many adventures reached Venice by way of Armenia, India, and Persia in 1295. In 1298 Marco was taken prisoner in the battle of Curzola between the Venetians and the Genoese. He was detained for a year at Genoa. Here he dictated in the French language to a fellow-captive, Rusticiano of Pisa, an account of his adventures, which ultimately obtained a wide popularity, and made Marco Polo one of the first European travelers in China. *Chambers's Encyc.*

Polonius (pō-lō'ni-us). In Shakspere's "Hamlet," the father of Ophelia, and the king's chamberlain.

Polonius, who is the personified memory of wisdom no longer actually possessed. This admirable character is always misrepresented on the stage. Shakspere never pretended to exhibit him as a buffoon: for, although it was natural that Hamlet — a young man of fire and genius, detesting formality, and disdaining Polonius's political grounds, as imagining that he had assisted his uncle in his usurpation — should express himself satirically, yet this must not be taken as every character's conception of him. In Polonius a certain induration of character had arisen from long habits of business; but take his advice to Laertes, and Ophelia's reverence for his memory, and we shall see that he was never to be represented as a statesman somewhat past his faculties, — his recollections of life all full of wisdom, and showing a knowledge of human nature, whilst what immediately passes pass before him, and escapes from him, is indicative of weakness. *Coleridge,* Lects. on Shak., etc., p. 237.

Polotsk, or **Polock** (pō-lotsk'). A town in the government of Vitebsk, Russia, situated at the junction of the Polota with the Düna, 59 miles west-northwest of Vitebsk. It was stormed by the French in 1812. Population, 20,064.

He went to Egypt in 181, with his father and Aratus, as an ambassador of the Achæan League. Polycletus (pol-i-klē'tus), or **Polyclitus** (-klī'tus), **of Sicyon.** [Gr. *Πολύκλειτος.*] Lived in the last part of the 5th century B. C. A celebrated Greek sculptor and architect. He is associated with the high development of abstract proportion which characterizes Greek sculpture. He seems to have realized the athletic type or ideal to the entire satisfaction of the Greek world, and made a figure embodying the accepted proportions, which was called "the canon." This canon is supposed to have been a simple figure carrying a spear (doryphorus), described by Pliny and properly represented by several replicas. The best of these was found at Pompeii, and is in the museum at Naples. Another statue of almost equal importance is mentioned by Pliny, and called "diadumenos" (*i. e.*, an athlete binding a fillet about his head). The best replica is in the British Museum: the original was sold at one time for 100 talents — about $117,000. The most important monumental work of Polycletus was the chryselephantine Hera at Argos, represented by the so-called Ludovisi Juno.

Polycletus, "The Younger." Lived about 400 B. C. A Greek sculptor of Argos.

Polycrates (po-lik'ra-tēz). [Gr. *Πολυκράτης.*] Put to death 522 B. C. Tyrant of Samos from about 536 (or 532) to 522. He was a patron of literature and art.

He had formed an alliance with Amasis, king of Egypt, who, however, finally renounced it through alarm at the amazing good fortune of Polycrates, which never met with any check or disaster, and which therefore was sure, sooner or later, to incur the envy of the gods. Such, at least, is the account in Herodotus, who has narrated the story of the rupture between Amasis and Polycrates in his most dramatic manner. In a letter which Amasis wrote to Polycrates, the Egyptian monarch advised him to throw away one of his most valuable possessions, in order that he might thus inflict some injury upon himself. In accordance with this advice Polycrates threw into the sea a seal-ring of extraordinary beauty: but in a few days it was found in the belly of a fish, which had been presented to him by a fisherman. Thereupon Amasis immediately broke off his alliance with him.

His activity lasted from about 463 to 456 B. C. He was made an Athenian citizen in return for the paintings in the Pœcile or Theseum, and the Amphictyons gave him the right of free entertainment in the Hellenic cities. He was identified with Cimon in the reconstruction of Athens, and seems to have been about him a large school or force of assistants. His principal works were the paintings in the Lesche of the Cnidians at Delphi, described in detail by Pausanias; the paintings of the Pœcile at Athens, made with the assistance of Micon and Panænus; the marriage of Castor and Pollux with the daughters of Leucippus in the temple of the Dioscuri at Athens; some of the pictures in the Pinakotheke of the Propylæum: the picture in the porch of the temple of Athene Areia at Platæa; and pictures at Thespiæ. Pompeii (pom-pā'yē; L. pron. pom-pē'yi). An ancient city of Italy, situated on the Bay of Naples, 13 miles southeast of Naples, nearly at the foot of Mount Vesuvius. It was a flourishing provincial town, containing many villas of Romans, when severely injured by an earthquake in 63 A. D., and was totally destroyed by an eruption of Vesuvius in 79, and buried under ashes. The site was discovered in 1748, and excavations have been carried on down to the present time. Owing to the preservation of the ruins practically intact to the present day by the superincumbent layer of ashes and pumice, the remains of Pompeii afford in many ways the most complete information we possess of Roman material civilization. In this quiet provincial town no civic buildings on a magnificent scale existed, but its modest temples and public offices are not without instruction, while the many handsome private dwellings have afforded a rich store of knowledge, elsewhere unattainable, concerning Roman decorative art and home life. Not the least important yield of the excavations has been the remarkable collection of antique sculptures and utensils, the best part of which is in the Museum Nazionale at Naples. Some excavations were carried on after the original entombment, in the search for treasure; but though it and its wrongs were soon forgotten. In 1748 some peasants came upon the place, and a methodical work of art in a raised house and the "Street of Tombs" supplied objects. Between 1763 and 1765 Winckelmann published the first scientific conjectures as to the history. Regular excavations began in 1860, and have since been carried on with admirable system and regularity, and more than half of the oval area included within the walls has been thoroughly explored. The great theater, of the time of Augustus, is one of the most perfect of Roman antiquity, semicircular in plan, with a diameter of 190 ft. The cavea has 2 precinctions; below the lowest one there are 4 tiers of seats of honor; the upper one has communication by passages and stairs with the triangular forum, and above it there are raised tiers of seats for women and a platform for working the awnings. The cavea held 7 cunei. The temple of Isis has small quadrangular peristyle structure raised on a basement in a peristyle court upon which open the lodgings of the priests. Many interesting objects were found with the temple of Isis here, and sketches of the priests and surroundings indicating that they had sought, too late, to flee. The houses of Castor and Pollux (so named from being a double house with a large peristyle court common to the two) are fine. Each part has its atrium and all its subdivisions complete. Here were found the paintings of Andromeda and Medea, now at Naples. The house of the Tragic Poet is noted for the usual plainness by its stucco decoration in panels and arabesques. The house of Marcus Lucretius is a double house, remarkable also for the fine state of its paintings and for its beautiful reception-room (tablinum) and dining-room. The house of Meleager is notable for its paintings and other decorations. In the atrium there is a marble table supported by winged griffins. The peristyle court, with 24 Ionic columns, is the finest in Pompeii. At the back there is a large room with 4 columned recesses, the 2 front columns connected by arches instead of architraves. The house of Pansa is one of the largest and most elaborate dwellings of Pompeii, measuring 120 by 300 feet. The street fronts were occupied by small shops. The vestibule leads to the atrium, which is bordered by small square sleeping-rooms, and connected by a passage with the handsome peristyle court. Upon this open the dining-rooms, the tricliniums, and the kitchen and servants' quarters. At the back there were a two-storied portico and a spacious garden. The house was ornamented with abundant mosaics, wall-paintings, and other art works. The house of Sallust is a large and richly decorated mansion, in general arrangement similar to the house of Pansa. The garden is bordered by a Doric portico and around it are the rooms. In one corner there is a summer dining-room. Beside the atrium there is a subordinate colonnaded court, with beautifully painted rooms forming a sort of apartment. The house of the Faun is perhaps the best in style of the ancient city. The usual wall-paintings are here replaced by mosaics. The finest of these, found in the house, is that of the Battle of Issus, in the Naples Museum, came from this house. The villa of Diomed is a large and rich residence outside the Herculaneum gate. In the middle is a large peristyle serving as an atrium, upon which open bedrooms, one of them semicircular with windows, the handsomest in Pompeii. Beyond were baths with glass windows, and at the back a garden with porticos and fish-pond. The women's apartments were in an upper story. The cellars contained amphoræ and the skeletons of 18 unfortunate occupants of the old dungeons, reached of three divisions: the fire-rooms for heating, the bath for men, and the bath for women. Each of the baths included a dressing-room (apodyterium), a cold bath (frigidarium), and vapor baths. The men's division is the handsomer; it is decorated with masks and figures in stucco, and with graceful arabesques and reliefs, and had glass windows and marble piscines. The new thermæ were similar, but had many more subdivisions.

A Neoplatonic philosopher, a disciple of Plotinus, and teacher of philosophy at Rome. He wrote a treatise against the Christians, a life of Plotinus, a life of Pythagoras, works on Aristotle, etc.

"Against the Christians," in fifteen books (by Porphyry). This celebrated work, which was answered by Eusebius in twenty-five books, is known to us only from the notices of it in Jerome's commentary and other ecclesiastical writings. Its fate is due to Theodosius II., who ordered it to be publicly burned in A. D. 435, a proceeding which only shows that the apologists had not been successful in answering all its allegations. Modern biblical criticism has sanctioned many of the opinions to which Porphyry first gave a definite expression. But, whether right or wrong, it is to be regretted that we no longer possess a book exhibiting a real acquaintance with the subject, and stating the difficulties which, must, sooner or later, have demanded a solution. *K. Pragmatic Sanction. A term first applied to certain decrees of the Byzantine emperors, regulating the interests of their subject provinces and towns; then to a system of limitations set to the spiritual power of the Pope in European countries; as in the famous French pragmatic sanction of 1268, and that of 1438. Lastly, it became the name for an arrangement or family compact, made by different potentates, regarding succession to sovereignty — the latest being the instrument by which the emperor Charles VI., being without male issue, endeavored to secure the succession through his female descendants. The pragmatic sanction of Charles VI. provided (1) that the hereditary lands of the house of Austria should be indivisible; (2) that in the absence of male heirs these lands should devolve upon Charles's daughters (the eldest of whom was Maria Theresa), according to the law of primogeniture; and (3) that in case of the extinction of this line the inheritance should pass to the daughters of Joseph I. and their descendants.

Among the manufactures are beet, chemicals, machinery, iron, and cottons. The principal quarters are the Altstadt, Neustadt, Kleinseite, and Hradschin. The cathedral has a large and fine choir of 1385, and a modern nave built in a corresponding style. The choir contains a splendid monument of marble and alabaster to the kings of Bohemia, executed in the 16th century by a Flemish sculptor. The vaulting is 118 feet high. Founded apparently about the 8th century, Prague was developed in the 13th and 14th centuries. It became the center of the Hussites, having been taken by them in 1424. [Skt.: *prajā*, creature, and *pati*, lord: 'lord of creatures.'] In the Rigveda an epithet applied to Savitar, Soma, and to Indra and Agni; also, a special genius presiding over procreation, who is in addition a protector of the living. Once in the Rigveda, and often in the Atharvaveda and Vajasaneyisanhita and Brāhmanas, Prajapati is a supreme god over the other gods of the Vedic period. The Prajapati becomes the Brahma of later philosophical speculation. The name is also given to Manu Svayambhuva, as the son of Brahma and the secondary creator of the ten Rishis from whom mankind has descended.

Prajna Paramita (praj'nā pā'ram-i-tā'). [Skt.: *prajñā*, knowledge; *itā*, gone; *pāram*, to the other shore.] Transcendental wisdom: the title of the principal Sutra of the Mahayana School of the Buddhists, or Great Vehicle. It begins with a eulogy of Buddha and the Bodhisattvas, and contains incidentally wonderful phenomena connected with the apparitions of Buddhist saints, but is essentially metaphysical. Its doctrine is the entire negation of the subject as well as the object.

Prakrit (prä'krit). [Skt. *prākṛta*, natural, unchanged, common; from *prákṛti*, original, natural form. Prakrit is the 'natural, unchanged' idiom, as distinguished from the Sanskrit ('adorned, elaborated, perfected' as subjected to artificial regulation); the common, popular language, in distinction from the Sanskrit as the sacred and classic. But the grammarians use the word in the sense of 'derived,' thereby denoting the connection of the Prakrit with the original Sanskrit, much of the Prakrit of books being formed in accordance with rules from the Sanskrit.] The general name under which are comprised the various dialects which appear to have arisen in India out of the corruption of the Sanskrit during the centuries immediately preceding our era. They form the connecting-link between Sanskrit and the modern Aryan languages of India. The sacred languages of the Buddhists of Ceylon, Farther India, and the Jainas of India (Jaina Prakrit) are only different forms of Prakrit, and Pali seems to have been chosen as the Buddhist sacred language to appeal to the sympathies of the people. In Alexander's time Prakrit seems to have been the spoken dialect of the people. The language of the rock-inscriptions of King Ashoka, which record the names of Alexander and other Greek princes (about 250 B. C.), is also a form of Prakrit, and it is found on the bilingual coins of the Greek kings of Bactria. It plays an important part in all the ancient Hindu dramas, the higher male characters speaking Sanskrit, the women and subordinate male characters using various forms of Prakrit, the language varying according to the rank of the speaker. The oldest Prakrit grammarian, Vararuchi, distinguishes 4 dialects (the Mahārāshtri, the Paishachi, the Magadhi, and the Shaurasenī), while the subtly calarpana enumerates 14. Prakrit almost always assumes the Sanskrit bases, altering and eliding certain letters in the original word. It continually affects the concurrence of vowels, which is utterly repugnant to Sanskrit.

Their real purpose is to show how the continuous sanhita text is to be reconstructed out of the pada or word-text, in which the individual words are given exactly in their original form, unaffected by sandhi or the influence of the words which immediately precede and follow. Four are extant: that of the Rigveda, published by both Muller and Regnier; that of the Black Yajurveda, by Whitney; that of the White Yajurveda, by Weber; and that of the Atharvaveda by Whitney.

He executed "La misère," "Gilbert mourant," "La famine" (1835), "Les parias," "Mourir," "Vitellius," and the famous bas-reliefs of "La tuerie" (in plaster), all rejected by the jury (1834). His works were systematically rejected for the Salon till 1848, on account of their extremely marked character. The Marquise de Rambouillet had collected around her, early in the 17th century, a circle of the most noted literary ladies, who came to be known as the "Précieuses"; and the fashion had extended to the provinces when Molière wrote his play. The subject had been employed often enough for personal satire, but it had not yet been made use of for the actual delineation and criticism of contemporary manners. Molière's play is the first of the kind, individuals. The play was directed against the affectations and unreal language of the members of literary coteries which, with that of the Hôtel Rambouillet, the subject had long been prominent in French society. It has but a single act, but in its way it has never been surpassed either as a piece of social satire or a piece of brilliant dialogue illustrating ludicrous action and character. *Saintsbury*, French Lit. p. 368.

Stephens, and James Collinson), who united in 1848 with a view of adopting a closer study of nature, and as a protest against academic dogma. "The Germ" was started in 1850, but only four numbers were published. Its avowed object was "to enforce and encourage an entire adherence to the simplicity of nature." The principle was applied to the writing of poetry as well as to painting. Ruskin earnestly advocated the school, whose methods he defined as the effort "to paint things as they probably did look and happen, not as, by rules of art developed under Raphael, they might be supposed gracefully, deliciously, or sublimely to have happened." A storm of vituperative criticism raged round the brotherhood for five years, and finally spent itself on their successors. By 1854 the band was practically broken up by divergence of methods. Overbeck, who went to Rome in 1810, had with Schadow, Cornelius, Philip Veit, and others (known by friends and enemies as the Preraphaelites, the New-old School, etc.), built up a school based on the works of Perugino and others preceding Raphael. Their work influenced Dyce, Maclise, Madox Brown, Hunt, and others in England, and led to the formation of the Preraphaelite Brotherhood.

Prester (pres'tėr) (*i. e.* 'Presbyter') **John.** A fabulous Christian monarch believed, in the 12th century, to have made extensive conquests from the Mussulmans, and to have established a powerful empire somewhere in Asia "beyond Persia and Armenia," or, according to other accounts, in Africa (Abyssinia). Marvelous tales were told of his victories, riches, and power; and extraordinary letters purporting to have been written by him to the emperor Manuel Comnenus and to other potentates were circulated. Pope Alexander III. sent him a letter by a special messenger who never returned. The foundation of the legend was the fact that Sir John Mandeville forged an account of the name: An emperor of India, who was a christian, went into a church in Egypt on the Saturday in Whitsun week, and heard the gospel read, "In principio," "And he beheld and listend the servyse fulle tentyfly." He then said that he would no longer be called emperor, but priest, and that he would be called Prester John. And so he has ever since been called Prester John.

Pretorian Camp. A camp of ancient Rome, first permanently established by Tiberius, outside of the city walls. It formed approximately a square of 1,500 feet to a side, and was inclosed by a good brick-faced wall 50 feet high, strengthened with towers at its gates. The camp was included by Aurelian in his new line of fortifications, and still forms an abrupt projection in the wall on the northeast. The fortifications and Aurelian additions as high as those of Tiberius, and not sowell built. The latter, and celebrated, that are in the newer work, can still be followed for a considerable distance. Within the camp there were commonly old buildings and well-appointed mobile incrustation. Constantine abolished the Pretorian guard, and pulled down the wall of their camp on the side toward the city.

Pretorian Guard, The. See the extract.

Some remembrance of this fact lingering in the speech of the people gave down to the term Pretorium (the Praetor's house) in peculiar English usage, and caused it to be used as the equivalent of palace. So in the well-known passages of the New Testament, the palace of Pilate the Governor of Jerusalem, of Herod, and of Caesar at Rome. Next the Emperor Rome aswell called the Pretorium. From the palace the troops who surrounded the person of the Emperor took their well known name "the Pretorian Guard." Under Augustus the cohorts composing this force, and amounting apparently to 9,000 or 10,000 men, were scattered over various positions in the city of Rome. In the reign of Tiberius, on the occasion of forming the under-officer discipline, they were collected into one camp on the northeast of the city. The author of this change was the notorious Sejanus, our first and most conspicuous example of a Prefect of the Pretorians who made himself all-powerful in the state. The fall of Sejanus did not bring with it any great diminution of the power of the new functionary. As the Pretorians were the Emperor's almost first recognized, creators of a new Emperor, it was natural that their commanding officer should be a leading personage in the state, as natural (if another English analogy may be allowed) as that the Leader of the House of Commons should be the first Minister of the Crown. Still it is strange to find the Pretorian Prefect acknowledged, and more than ultimate judge of appeal in all civil and criminal cases, and his office held in the golden age of the Empire, the second century, by the most eminent lawyers of the time. This part of his functions soon ceased. When Constantine at length abated the long-standing nuisance of the Pretorian Guards — setting an example which was unconsciously followed by another ruler of Constantinople, Justinian, in his suppression of the Janissaries — he preserved the Pretorian Prefect, and, as we have already seen, gave him a position of pre-eminence in the civil and judicial administration of the Empire. But of military functions he was now entirely deprived, and thus his officer, who had risen into importance in the state only as the most conspicuous Guardsman about the court, was now permitted to do almost anything that he pleased in the Empire so long as he in no way touched soldiering.

Prussia (prush'ä), G. **Preussen** (prois'sen). [F. *Prusse*, D. *Prüssen* a. It. *Prussia*, Sp. *Prusia*, Dan. *Preussen*.] A kingdom of northern Germany, extending from lat. 49° 7′ to 55° 53′ N., and from long. 5° 50′ to 22° 50′ E.; the largest state in area and population of the German Empire. Capital, Berlin. It is bounded by the North Sea, Oldenburg, Denmark, Mecklenburg, and the Baltic on the north, Russia on the east, the Austrian empire, the kingdom of Saxony, the Thuringian states, Bavaria, Hesse, and Alsace-Lorraine on the south, and Luxemburg, Belgium, and the Netherlands on the west. It comprises also the detached territory of Hohenzollern and several smaller exclaves. Among the islands belonging to Prussia are Helgoland, in the North Frisian Islands, the island of Helgoland. The northern and eastern parts belong to the great northern plain of Europe. In the south and southwest the surface is very hilly or mountainous—the principal ranges there being the Riesengebirge and Sudetic Mountains on the border of Austria, and the Thuringian and Harz Mountains, while further west are the Weser Mountains, Teutoburgerwald, Taunus, Westerwald, etc. There are many small lakes in the north and northeast. The principal rivers are the Ems, Weser, Elbe (with the Spree and Havel), Oder, Vistula, Pregel, Niemen, and Rhine (with the Moselle). Among the agricultural products are rye, wheat, oats, barley, millet, vegetables, fruit, hemp, flax, hops, tobacco, beet-root, colsaat, and maize. Wines are largely produced in the west. There is large production of coal and iron, and the country yields about half the zinc in the world; there are also mines of copper, lead, salt, nickel, alum, sulphur, amber, etc. Prussia is one of the principal manufacturing countries of the world. The exports include manufactured goods, timber, grain, tobacco, live stock, etc. The kingdom is subdivided into 14 provinces: East Prussia, West Prussia, Pomerania, Posen, Brandenburg, Berlin, Saxony, Silesia, Hannover, Schleswig-Holstein, Westphalia, Hesse-Nassau, Rhine Province, and Hohenzollern. The government is a hereditary constitutional monarchy, administered by a king and a landtag consisting of two chambers: the Herrenhaus or House of Lords, and the Abgeordnetenhaus of 432 members. Prussia is the principal state in the empire, and has 17 representatives in the Bundesrat and 236 members in the Reichstag. Its king is the German emperor. About seven eighths of the inhabitants are Germans; the remainder include Poles, with a smaller number of Lithuanians, Danes, Wends, Bohemians, and a few Walloons. The dominant religion is Protestant (Evangelical Church), but about one third are Roman Catholics. Prussia had its origin in the Nordmark, which grew into the mark of Brandenburg; this, united with the duchy of Prussia (1618), developed in the 17th century under the Great Elector. The elector Frederick III. assumed the title of Frederick I., king of Prussia, in 1701. Neuchâtel with other territory was acquired in 1707, and part of Gelderland in 1713. A large part of Pomerania (Vorpommern) was annexed in 1720. Prussia rose to a place among the European powers in the reign of Frederick the Great (1740–86), leading events in which were the acquisition of Silesia in 1742 and the Seven Years' War 1756–63. By the first partition of Poland (1772) West Prussia was acquired with the Netze district and Ermeland. Prussia was at war with France 1792–95. By the partitions of Poland in 1793 and 1795 Posen, South Prussia (between the Vistula, Filica, and Prosna), and New East Prussia (north of the Vistula and Bug) were annexed. Prussia lost to France territories west of the Rhine in 1801; received in 1803 the bishoprics of Paderborn and Hildesheim, and large parts of Munster, Nordhausen, Goslar, Erfurt, Lichtenfels, and Mühlhausen; received Hannover in 1805 in return for Ansbach, Cleves, and Neuchâtel; was totally overthrown (at Jena, etc.) by France in 1806; lost in 1807 about half its territories, including its possessions on the left of the Elbe, Kottbus, and the larger part of the territory acquired from Poland in 1793 and 1795, and was reduced to a second-rate state; and took a prominent part in the Wars of Liberation 1813, ending in the overthrow of Napoleon I. and Peace. By the Congress of Vienna it acquired nearly all its former possessions (but not Hannover or the Polish territory lost in 1807), also parts of the electorates of Cologne and Treves, Swedish Pomerania, Danish Lauenburg, Westphalia, Saxony, and large parts of Saxony (Wittenberg, Torgau, etc.). It entered the Germanic Confederation, and belonged to the Holy Alliance. Revolutionary outbreaks occurred in 1848. It was at war with Denmark in 1848–49, and suppressed insurrections in Baden and elsewhere in Germany in 1849. Prussia, Saxony, and Hannover were united in an alliance in 1849. A constitution was adopted in its final form in 1850. Concessions were made to Austria in the Conference of Olmütz, 1850. Prussia interfered in Schleswig-Holstein in 1851, and renounced its rights to Neuchâtel in 1857. After the accession of William I. in 1861 a parliamentary struggle took place between Bismarck and the liberals. The Danish war (1864) and the Schleswig-Holstein question led in 1866 to the war (with Italy and many North German states) against Austria allied with South German states, Saxony, and Hannover. By the victory of 1866 Prussia acquired Hannover, Nassau, Frankfort, Hesse-Cassel, and Schleswig-Holstein, became the first German state, and formed the North German Confederation. After the war between France and Germany in 1870–71 Prussia became the main state in the new German Empire. More recent events are the accession of Frederick III. and of William II. in 1888, and the dismissal of Bismarck in 1890. (Compare *G. grasing.*) Area, 134,463 square miles. Psalms (sämz), or the **Book of Psalms.** A book of the Old Testament, which contains 150 psalms and hymns. The authorship of a large number of the psalms is ascribed traditionally to David. Many of them, however, presuppose for their time of production a later date. The book was probably put together, but the latter is usually regarded as those versions or compositions from it which have arrived especially by the way of the Greek church. The Psalms of the Psalter in the Book of Common Prayer are those of the authorized version, but that of the Latin version of Common's Bible.

The Psalter, as we have it, is manifestly a collection. Psalms of the Exile are the new exception. It is also generally admitted that many Psalms in the present collection embrace within their compass pre-existent collections of a more or less limited extent.

P. T. Letters. A series of letters published by Pope.

Never, surely, did all the arts of the most skilful diplomacy give rise to a serious of intrigues more complex than those which attended the publication of the "P. T. Letters." An ordinary man says that he is obliged to publish by request of friends, and we regard the transparent device as, at most, a venial offence. But in Pope's hands this simple trick becomes a complex apparatus of plots within plots, which have only been unravelled by the persevering labours of the most industrious literary detectives. The whole story is given for the first time at full length in Mr. Elwin's edition of Pope, and the revelation borders upon the incredible.

Ptolemy (tol'e-mi), surnamed **Soter** ('Preserver') and **Lagi** ('son of Lagus'). [L. *Ptolemæus*, from Gr. *Πτολεμαῖος.*] Died 283 B. C. King of Egypt, founder of the Greek dynasty in that country. He was the alleged son of Lagus, a Macedonian of ignoble birth, and Arsinoe; but, as Arsinoe had been the concubine of Philip of Macedon, he was commonly supposed by his contemporaries to be the son of that monarch. He rose to a high command in the army under Alexander the Great, and in the distribution of the provinces on the latter's death in 323 obtained the government of Egypt. He formed an alliance with Antipater against Perdiccas, the regent in Asia, who invaded Egypt in 321 but was murdered by his own troops. He afterward concluded an alliance with Cassander, Seleucus, and Lysimachus against Antigonus, who fell in the battle of Ipsus in 301. He assumed the title of king in 306. In 304 his effectual support of the Rhodians enabled the latter to repel a formidable attack by Demetrius, whence he received the surname Soter or Preserver. He married Cleopatra, daughter of Antiochus the Great, in the winter of 193–192, in accordance with a treaty of peace concluded with Antiochus some years previously.

Ptolemy VI., surnamed **Philometor.** Died 146 B. C. King of Egypt, son of Ptolemy V. whom he succeeded in 181 B. C. He was captured during an invasion of Egypt by Antiochus Epiphanes, king of Syria, in 170, whereupon his younger brother Physcon proclaimed himself king. He was presently released by Antiochus, and for a time reigned conjointly with his brother. Ptolemy VII., surnamed **Euergetes** or **Physcon.** Died 117 B. C. King of Egypt. He succeeded in re-establishing himself in Egypt, which he held as an independent kingdom, until the death of his mother in 90 when he was recalled by the Alexandrians, who had in the meantime expelled his brother.

Ptolemy XI., surnamed **Neus Dionysus** and **Auletes** ('Flute-player'). Died 51 B. C. King of Egypt, illegitimate son of Ptolemy VIII. Lathyrus. He succeeded to the throne on the extinction of the legitimate line of the Ptolemies in 80 B. C. He was expelled by the populace in 58, but was restored by the Romans in 55.

Ptolemy XII. Died in 48 or 47 B. C. King of Egypt, son of Ptolemy XI. Auletes. He ascended the throne in 51 conjointly with his sister Cleopatra, whom he expelled in 49. Ptolemy, L. Claudius Ptolemæus (klâ'di-us tol-e-mē'us). Born at Alexandria: flourished in the first half of the 2d century A. D. A celebrated Alexandrian astronomer, geographer, and mathematician. He "built up a mathematical system of astronomy and geography which was universally received until, in the course of the 16th and 17th centuries, these systems of opinions displaced it. Ptolemy believed that the sun, planets and stars revolved round the earth. His error in calculating the circumference of the globe warranted Columbus in supposing that the distance from the western coast of Europe to the eastern coast of Asia was about one third less than it actually is: and thus encouraged the enterprise which led to the discovery of America" (Draper). His principal publications (at Canopus) extend from 127 to 151 A. D. His astronomical and mathematical work is contained in the "Syntaxis," called by the Arabs Almagest (which see).

Puck (puk). A playful, mischievous elf in folk-lore; otherwise Robin Goodfellow, Will-o'-the-Wisp, etc. Shakspere introduces him in the "Midsummer Night's Dream" as a household fairy, the jester to King Oberon, and he plays many pranks in the wood near Athens. In "Faust" Goethe introduces him as a pervading, diminutive, yet powerful element in the Walpurgis-Night. The tricksy nature of Shakspere's Puck harmonizes better with the etymology. Puck came to England with the Scandinavian sea-kings settlers. Puki in old Norse was a devil, usually a wee devil. His Danish name was Pokker. To the Celts he was Pwca or Pwca. He is Pucwhoon Pur in Hugh's name, and Pug in the sense of hobgoblin, bugbear, and humbug." *Morton.*

The character of Puck, or, as he is properly called, Robin Goodfellow, is literally no other than our own "cutter Ben" (Rupe-bell); and it is evident from this name (which in German the word "Rupel" is derived, the only one by which we can give the idea of the English clown, the very same character is to be found in the popular superstition of the fairies. This belief in fairies was far more diffused through Scandinavia than through England; and again in Scotland and England it was far more actively developed than in Germany. Robin Goodfellow especially of whom we hear in England as early as the thirteenth century, was a favourite in popular traditions, and to his name all the curious tricks were imputed which we relate of Eulenspiegel and other nations of others.

He was city chronologer in 1639. Among his works (largely sacred poems) are "Divine Emblems" (1635), "Hieroglyphics" (1638), and a prose work, "Enchiridion" (1640).

The enormous popularity of Francis Quarles's "Emblems" and "Enchiridion," a popularity which has not entirely ceased up to the present day, accounts to some extent for the very unjust ridicule which has been lavished on him by men of letters of his own and later times. It is, of course, sufficiently absurd that such hasty and slovenly work should have been reprinted as fast as the presses could give it, when the "Hesperides" remained almost unnoticed. But the silly antithesis of Pope, a writer who, great as he was, was almost as ignorant of literary history as his model, Boileau, ought to prejudice no one, and it is strictly true that Quarles's enormous volume hides, to some extent, his merits.

Quetzalcohuatl (kat-säl-kō-wä'tl). [Nahuatl: *quetzalli*, green feather, and *cohuatl*, snake.] A hierogram of the ancient Mexicans. Some stories represent him as one of the four principal gods, controlling the air and wind, and assisting in the creation of the world and man. But commonly he is a man with more or less supernatural attributes, and there are various confused accounts of how he came from a distant country, in the time of the Toltecs or before them, and ruled in Anahuac for many years with great wisdom. Then he went to Cholula, where he lived for 20 years and taught the people to weave, build stone houses, work gold and precious stones, work; but because he would not abolish human sacrifices he was opposed by the priests, and at length journeyed on to Tlapallan, probably on the Gulf coast, and disappeared over the sea, working miracles. Especially at Cholula, as the god of the air and rain, and human sacrifices were made to him. It would appear that the myth was greatly embellished by the Spanish writers, and made of Quetzalcohuatl a kind of prophet or apostle, a white and bearded man wearing a strange dress and practising severe penances, eventually identifying him with St. Thomas. Probably these later myths are due to responsible for the story that he foretold the coming of white men who should give the Indians a better government and religion. It is possible that there was in fact a historical personage of very ancient times. The Maya (Quiché) creative deity Gucumatz somewhat resembles Quetzalcohuatl, and the name has the same meaning.

Quevedo y Villegas (kā-vā'THō ē vēl-yā'gäs), **Francisco de.** Born at Madrid, Sept. 26, 1580; died at Villanueva de los Infantes, Spain, Sept. 8, 1645. A Spanish satirist, humorist, and novelist. He was employed in the civil service, and was imprisoned for political libel. Among his satirical works is "Sueños" ("Visions").

By these [prose satires] he is remembered and will always be remembered throughout the world. The longest of them, called "The History and Life of the Great Sharper, Paul of Segovia," was first printed in 1626, and gave to the fiction invented by Mendoza in his "Lazarillo," and has most of the characteristics of its class: showing, notwithstanding the evident haste and carelessness with which it was written, more talent and spirit than any of them except its prototype. Like the rest, it sets forth the life of an adventurer, cowardly, insolent, and full of resources, who begins in the lowest and most infamous ranks of society, but, unlike most others of his class, never fairly rises above his original condition; for all his ingenuity, wit, and spirit only serve him to struggle on as it were by accident, to some brilliant success, from which he is immediately precipitated by the discovery of his true character. *Ticknor*, Span. Lit., II. 286.

Quiche (kē-chās'). A powerful Indian tribe of western Guatemala at the time of the conquest. They were one of the chief branches of the Maya stock, and, according to tradition, had originally formed part of the great Maya nation. After the breaking up of the original Maya empire, a series of struggles took place until the 12th or 13th century, when the Quiche dynasty became established. Later the Cakchiquels separated from them, and in time became divided into two tribes by the breaking off of the Zutugils. Thus at the beginning of the 16th century there were three great Maya tribes in Guatemala—the Quiches, Cakchiquels, and Zutugils: but of these the Quiches had a certain political and cultural preeminence

Quiches

Their capital was Utatlan, near the present town of Santa Cruz Quiche, northwest of Guatemala, and it is described as a large and fine city, fortified with great skill. The Quiches were ruled by hereditary chiefs, had a complicated system of laws and religion, and kept records in picture-writing. (See *Popol Vuh.*) They were the first Indians encountered by Alvarado when he entered Guatemala in 1524. Their chief, Tecum Uman, brought a vast army against the spaniards, but was defeated and killed; his son, Oxib Quich, was seized and hanged; the city of Utatlan was destroyed; and within a few months the Quiches were completely conquered, many of them being enslaved. Their descendants now form the peasantry of the same region.

Quichuas (kē-chō'äs). The dominant Indian race of Peru at the time of the Spanish conquest. Before the time of the Incas the highlands of Peru were inhabited by many tribes, all or most of which spoke dialects of the Quichua tongue and resembled each other in customs: possibly they were descended from the ancient Pirinas (which see). One of these tribes, in the valleys near Cuzco, rose to prominence under the Inca sovereigns during the 13th and 14th centuries; partly by conquest, partly by a liberal and conciliatory policy, they amalgamated the other tribes, and eventually established an empire which extended from Quito to central Chile. (See *Inca Empire.*) The later conquests along the coast and in the south and east brought in many tribes which were not of Quichua stock, and were never thoroughly amalgamated with the conquerors. In many respects the Quichuas were the most remarkable of American Indians. Their government was a form of state socialism, controlled by a hereditary aristocracy, the whole under the absolute control of a hereditary sovereign. (See *Incas.*) Their internal polity was singularly perfect. They planted maize, potatoes, yucca, etc., and they had long domesticated the llama and alpaca, using the former as a beast of burden and for food, and the latter for its wool, from which they spun fine cloth. They excelled in the working of pottery and in building; and they constructed roads from Cuzco to all parts of the country. They had no knowledge of writing or hieroglyphics, records and accounts being imperfectly kept by means of *quipus*, or knotted cords. Their religion included the recognition of a supreme being, who was worshiped as Pachacamac or Uiracocha; at Cuzco he was represented by a stone statue covered with gold, and also, it would appear, by a polished gold plate. The sun, moon, stars, and many lesser deities were adored with various ceremonies, the sun being particularly prominent. Animals were sometimes sacrificed at the festivals, but human sacrifices, if they existed, were very rare. After the fall of the Incas most of the Quichua tribes submitted to the Spaniards, and were permitted to keep their hereditary chiefs under the Spanish rule. Many of their laws were retained (see *Libro de Tasas*), and from the old system of common labor for the state the colonial *mitta* was evolved, by which every Indian community paid taxes in the enforced labor of a part of its members. This became, as a matter of course, a kind of slavery under which the Indians perished by thousands in the mines. In 1780 Tupac Amaru, a descendant of the Incas, led them in a formidable rebellion which was at length suppressed with great bloodshed. Quichua is still the common language in the interior of Peru, and a large proportion, even of the upper classes, is of Quichua blood. Some of the Amazonian tribes retain their old organization. The name *Quichua* was not originally a tribal designation, but referred to any mountaineer: it was first used for the language by the Jesuit missionaries. Also written *Quechuas, Kichuas,* and *Kechuas.*

Quichua stock. A linguistic stock of South American Indians, embracing the various Quichua tribes of Peru, the Quitus of Ecuador, etc., the Several tribes of northwestern Ecuador, and Colombia have adopted the Quichua language. The Hoh formed the southern division of the tribe. Wars with the numerically superior Salishan tribes gradually reduced their number. He studied it at length, and then took up the original, upon which he finally based his "Idées sur la philosophie de l'histoire de l'humanité" (1825), a work that met with Goethe's hearty commendation. Further travels led him to Germany, Greece, Italy, Spain, and Portugal. He summed up his impressions in "De la Grèce moderne et de ses rapports avec l'antiquité" (1830), "Ahasvérus" (1833), "Allemagne et Italie" (1839), "Mes vacances en Espagne" (1840), etc. In connection with his studies and observations in foreign countries Quinet wrote a number of monographs and contributed many articles to the leading periodicals. He also composed a cycle of epic poems, including "Ahasvérus" (1832), "Napoléon" (1836), and "Prométhée" (1839). He lectured in the faculty of letters at Lyons, and in 1841 accepted a chair of Southern literature at the Collège de France. His best work of this period is "Le génie des religions" (1842). Some copies of Quintilian's Institutions of Oratory, very much corrupted and mutilated by the ignorance or presumption of copyists, were known in Italy before the fifteenth century. But in 1414, while the Council of Constance was sitting, at Lodi, in Lombard Italia, a man commissioned by the promoters of learning to proceed to that place, in search of ancient manuscripts, which were believed to be preserved in the monastic libraries of the city and its vicinity. His researches were rewarded by discovering in the monastery of St.-Gall, beneath a heap of long-neglected lumber, a perfect copy of the Institutions.

He attended school at an abbey near his native town, and went to the university of La Rochelle or Montpellier. In compliance with the wishes of his father, Thomas Rabelais, he became a monk and spent some 15 years in seclusion as a monk at the Cordelier convent of Fontenay-le-Comte (1509–24). He was transferred thence to the order of Benedictine monks at Maillezais, and his occupations during the 6 years that followed are not well defined. In 1530 he is found studying medicine at Montpellier, and two years later practising the profession at Lyons, though he took the doctor's degree in 1537 only. He devoted a great deal of his time to writing, and yet led a wandering life in France and in Italy. He was in charge of the parish of Meudon 1550–52, and died shortly afterward, presumably in Paris. Besides composing yearly almanacs, of which but a few fragments are preserved to this day, Rabelais edited various old medical treatises, and made his lasting reputation with the novels "Pantagruel" (1533) and "Gargantua" (1535), of which the latter comes first in point of the story they both tell. They were published under the name of Alcofribas Nasier, which is simply the anagram of François Rabelais. Their success was such as to encourage a sequel. A celebrated French tragedienne, of Hebrew descent. She was a street-singer in Lyons in 1831 with her sister Sophie, known as Sarah. Choron, director of a school of music, hearing her, was struck with the quality of her voice, and took her with her family to Paris, where she entered his academy. She soon lost her voice, however, and studied the dramatic art with Saint-Aulaire. He had a small theater known as "La Salle Molière," where he produced plays with his pupils as actors. Rachel played soubrettes and tragic parts there from 1834 to 1836. She began to attract attention, and was admitted to the Conservatoire in 1836; made rapid progress; resigned in 1837; appeared at the Gymnase in July of that year; and in 1838 appeared as Camille in "Horace" at the Théâtre Français. Her success was extraordinary, in the greenroom and orchestra as well as in the house. From this time her reputation was secure. She went to England in 1841, and to America in 1855, where she contracted a cold that ended in her fatal illness. Her finest parts were in the plays of Corneille and Racine; a kind of "Adrienne Lecouvreur" she also played Jeanne Darc, Mademoiselle de Belle Isle, Cléopatre, etc.

He lost his parents at a very early age, and was brought up by his grandparents. His studies, begun when he was about 10 years old, at the school of Beauvais, were continued at Port Royal, and finished at the Collège d'Harcourt (1658–1659). On graduating, he went to live with a cousin of his, who was in the service of the Duke de Luynes. He was well received in society, and made stanch friends among men of literary bent. His early training in Greek and Latin classics, especially the former, had been very thorough, and his talents all ran in the direction of intellectual pursuits. He attracted attention in this line for the first time by an ode written for the marriage of Louis XIV., and entitled "Les nymphes de la Seine" (1660). A couple of short comedies, "Amasie" (1660) and "Les amours d'Ovide" (1661), are among his first attempts as a playwright, and unfortunately are now lost. His friendly relations with men like La Fontaine, Boileau, and Molière led him to devote himself to writing for the stage: he thus produced a couple of plays, "La Thébaide" (1661) and "Alexandre" (1665). His first real success as a dramatic poet was scored in "Andromaque" (1667), which is the initial tragedy in a long series of masterpieces. He attempted comedy next in "Les plaideurs" (1668), but reverted completely to tragedy in "Britannicus" (1669), "Bérénice" (1670), "Bajazet" (1672), "Mithridate" (1673), "Iphigénie" (1674), and "Phèdre" (1677). Racine's enemies conspired against him at this juncture, and preferred to him a minor poet named Pradon, who had written a rival tragedy on "Phèdre" which they extolled far above Racine's play. The great poet abstained then for a number of years from composing tragedies, but finally, at the request of Madame de Maintenon, wrote a couple of plays of great lyric beauty, dealing with subjects from the Bible: "Esther" (1689) and "Athalie" (1691). Besides the above, Racine composed four hymns that rank among the finest productions in lyric poetry of his day, also an "Abrégé de l'histoire de Port-Royal," and a few other minor writings. The best edition of Racine's works was made by Paul Mesnard for the "Collection des grands Ecrivains de la France" (1865–74). Racine was made a member of the French Academy in 1673.

Ramachandra (rä-ma-chan'dra). [Skt., 'Rama-moon.' In the Black Yajurveda, Sita, daughter of Savitri, is wedded to Soma, the king of plants and god of fecundity, identified with the moon. Ramanuja (rä-mä'nö-ja). [From *Rāma* and *anuja*, born after, younger brother: lit. 'younger brother of Rama.'] Born about 1017 A. D. at Shri Parambattur, about 26 miles west of Madras: said to have died in 1137. The founder of a Vaishnava sect. He is buried in the great temple of Shriranganath. His distinctive tenet was his assertion of a triad of principles—(1) the immanent spirit, Pratibrahman or Ishvara; (2) the separate spirits of men; and (3) nonspirit. All three are eternal and inseparable, but the spirits of men and the visible world are the nonspirit inseparable on Ishvara. In this Ramanuja was opposed to Shankara, who viewed the separate existence of man's spirit, as distinct from the universal spirit, as illusory. Still he so far accepted a modified form of Shankara's system of nonduality that his own system is called that of "qualified non-duality" (vishishtadvaita). In the 13th century a division arose among his followers, the northern or Vadagalai school (Vadagalai) and the southern (Tengalai). In their view of the human spirit's dependence on Vishnu the Vadagalais are Arminian, the Tengalais Calvinist, and the sects have struggled as fiercely as in Europe. At present the chief ground of contention is the frontal mark, the Vadagalais holding that it should represent the impress of Vishnu's right foot, while the Tengalais claim that equal reverence is due to both feet. Each of the present chiefs of the two sects claims unbroken succession from Ramanuja himself, the Vadagalai spiritual successor living in the district, the Tengalai in the Tinnevelly. Each makes a periodical visitation of his diocese, holding a kind of confirmation, when he brands the initiated with the proper marks. See Williams's "Brahmanism and Hinduism," pp. 119–129.

Ramasetu (rā-ma-sā'tö). [Skt., 'Rama's dike.'] The ridge of rocks which extends from the south extremity of the Coromandel coast toward Ceylon, supposed to be built of stones by Hanumat as a bridge for the troops of Rama when fighting Ravana; "Adam's bridge."

Ramatapaniyopanishad (rā-ma-tä-pa-nē-yō-pa-ni-shad'). [Skt., 'the (pure) golden Upanishad treating of Rama'; from *Rama* and *tapaniya* and *Upanishad.*] An Upanishad of the Atharvaveda, in which Rama is worshiped as the supreme god. Its capital subject is the Rama story. Text and translation were published by Weber in 1864.

Ramayana (rā-mā'ya-na). [*Rāma-ayana*, the goings or doings of Rama.] One of the two great epics of India, the other being the Mahabharata. It is ascribed to a poet Valmiki, and consists at present of about 24,000 stanzas, divided into seven books. The first production of one man, though many parts are later additions, such as those in which Rama is represented as an incarnation of Vishnu, all the rest being the first book, and the whole of the seventh. It was at first handed down orally, and variously modified in transmission, as afterward when reduced to writing: hence the number of distinct recensions, agreeing for the most part as to contents, but following a different arrangement or varying throughout in expression. One belongs to Benares and the northwest; another, generally more diffuse and open to suspicion of interpolations, to Calcutta and Bengal proper; a third to Bombay and western India; while Weber has found among the manuscripts of the Berlin Library what seems to be a fourth. Weber has sought to show ("Ueber das Ramayana," 1870) that the modifications of the story of Rama in its earliest shape, as contained in Buddhistic legends, show Valmiki's acquaintance with the Trojan cycle of legend. He dates the composition of the present Ramayana at a time toward the beginning of the Christian era, when Greek influence had begun. In 1806 and 1810 Carey and Marshman published at Serampore the text and translation of 2 books in the Bengal recension; in 1829–38 A. W. von Schlegel at Bonn 2 of the northern with Latin translation; in 1843–1870 the Italian Gorresio at Paris the complete text of the Bengali recension with Italian translation. Two complete editions of the text appeared in 1859 in India, one at Bombay, the other at Calcutta. There is a French translation by Fauche, following Gorresio's text, and an English translation by Griffiths (Benares, 1870–74), following the Bombay edition.

Rameses (ram'e-sēz) **I.,** or **Ramses** (ram'sēz). [Nl., *Rameses, Ramses,* L. *Ramises, Rhamises, Rhamses,* Gr. *Ῥαμσῆς,* more commonly *Ῥαμέσσης, Ῥαμεσσῆς,* rarely *Ῥαμέσσης.*] An Egyptian king, the founder of the 19th dynasty (about 1400 B. C.). A memorial stone of the second year of his reign has been found at the second cataract at Wady Halfa.

Rameses II., or **Ramses: Miamun I.** One of the most famous of Egyptian kings, the third of the 19th dynasty (1333 B. C.), son of Seti I. He was a great and successful warrior. His most notable campaign was one against the Hittites; and the great battle of Kadesh, in which he was saved by his personal valor, is described in the epic poem of Pentaur. (See *Pentaur.*) His mummy was found at Deir-el-Bahari in 1881. Also called *Sesostris, Sesoösis, Sethosis,* and by the Greeks *Sesostres.*

Here [Tanis, San] also Mr. Petrie discovered the remains of the largest colossus ever sculptured by the hand of man. This huge figure represented Rameses II. in that position known as "the hieratic attitude"; that is to say, with the arms pressed to the sides, and the left foot advanced in the act of walking. It had been cut up by Osorkon II., of the Twenty-second Dynasty, to build a pylon gateway: and it was from the fallen blocks of this gateway that Mr. Petrie recognized what it had originally been. Among these fragments were found an ear, part of a foot, pieces of an arm, part of the pilaster which supported the statue up the back, and part of the head-dress, on which are carved royal ovals. *Ez pede Herculem.* These fragments (mere chips of a few tons each), although they represent but a very small portion of the whole, enabled Mr. Petrie to measure, describe, and weigh the shattered giant with absolute certainty. He proved to have been the most stupendous colossus known. Those statues which approach nearest to him in size are the colossi of Abu-Simbel, the torso of the Ramesseum, and the colossi of the Plain. These, however, are all seated figures, and, with the exception of the torso, are executed in comparatively poor materials. But the Rameses of Tanis was not only sculptured in the obdurate red granite of Assuan, and designed upon a larger scale than any of these, but he stood erect and crowned, ninety-two feet high from top to toe, or one hundred and twenty-five feet high including his pedestal. *Edwards,* Pharaohs, Fellahs, etc., p. 55.

Ramesseum (ram-es-sē'um), commonly, but erroneously, called the **Memnonium** (mem-nō'ni-um). A splendid monument built by Rameses II. at Thebes in Egypt. The entrance, between two great pyramidal towers, opens on a court about 200 feet square, which had on each side a double range of columns. The second court, a little smaller, has Osiride pillars in front and rear, and double ranges of columns on the sides. From the rear portion is entered the splendid hypostyle hall, which has 8 ranges of 6 columns, forming 9 aisles. The columns of the central aisle, 32½ feet high and over 21 in circumference, are the largest, and still support part of the lintels of the roof. The capitals are of the spreading bell-form. Beyond the hypostyle hall were 9 chambers in 3 rows, the first two of the central row columned. Among the sculptures the colossal seated figure of Rameses in the outer court, now shattered, should be mentioned as by far the largest statue in Egypt: its weight is computed at 1,000 tons. The reliefs, among which are illustrations of the Asiatic campaigns of Rameses II., are of the highest interest.

The interior consists of eight lines running, two rectangles, one within the other, but not connecting, and crossed by galleries connecting the four gopuras. In the center is the small shrine, with a gilt ball and spire. The corridors are about 20 feet wide and high, and those on the sides are closed in. The pillars are of the plain order, the slabs composed pier-on-continuous-slab, with basket-shaped capitals supporting an ornamented cornice. The piers are sculptured with arabesque designs of remarkable variety and richness. The construction is assigned to the 17th century.

He studied under his father, Giovanni Santi, and after about 1499 under Perugino in Perugia, whose style he imitated for many years. He assisted in the decoration of the Sala del Cambio there. His first great work, still in the style of

From 1503 to 1504 he painted a series of pictures for the Città di Castello, chief of which is the "Marriage of the Virgin," or "Sposalizio," in the museum at Brera. In 1504 he established himself in Florence, but worked also at Perugia and Siena. To this period belongs the St. George of the Louvre. The palace of Theodoric, a fragment 65 feet long, with two tiers of arcades, a large arched doorway in the middle, and over it a large domed niche containing a double-arched window, is important historically as the abode of Theodoric, the exarchs, and the Lombard kings, and architecturally as one of the best secular examples of early Italian Romanesque. The mausoleum of Theodoric, of the 6th century, though Roman in character, is in plan a decagon 45 feet in diameter. The upper story, 35 feet in diameter, is circular, roofed by a single enormous slab cut to the form of a flat dome. This story was surrounded by ornamental arcades, now gone. Each side of the decagon below has a niche formed by a massive arch. Each story contains a chamber: the lower one is cruciform. The mausoleum of Galla Placidia, built in 440, is in plan a Latin cross 40 by 46 feet. The four arms have barrel-vaults, and the central space is covered by a raised-groined vault. The ends of the arms are occupied by sarcophagi. The vaults are lined with mosaics which rank among the finest remains of early Christian art. Among other notable structures are the baptistery, Dante's tomb, library, archiepiscopal palace, and churches of San Vitale, San Nazario e Celso, santa Maria in Cosmedin, San Apollinare Nuovo, and San Apollinare in Classe. Reformation (ref-ō-mā'shon), **The.** The great religious revolution of the 16th century, which led to the establishment of the Protestant churches. The Reformation assumed different aspects, and resulted in alterations of discipline or doctrine more or less fundamental in different countries and in different stages of its progress. Various pioneers of great importance, as Wyclif and Huss, had appeared before the 16th century, but the Reformation proper began nearly simultaneously in Germany under the lead of Luther and in Switzerland under the lead of Zwingli. The chief points urged by the Reformers were the need of justification by faith; the use and authority of the Scriptures, and the right of private judgment in their interpretation; and the abandonment of the doctrine of transubstantiation, the adoration of the Virgin Mary and saints, the supremacy of the Pope, and the other doctrines and practices regarded by the Reformers as unscriptural. In the German Reformation the leading incidents were the publication at Wittenberg of Luther's thirty-five theses against indulgences in 1517; the excommunication of Luther in 1520; his testimony before the Diet of Worms in 1521; the spread of the principles in many of the German states, as Hesse, Saxony, and Brandenburg, and the opposition to them by the emperor in the Diet and Confession of Augsburg in 1530; and the prolonged struggle between the Protestants and the Catholics, ending with substantial religious equality in the Peace of Passau in 1552. The Reformation spread in Switzerland under Zwingli and Calvin, in France, Hungary, Bohemia, the Scandinavian countries, the Low Countries, etc. In Scotland it was introduced by Knox about 1560. In England it led in the reign of Henry VIII. to the abolition of the papal supremacy and the liberation from papal control of the Church of England, which, after a short Roman Catholic reaction under Mary, was firmly established under Elizabeth. In many countries the Reformation occasioned an increased zeal in the Roman Catholic Church, sometimes called the Counter-Reformation.

Reform Bill. In English history, a bill for the purpose of enlarging the number of voters in elections for members of the House of Commons, and of removing inequalities in representation. The first of these bills, passed in 1832 by the Liberals after a violent struggle (often called specifically the Reform Bill), disfranchised many rotten boroughs, gave increased representation to the large towns, and enlarged the number of the holders of county and borough franchise. The effect of this Reform Bill was increased by the Conservatives under Liberal pressure in 1867, was in the direction of a more democratic representation, and the same tendency was shown in the Franchise Bill passed by the Liberals in 1884.

This measure [The Reform Bill of 1832] disfranchised fifty-six nomination boroughs which returned 111 members, took away one member from thirty others, and two from Weymouth and Melcombe Regis, thus leaving vacant 143 seats. It gave sixty-five additional members to the counties, two members each to Manchester, Leeds, Birmingham, and nineteen large towns, including the metropolitan districts, and one member each to twenty-one other towns, all of which had been previously unrepresented. In the counties copyholders and leaseholders for years were added as voters to the 40s. freeholders, and tenants at will paying £50 a year (the Chandos clause) were enfranchised. In the towns a £10 household franchise was established, and the rights of freemen to vote were restricted.

Reform War. [Sp., *Guerra de la Reforma.*] A civil war in Mexico, 1857–61. It arose out of the adoption (Feb. 5, 1857) of the present constitution of Mexico, which greatly restricted the power of the clergy. This, and some acts of President Comonfort which were regarded as hostile to the church, led to a reaction and the deposition of Comonfort (Jan. 21, 1858). His legal successor, Juarez, established a government at Vera Cruz (May 4, 1858), and this became the focus of the "liberal," "reform," or "constitutional" party. The reactionists made Zuloaga president of Mexico, but he was deposed on Dec. 23, 1858, and General Miramon, their principal military leader, took his place. The government of Juarez was recognized by the United States, greatly strengthening his cause. On July 12, 1859, he issued his famous decree confiscating church property, and thus increasing the breach. The war, on the side of Juarez, was generally carried on by his generals, but Miramon often commanded his own forces. The movements and counter-movements were confusing to the last degree, and during the whole period the interior was in a state of anarchy, the prey of guerilla parties. Some of the chief events were: Reactionist victory at Salamanca in Guanajuato, March 9-10, 1858, followed by the surrender of the liberals under Parredi at Guadalajara; Miramon and Mejia overrun San Luis Potosi Sept. 12, and defeat Vidaurri at Ahualulco Sept. 29; siege of Guadalajara by the liberals Sept. 28 until its capture, Oct. 27; Guadalajara retaken by Marquez, Dec. 29; first siege of Vera Cruz by Miramon, ending in his repulse, March 29, 1859; liberals defeated at Tacubaya, April 11; execution of prisoners (called the "massacre of Tacubaya"), April 12; United States vessels capture as pirates Miramon's ships which had attempted to attack Vera Cruz, March 6, 1860; abandonment of second siege of Vera Cruz, March 21; liberals repulsed from Guadalajara, May 25; Miramon defeated on the Salsa Hill, Aug. 10; liberals defeated at Toluca, Dec. 9; final defeat of Miramon at Calpulalpan, Dec. 22; Miramon resigns and secretly leaves the city, Dec. 24; entry of Juarez into Mexico, Jan. 11, 1861. The confusion did not entirely cease with Miramon's defeat, and it eventually opened the way to the French intervention and the short-lived empire of Maximilian.

After 1696 he composed a number of short plays in verse, and in 1708 he finally returned, on the stage, to comedy, in verse, that ranks immediately next to Molière. "Le joueur," the earliest displayed originality of this talent in "Le distrait" (1697), "Le menteur" (1700), "Les folies amoureuses" (1704), "Les Ménechmes" (1705), and "Le légataire universel" (1708). As a writer, Regnier is well known for his satires. He is at his best in "Le gout réformé" and "Le mauvais gout," and in "Le pouvoir qu'on se peut donner de bien parler après cette homme," "La folie est générale," "Ny crainte ny esperance," "Le mauvais repas," and "Le mauvais lieu." Rephaim (ref'ā-im or re-fā'im). In Old Testament history, a race of giants, the ancient inhabitants of Palestine and of the land east of the Jordan.

The Rephaim, who are mentioned along with the Perizzites, are more difficult to determine. The name is translated Giants' in the authorized Version of the Bible, but the only support for this is the gigantic size of the Amorite Anakim in the Philistine cities, who are said to have been the descendants of Rapha (2 Sam. xxi. 16–22). The size of the sarcophagus of Og, the king of the Rephaim in Bashan (Deut. iii. 11), proves nothing as to the size of the king himself. There are traces of the Rephaim in several parts of the Holy Land. On the southwestern side of Jerusalem itself was a "valley of the Rephaim" (Josh. xv. 8, etc.), where was a Beth-Rapha or "House of Rapha" in Southern Judah (1 Chr. ii. 51), and the Emim, Zamzummim, who preceded the Moabites and Ammonites, were also reckoned among the Rephaim (Deut. ii. 11, 20).

It was composed of Freesoilers, of antislavery Whigs, and of some Democrats (who suddenly formed the group known as Anti-Nebraska men), and was joined by the abolitionists, and eventually by many Know-nothings. During the period of the Civil War many war Democrats acted with it. It first nominated a candidate for President in 1856. In 1860 it elected its candidate for speaker of the House of Representatives, and in 1861 it gained control of the executive and both houses of Congress. The presidents from 1861 to 1885, Lincoln, Johnson, Grant, Hayes, Garfield, and Arthur, were Republicans, though Johnson was at outset in harmony with the party in Congress. The Republicans held the power in Congress until 1875; they then lost the House, regained it in 1881, lost it in 1883, again regained it in 1889, and lost it again in 1891. The Senate however, they continued to hold, except for 1881–83, until 1886, when the executive and both branches of Congress passed into the hands of the Democrats. The party favors generally a strong construction of the Constitution, liberal expenditures, extension of the powers of the national government, and a high protective tariff. On Sept. 17, 1855, Captain Buddington, in the American whaler George Henry, met the deserted Resolute in sound condition about 40 miles from Cape Mercy. A much more remarkable name is that of Restif de la Bretonne, who has been called, and not without reason, the French Defoe. He was born at Sacy in Burgundy in 1734, and died at Paris in 1806. Although of very humble birth, he seems to have acquired an irregular but considerable education, and, establishing himself early in Paris, he became an indefatigable author. Some fifty separate works of his exist, some of which are of great extent, and one of which, "Les Contemporaines," includes forty-two volumes and nearly three hundred separate articles or tales. Restif, whose entire sanity may reasonably be doubted, was a novelist, a philosopher, a social innovator, a diligent observer of the manners of his times, a spelling reformer. His work is for the most part destitute of the most rudimentary notions of decency, but it is produced in good faith and evidently with no evil purpose.

He received his education at the hands of St. Vincent de Paul, and thereafter at the Jesuit College of Clermont. From earliest childhood he was intended for the church, where he was to become eventually archbishop of Paris, a dignity that had long been held in his family; but by his stormy conduct he came near foiling all plans and interests. After a trip to Italy, he settled down in Paris, keeping the archiepiscopal seat well present in his mind. A strong desire on his part to become a political leader led him to take an active part in the movement against Cardinal Mazarin (1648–49). He obtained at last the removal of that statesman, and rose himself to the dignity of cardinal. But his popularity was short-lived, and he was finally imprisoned at Vincennes (1652). He made good his escape, and traveled in foreign countries until the time of Mazarin's death. Then he returned to France. He resigned the archbishopric, which in the meantime had fallen to his lot through his uncle's death, and retired shortly after to private life in Lorraine. Here he wrote his "Mémoires," which are of great value in the history of the times and doings of his day. They are included in the collection of the "Mémoires sur l'Histoire de France." The best edition is the one made by M. Feillet in the "Collection des Principaux Mémoires de l'Histoire de France" (1872). At first he employed a simple enamel and white figures with blue draperies and no ornamental accessories in the background. He and his family increased and improved the manufacture, and carried them into the work and the practice of their figures. The first basso-rilievo in Robbia ware is three of the Resurrection and Ascension in the Cathedral of Florence, leading into the sacristy of the Duomo. The earliest memorials of the first Luca are his medallions to be inserted into the sides of Ghiberti's Campanile (1437–39), and his finished reliefs of the prophets Habakkuk and Jeremiah, Peter. He made the well-known reliefs of singing boys for the screen of one of the organ lofts of the cathedral (1431–38). To 1438 belong the bronze doors of the sacristy of the Duomo. It is difficult to distinguish the works from those of Andrea and his four sons, Giovanni, Luca II., Ambrogio, and Girolamo. Among the most remarkable of these which may be attributed to Luca are those of Luca and Andrea are the altarpiece in the Church of the Osservanza near Siena (which represents the Coronation of the Virgin), a bas-relief over the door of the Church of Impruneta, Perano, the Via di Terra Vecchia in Florence, the ceiling of the Chapel of San Miniato, some of the medallions on the outer side of the San Paolo Loggia in Florence, and the Annunciation in the cloister of the Innocents Hospital in Florence a Madonna with two saints in the Uccelli Sacristy, a Coronation of the Virgin and other Madonnas in the Campo di Pisa, and a fountain in the sacristy of Santa Maria Novella. He ascended the throne about 710, and was overthrown and probably slain by the Saracens under Tarik in 711. According to legend he violated Florinda or Cava, daughter of Count Julian of Ceuta, whose father avenged her dishonor by calling in the Saracens. Roderick was overcome in a seven days' fight, and fled to the mountains, where he became a hermit.

The fate of Roderick has remained a mystery to this day. His horse and sandals were found on the river bank the day after the battle, but his body was not with them. Doubtless he was drowned and washed out to the great ocean. But the Spaniards would not believe this. They clothed the dead king with a holy mystery which assuredly did not enfold him when alive. They made the last of the Goths into a legendary saviour like King Arthur, and believed that he would one day rise from his resting-place in some ocean isle, headed of his wound, to lead the Christians once more against the infidels. In the Spanish legends, Roderick spent the rest of his life in pious acts of penance, and was slowly devoured by snakes in punishment for the sins he had committed, until at last his crime was washed out, "the body's pang had spared the spirit's pain," and "Don Rodrigo" was suffered to depart to the peaceful isle, whence his countrymen long awaited his triumphant return. *Poole*, Story of the Moors, p. 21.

Roger of Hoveden (roj'ėr ov huv'den or hov'den). Lived in the last half of the 12th century. The author of a chronicle of England, first printed in 1596. He was a clerk and a member of the royal household of Henry II., and seems to have been well versed in the law. He served the king in various diplomatic and public affairs, and on Henry's death he probably retired to the collegiate church of Hoveden (Howden or Howden), in the East Riding of Yorkshire, and wrote his chronicle.

Roger of Hoveden's Chronicle was based first upon a compilation made probably at Durham between the years 1148 and 1161, and known as the "Historia Saxonum vel Anglorum prior Hagustaldensis." This chronicle was compiled from the histories of Simeon of Durham and Henry of Huntingdon. Roger of Hoveden added to this an account of the reign of Edward the Confessor; an abstract of a charter of William the Conqueror granting Hemingburgh and Brackenholm to Durham; a copy of a charter by which Thomas I., archbishop of York, released Durham churches in his diocese from customary payments to the Archbishop; a list in French of warriors at the siege of Nice; and about eight other additions. The part of Hoveden's Chronicle which extends from 1148 to 1170 is not founded upon any written authority except the chronicle of Melrose. . . . The Melrose chronicle was based upon Simeon of Durham until the year 1221, and was then continued until 1169 with contemporary record. Between 1163 and 1169 Roger of Hoveden draws largely from the lives of Becket in the record of his quarrel with the king. . . . From 1169 to the spring of 1192 Roger of Hoveden's Chronicle embodies, with occasional divergence, and addition of documents, chiefly northern, that of Benedict of Peterborough; and from 1192 to 1201, at which date the chronicle ends, the addition of documents especially relating to the north of England becomes a marked feature of the work. This is the part of the chronicle in which Roger of Hoveden is historian of his own time, and his work is of the highest value. The reputation of the chronicle was in its own time so good that Edward I. is said to have caused diligent search to be made for copies of it in the year 1291, in order that on its evidence he might adjust the disputes as to homage due to him from the Crown of Scotland.

Rudland*, *Ruland*, *Roland*, having a famous land.] In medieval romance, the most celebrated of the paladins of Charlemagne, famous for his prowess and death in the battle of Roncesvalles in 778. His deeds were first recorded in Turpin's chronicle and in the "Chanson de Roland," also in the works of Pulci, Boiardo, and Ariosto. He had a wonderful horn called Olivant, which he won, together with the sword Durandal (Durindana), from the giant Famagus. The horn might be heard at the distance of twenty miles. There are numerous legends concerning Roland. He once fought for five days with Oliver or Oliver, son of Reginier, duke of Genoa, another of Charlemagne's paladins. They had previously known each other, and were nearly equally matched. Neither gained the advantage; hence the phrase "parler a Roland for an Oliver," *i. e.* a blow for a blow. "Childe Roland (Rowland) to the Dark Tower came," a poem by Robert Browning, is, according to his own statement, simply a dramatic creation, set forth by the line sung by Edgar in "King Lear" iii. 4.

Roman de la Rose (rō-mon' dē la rōz). [F., 'Romance of the Rose.'] An early French poem, begun by Guillaume de Lorris before 1260, and continued forty or fifty years later by Jean de Meung. The part written by the former extends to 4,670 lines, and the entire poem contains more than 20,000. It is an elaborate allegory the theme of which is the art of love. For a long time it enjoyed extraordinary popularity. See *Romaunt of the Rose*.

But the real secret of its vogue, as of all such vogues, is that it faithfully held up the mirror to the later middle ages. In no single book can that period of history be so conveniently studied. Its ingrained religion and its nascent freethought; its thirst for knowledge and its lack of criticism; its sharp social divisions and its indistinct aspirations after liberty and equality; its traditional morality and asceticism, and its half-pagan half-childish relish for the pleasure of sense; its romance and its coarseness, all its weakness and all its strength.

Roman de Troie (rō-mon' dē trwä). A poem by Benoist de Sainte-Maure, written about 1160.

The principal poem of this class is the "Roman de Troie" of Benoist de Sainte-More. This work, which extends to more than thirty thousand verses, has the redundancy and the longwindedness which characterise many, if not most, early French poems written in its metre. But it has one merit which ought to conciliate English readers to Benoist: it contains the undoubted original of Shakespeare's "Cressida."

Rome. [F. *Rome*, It. *Roma*, G. *Rom*, L. *Roma*, Gr. *Ῥώμη*. There were two other, older, cities in Italy so named, and one in the Troad; the name is prob. lit. 'strength' or 'stronghold,' from Gr. *ῥώμη*, strength, force. The name *Valentia*, 'strength,' was, in fact, also applied to Rome, and was the name of several other cities.] The capital and center of the greatest state of the ancient world, the center of the Roman Catholic Church, and the capital of the present kingdom of Italy. This, the most famous of all cities, is situated on both banks of the Tiber, 15 miles from the Mediterranean, in lat. 41° 54′ N., long. 12° 29′ E. The city proper is on the left bank, on the original seven hills (Capitoline, Palatine, Aventine, Celian, Viminal, Esquiline, and Quirinal) and on the commanding terrace and plains near the river. The government quarter is in the northeast; the modern part, where the great development (since 1870) of the city is most marked, is in the north and east; the papal quarter (the Leonine City) is on the right bank of the river. Among the existing remains of the ancient city the Forum, Colosseum, Forum of Trajan, Cloaca Maxima, catacombs, Pantheon, column of Marcus Aurelius, theater of Marcellus, pyramid of Cestius, arches of Constantine, Titus, and Septimius Severus, baths of Titus and Caracalla, ruins on the Palatine, temples of Vesta, basilica of Constantine, temples of Concord, Fortune, Saturn, and Neptune, palace of Caligula, mausoleum of Hadrian, and obelisks are notable. (For the various objects of interest in ancient and modern Rome see the separate articles.) The history of Rome is that of the city and of the power which, growing up around it, extended throughout Italy and beyond it under the name and the influence of the Roman Empire, comprised nearly the whole of the civilized world. The early accounts we have of Rome appear to consist of an undistinguishable thread mingled with a mass of legend, according to tradition the city was founded by Romulus in 753 B. C., and was ruled by seven kings in succession (Romulus, Numa Pompilius, Tullus Hostilius, Ancus Martius, Tarquinius Priscus, Servius Tullius, and Tarquinius Superbus), the overthrow of the last of whom led to the establishment of the republic in or about 509 B. C. The history of the first two or three centuries of the republic is also largely traditional. During the 5th and 4th centuries B. C. it was confined mostly to Latium, and was occupied with the struggles between the patricians and plebeians and with wars against the Æqui, Hernici, Volsci, Etruscans, Gauls, and Samnites. Of later events the following is a summary: Secession of the plebs and formation of the tribunate, about 494 B. C.; formation of the decemvirate, 451–449; capture of Veii, 396; invasion of the Gauls and sack of Rome, 390; passage of the Licinian laws, 367; passage of the Publilian laws, 339; Samnite wars, 343–341, 326–304, and 298–290; Latin war 340–338; Hortensian law, 286 (?); war against Gauls, Etruscans, etc., 285–282; war against Tarentum, Pyrrhus, 282–272; conquest of the peninsula completed by 266; first Punic war, 264–241; Illyrian war, 229–228; conquest of Cisalpine Gaul, 225–222; second Punic war, 218–201 (Rome threatened by Hannibal, 218); Macedonian wars, 215–205, 200–197, and 171–168; war with Syria, 192–189; third Punic war, 149–146; subjugation of Greece complete, 146; war in Spain ended with capture of Numantia, 133; attempted reforms under the Gracchi, 133–121; war with Jugurtha terminated, 105; overthrow of the Teutones and Cimbri, 102–101; Social War, 90–88; civil wars of Marius and Sulla, 88–82; Athens stormed by Sulla, 88; reign of terror in the city under Marius and Carbo, 87; proscription by Sulla, 82); Mithridatic wars, 88–84, 83–81, and 74–64; struggle with the gladiators, 73–71; war with the pirates, ended 67; conspiracy of Catiline, 65–62; first triumvirate, 60; conquest of Gaul under Julius Cæsar, 58–51; tumults in the city between the partisans of Clodius and Milo, 57–52; civil war of Cæsar and Pompey, 49–48; supremacy of Cæsar, 49–44; assassination of Cæsar, 44; second triumvirate, 43; overthrow of the conspirators at Philippi, 42; Perusian war, 41; Actium, 31, and commencement of the sole rule of Augustus: establishment of the Roman Empire, 27; golden period of Roman literature during the reign of Augustus, 31 B. Population (1890), 449,000.

It is not surprising that from the same somewhat vague premises the following very different conclusions are drawn by their respective authors: Bunsen fixes the population at the time of Servius (B. C. 19) at 1,900,000; Marquardt at 1,030,000, Zumpt at 1,970,000, Hoeck at 2,265,000. I take this comparison of their different results from Von Ward's edition of Bunsen, making the total population of the city 1,350,000. The "Curiosum Urbis," a description of the city of Rome ascribed to the reign of Constantine, gives the number of the dwellings therein as 1790 Domus and 46,602 Insulæ. Scholars are generally agreed that the former are the great self-contained mansions of the rich, and the latter the tall tenements of the Aventine and the populous poorer city left out in its and rooms to the poorer classes. From this number of dwellings Gibbon infers a population of 1,200,000 souls; to one more than twice the maximum of the fourth century. It is obvious, however, how exceedingly liable to error are all calculations of the population of a city from conjectural allowance of so many inhabitants to each house.

Hodgkin, Italy and her Invaders, I. 324.

For ages the Empire remained from the fullest sense, Roman even in keeping possession of the Old Rome. It was Byzantine to one more than to the ancient capital of the older Roman power. From the first Julius to the last Paleologus, the Roman Empire was a power and not a nation. It was the phase of the Roman power is this more true than of its Eastern or Byzantine period. Even the emperors, in the use of Procopius, when it does not refer geographically to the older Rome, means any man, of whatever race, who is in actual fact the Roman emperor who serves in the Roman armies. His nationality may be not only Greek, Macedonian, or Thracian, but Gothic, Persian, or Hunnish. *Freeman*, Hist. Essays, III. 246.

Romeo and Juliet. A tragedy by Shakspere, surreptitiously printed in 1597 (a correct edition in 1599), and probably written in 1596. The legend of which it is founded, on a fact of the period, the "Novelle" of Masuccio di Salerno, of whom little is known. It was printed at Naples in 1476. The story next appears in Bandello's "Novelle" (called Bandello Parte, in 1553 by a Dominican monk, Matteo Bandello, took up the tale, rehandled it, and included it among his somewhat unclerical 'Novelle,' which appeared at Lucca in 1554. Five years later it passed into French prose, and set forth to a 'Novelle,' with variations and additions, being given to French readers by Pierre Boaistuau among his 'Histoires Tragiques.' In 1562 Arthur Brooke translated the English poem, 'The Tragicall History of Romeus and Juliet,' on which Shakspere founded his tragedy. Brooke speaks of having 'overseen and corrected' a play set forth on stage; to such drama of early Elizabethan days survives; rude indeed must have been the attempt of any playwright in England of 1562. Again five years, and Boaistuau's French paraphrase of Bandello was translated into English prose by William Painter for his 'Palace of Pleasure'; this also Shakspere consulted. In Italy before the close of the century the legend had been dramatized in ottava rima, professedly by a noble lady of Verona naming herself 'Clitia'—really, it is supposed, by Gherardo Boldieri; in Spanish, Antonio Diaz, a Portuguese Jew, and for Luigi Groto, with scene and time and names of persons changed: it had been rendered as grave matter of history by De la Corte, who states that he had many times seen the tomb or sarcophagus of the lovers. It was used as a washing-trough, at the well of the orphanage of St. Francis" (*Dowden*). Garrick produced a version of "Romeo and Juliet" in 1748, with a different ending, for Barry and Mrs. Cibber; James Howard's adaptation appeared about 1668. Lope de Vega and Francisco de Rojas also wrote Spanish plays on the subject. The story is of the love and tragic death of two impassioned lovers. The subject has often been used by composers of opera, notably by Zingarelli, Bellini, and Gounod. Berlioz used the subject for his dramatic fifth symphony ("Romeo et Juliette," 1839).

He spent also a couple of years in the service of James V. of Scotland, and then returned to his former post, and was at this time introduced to the royal children. On his final return to France in 1542, he lost his sense of hearing in consequence of a severe illness. This infirmity compelled him to give up the life of a courtier, and led him to turn all his attention to literary labors. Together with his friend Baif he took up a course of study that extended over 7 years (1547-54) and under Dorat (an excellent Greek scholar. The ultimate end he had in view was to regenerate his native tongue, and demonstrate in his own works that the French language was capable of as much power and nobility of expression as that of Italy, combined with grace and refinement. About 1552 he began to publish his poetical works: "Odes," "Sonnets at Cassandre," "Le bocage," "Les Amours," etc. His reputation was attained in his "Hymnes" (1555-56), and he became a great favorite with Charles IX., king of France from 1560 to 1574. On the death of his royal patron, Ronsard was gradually relegated to the background: finally he left the court in utter disappointment. The last years of his life (1574-85) were spent in quiet and seclusion at the priory of St.-Côme. Ronsard was the father of lyric poetry in France. For services he was created by the Gauchos, and Borrego (1827) made him commander of the rural militia. By the deposition and death of Borrego (Dec., 1828), Rosas became chief of the federalist party, which aimed at securing the practical independence of the provinces. After some months of fighting, the unitarian chief, Lavalle, resigned, and Rosas was governor of Buenos Ayres (Dec., 1829–Dec., 1832). His successor, Balcarce, was deposed by a resolution instigated by Rosas's wife; and Rosas was again elected governor with extraordinary powers (March 7, 1835). From this time, by successive reelections, he governed as an absolute dictator until his fall, and often with tyrannical cruelty. The press was muzzled, commerce was restricted, and hundreds of his political opponents were driven into exile or assassinated. Some of the provinces formed a loose alliance with Buenos Ayres, and Rosas managed to put his creatures in charge of most of the others: Lopez, for a time, he practically ruled them all, though nominally he was only governor of Buenos Ayres. One of his great ambitions was to subject Montevideo, which had become a refuge for exiles from Buenos Ayres and a center of the unitarian party; to this end he joined with the exiled president, Oribe, who, thus aided, held most of the interior of Uruguay from 1842 to 1851, though the city was never taken. (See *Oribe.*) Owing to Rosas's persecution of French residents, a French fleet blockaded Buenos Ayres during most of the time from 1838 to 1845. In the latter year France and England interfered to protect Montevideo, and their combined fleets attacked and took the intrenched camp of Rosas at Punta de Obligado (Nov. 20), but nothing further came of the matter. The unitarians made many armed attempts to depose Rosas, the most formidable being that commanded by Lavalle (1838–41), but all failed. At length (1851) Brazil interfered to protect the independence of Uruguay, uniting with Urquiza, governor of Entre Ríos. They were joined by Corrientes, and later by other provinces. The combined forces, under Urquiza, eventually defeated the army of Rosas at Monte Caseros, near Buenos Ayres (Feb. 3, 1852). Rosas fled to England, where he lived in retirement until his death.

These remaining tribes are the Mamoya, Mashukulumbwe, Matabele, Manchwia, Mambunda, and Mabunda. Wars, long since ceased, were popular. Nowadays no Lobale, Akalonga, and Lewanika. The Barotse kingdom is in the Batoka-plateau of influence, but was still independent in 1890.

Rougé (rö-zhā'), Vicomte **Olivier Charles Camille Emanuel de.** Born at Paris, April 11, 1811: died at his Château Bois-Dauphin, Dec. 31, 1872. A celebrated French Egyptologist, professor of archæology at the Collège de France. He is well known from his discovery of the principles of the Semitic alphabet in the cuneiform hieratic.

The entire glory of this discovery is due to the genius of a French Egyptologist, Emanuel de Rouge. The first account of his investigations was given in a paper read before the Académie des Inscriptions in May, 1849. A meagre summary of his results was published at the time in the "Comptes rendus," but by some mischance the MS. itself was lost, and has never been recovered. M. de Rouge's intention of rewriting the whole essay was unfortunately never carried out. After his death the rough draft of the original memoir was found among his papers, and, at last, after a delay of fifteen years, was edited, completed, and given to the world by the filial piety of M. Jacques de Rouge, the worthy son of a worthy father. This epoch-making work (the first attempt to treat the problem in the modern scientific method — may be said to have made possible, at last, a History of the Alphabet.

Roundheads (round'hedz). In English history, the members of the Parliamentarian or Puritan party during the civil war. They were so called opprobriously by the Royalists or Cavaliers, in allusion to the Puritans' custom of wearing their hair cropped close, while the Cavaliers usually wore theirs in ringlets. The Roundheads were one of the two great parties in English politics first formed about 1641, and continued under the successive names of Whigs and Liberals, as opposed to the Cavaliers, Tories, and Conservatives respectively.

Round Table, The. In Arthurian legend, a table made by Merlin for Uther Pendragon, who gave it to the father of Guinevere, from whom Arthur received it with 100 knights as a wedding gift. The table would seat 150 knights. One seat was called the siege or seat perilous because it was death to any knight to sit upon it unless he were the knight whose achievement of the Holy Grail was certain. The Order of the Round Table was an institution founded by King Arthur at the advice of Merlin. It was originally military, but it ultimately became a military and theocratic organization. The romances of the grail and of the Round Table are closely connected. There were legends of the latter before 1155, but between 1155 and 1200 several books were collected called "Romances of the Round Table." Among the poetic and prose compositions belonging to this cycle are "Parzifal und Titurel" (German), "Percevall" (French and English), "Merlin" (English and French), "Lancelot du Lac" (French), "Tristan" (French), "Life of Merlin" (French and English), "Quest of the Holy Grail" (French and English), "Percevaus" (French), "Melhadus," and "Gawain Carlois" (French).

His pictures were principally interiors and architectural views, and under the direction of Lebrun he decorated all the royal residences. After a period of study in Italy, he decorated many public buildings and a number of apartments and chateaux at Marly, at Meudon, and at Versailles. He went to London to decorate one of the houses of Lord Montague, but died before completing it.

Rousseau, Jean Baptiste. Born at Paris, April 15, 1670: died at Brussels, March 17, 1741. A French poet. He was exiled from France in 1712 on the charge of writing satirical verses on certain influential persons. He engaged in controversies with Voltaire and others.

The first poet who is distinctively of the 18th century, and not the least remarkable, was Jean Baptiste Rousseau (1669-1741). Rousseau's life was a singular and rather an unfortunate one. In the first place, he was exiled for a piece of scandalous literature of which in all probability he was quite guiltless; and, in the second, meeting in his exile with Voltaire, who professed (and certainly may have felt) admiration for him, he offended the irritable disciple and was long the butt of his attacks.

Saintsbury, French Lit., p. 294.

Rousseau, Jean Jacques. Born at Geneva, June 28, 1712: died at Ermenonville, near Paris, July 2, 1778. An eminent Swiss-French philosopher. His mother died in giving him birth, and his father, a man of selfish and careless nature, spent his time mending watches and reading dancing as a means of livelihood. For education Jean Jacques read Plutarch and some novels. He was successively an engraver's apprentice, a hackey, a musician, a student in a seminary, a clerk, a private tutor, and a man-of-pleasure. He changed his religion repeatedly, even on pecuniary inducements. He lived thus from hand to mouth until the age of 38, and the only time that he knew no need was during the years spent with the notorious Madame de Warens. His first real awakening to his latent talents dates from the summer of 1749, when he undertook to compete for a prize offered by the Academy of Dijon for the best dissertation on the subject "Whether the progress of the sciences and of letters has tended to corrupt or to elevate morals." So eloquent was he in his paradoxical condemnation of civilization, that he achieved at once a brilliant success. The following years witnessed a series of literary triumphs, such as "Le devin de village" (1752), "Discours sur l'inegalite des conditions" (1754), "Lettre sur les spectacles" (1758), "La nouvelle Heloise" (1761), "Le contrat social" (1762), and "Emile, ou de l'éducation" (1762). The ideas expressed in this last work led to Rousseau's exile from France, and laid the foundation of modern pedagogy. He lived in Switzerland and England until he was allowed to come back, in 1767, on condition that he would not write any more. And in fact his last works of consequence, "Les confessions" and "Reveries d'un promeneur solitaire," were not published until 1782, 4 years after his death. Rousseau's life is an enigma: he lived with a woman unworthy of him, Thérèse Le Vasseur, who bore to him 5 children, whom he sent one after the other to the Foundling Asylum. He died of apoplexy after having been for many years a victim to the mania of persecution.

Rousseau, Lovell Harrison. Born in Lincoln County, Ky., Aug. 4, 1818: died at New Orleans, Jan. 7, 1869. An American general and politician. A noted French landscape-painter, one of the leaders of the French realistic school, known as the school of Fontainebleau. His father was a merchant tailor from the Jura; his maternal uncle, Gabriel Colombet, was a portrait-painter and pupil of David. He began when very young to paint with Remond, and copied Claude at the Louvre. To the famous Salon of 1831 he contributed a "View in Auvergne." He shared with Barye the patronage of the duc d'Orleans, who in 1833 bought his "Border of Felled Woods." From 1833 to 1836 he led the revolt against formalism. In 1836 his "Descent of Cattle from the Jura Mountains" was rejected by the Salon, and in 1837 his "Avenue of Chestnuts" was also rejected. No picture of his appeared at the Salon until 1849. In 1846 he was established in a studio at Paris; later he withdrew entirely to Barbizon. He painted a large number of pictures particularly representing the neighborhood of Barbizon and the forest of Fontainebleau.

Rowandiz (rou-ăn'diz). See the extract.

The "mountain of the world," or Rowandiz, the Acadian Olympos was believed to be the pivot on which the heaven pended, covering the earth like a huge extinguisher. The world was bound to it by a rope, like that with which the sea was churned in Hindu legend, or the golden cord of Homer, wherewith Zeus proposed to suspend the nether earth after binding the cord about Olympos (R. xiii. 19–20. . . . It lay far away in the regions of the northeast, the entrance, as it was supposed, to the lower world, and it was sometimes identified with the mountain of Niźir, the modern Rowandiz, on whose summit the ark of the Chaldean Noah was believed to have rested.

European Russia is bounded by the Arctic Ocean on the north; its Asiatic possessions on the east; the Caspian on the southeast; Persia, Turkey, and the Black Sea on the south; Rumania on the southwest; the Austrian empire, the German Empire, the Baltic, and Sweden on the west; and Norway on the northwest. The surface is generally a great plain, but on the borders are the Urals, Caucasus, the mountainous region of the Crimea, and spurs of the Carpathians; and northwest of the center the surface is broken by the Valdai Hills. Its chief rivers are the Niemen, Duna, Neva, Mezen, Dwina, Petchora, Tal, Volga (with the Kama and Oka), Don, Kuma, Terek, Kuban, Dnieper, Dniester, South, Vistula, etc. The Black and Caspian seas are largely Russian, and Russia includes Lakes Ladoga, Onega, Saima, Ilmen, Peipus, etc. It contains large forest, bog, and extensive steppes and tundras. Much of it is fertile, especially in the "black earth" belt toward the south. The leading occupation is agriculture. The chief crops are wheat, rye, and other cereals, hemp, flax, potatoes, tobacco, etc. There are manufactures of linen, woolen, etc.; live stock is raised; and there are fisheries of sturgeon, etc. Gold, platinum, coal, iron, petroleum, copper, and other ores exist. There are numerous exports (in normal years) as grain; after it come flax, hemp, linseed, timber, animal products, etc. Russia proper (including Poland and Finland) has numerous imports of manufactures. The government is a hereditary absolute monarchy, vested in the czar. Administration is committed to the council of the empire, senate, holy synod, and ministry. The leading race is Russian (the leading language being the most important, then the Little Russians and White Russians). Other nationalities are the Poles, Lithuanians, Finns, Germans, Swedes, Letts, Bohemians, Tatars, various hordes of Caucasians, Esthonians, Mordvinians, Tcheremisses, Tatars, Baskhirs, Persians, Armenians, Kirghiz, Kalmucks, Tchuvashes, etc. The leading religion is the Greek Catholic. There are many dissenters (Raskolniks) as well as many Roman Catholics, Jews, Protestants, Mohammedans, and some pagans. Russia has no foreign possessions except in Asia, and Alaska are vassal states. Russia was known to the ancients as Sarmatia. It had Greek colonies on its southern coast (Crimea, etc.); was inhabited by the Scythians, Finns, and other tribes; was overrun by the Goths, Huns, Avars, Bulgarians, Magyars, and Khazars. The Russian Slavs at the beginning of their history (9th century) were confined to the Dnieper, the upper Volga, upper Dnieper and the sources of the Oka and Volga, Ilmen, Dwina, and Duiester. The Varangians under Rurik came to Novgorod in 862. From about 882 Kief became the center. Sviatoslaff (964-972) defeated the Khazars, and waged war with the Byzantine empire. Christianity was introduced under Vladimir (972-1015). Russia became united under Yaroslaff (1015-1054), with Kief as the capital. After 1054 Russia was divided into many principalities, Kief being the grand principality and overlord for about a century, and then suzerainty passed to Vladimir; other large were Tver, Pskoff, Smolensk, Galicia, Volhynia, Ryazan, Tver, Tchernigoff, Novgorod-Severski, Polotsk, etc. The Mongol invasion, and the conquest by the Golden Horde, began in 1224, lasted about 1240. The Russian principalities became principality at the close of the 13th century, and a grand principality in 1328. (See *Moscow.*) Moscow was freed from the Mongol yoke in 1480. The work of consolidation was greatly advanced under Ivan III., Vasili, and Ivan IV. (the sanguinary, mentioned below). The title of czar (or tsar) was assumed by Ivan IV., in 1547. The dynasty of Rurik came to an end in 1598. The date of the accession of the house of Romanoff (the present reigning house) is 1613. A great development of the country took place under Peter the Great (1689-1725): Russia took part in the Northern War; and the capital St. Petersburg was built. It was also involved in the Seven Years' War. The reign of Catharine II. (1762-96) was signalized by wars with Turkey (1768-74 and 1787-92) and with Sweden (1788-90). Russia was at war with France 1799-1801. The following are the leading events and incidents of more recent history: Reign of Alexander I., 1801-25; war with France, 1805-07; alliance with France, 1807-12; invasion of Russia by Napoleon, 1812; war with France, 1812-1815; Holy Alliance (with Austria and Prussia); wars with Turkey, Persia, and Sweden; reign of Nicholas, 1825-55; war with Persia, 1826-28; war with Turkey, 1827-29; Polish insurrection, 1830-31; Hungarian rebellion suppressed by Russian aid, 1848-49; Crimean war, 1853-56; reign of Alexander II., 1855-81; emancipation of the serfs, 1861; growth of nihilism; war with Turkey, 1877-78; assassination of Alex-

The Don Cossacks came under the protectorate of Russia, and a great part of Siberia was added. The occupation of Siberia went on through the 17th century. Under Alexis (1645-76), Smolensk, Kieff, and the eastern Ukraine were added (about 1667). By the treaty of Nystad, Peter the Great gained from Sweden Livonia, Esthonia, Ingria, and Carelia, which had been conquered several years previously. Nicholas in 1828 acquired Erivan and Nakhitchevan from Persia, and in 1829 Poti and other fortresses near the eastern shore of the Black Sea from Turkey, and in 1834 the Akhalzikh district of Georgia. Under Alexander II. the Caucasus practically submitted in 1859; the Amur territory was gained in 1858; the Khanate of Samarkand was gained in 1868; Bokhara became a vassal state. Russian America was ceded to the United States in 1867. Khiva became a vassal state in 1873. The Chinese province of Kuldja was acquired in 1871, and restored in 1881. Khokand was annexed in 1875. C.: the Amphictyons summoned Philip to punish the Locrians of Amphissa for sacrilege; his successes led to the union of Athens and Thebes against him and their defeat at Chæronea in 338.

Sacred Way, 1. The ancient road from Athens to Eleusis, starting at the Dipylon Gate and traversing the Pass of Daphne. Over it passed every autumn from Athens the solemn procession for the celebration in the shrine of the great Eleusinian sanctuary of the mysteries in honor of Demeter, Persephone, and Iacchus. For almost its whole length it was bordered with tombs, chapels, and even more important foundations. At the outset of the road a number of the tombs remain in place, practically uninjured. (*See Ceramicus.*) Further along the modern road to Eleusis, whose line is almost identical with that of the sacred Way, many architectural fragments are still visible, and some can be identified from the descriptions of Pausanias. In the middle of the Pass of Daphne rises beside the road a monastery which exhibits, in contrast with its Byzantine architecture, some remnants of French Pointed work. It was founded by the French dukes of Athens, and contains their tombs, but occupies the site of a temple to Apollo. Further on, toward the Bay of Salamis, there are considerable remains of a sanctuary to Aphrodite.

2. [L. *Via Sacra.*] The first street of ancient Rome to be established on the low ground between the hills. It had its name either because on its line, according to tradition, Romulus made his treaty with the Sabine chief Tatius, or because on it by several of the oldest and most revered sanctuaries of Rome, as the temple of Vesta and the Regia. It began at the Clivus Capitolinus at the eastern end of the Forum Romanum,

and ran along the southern side of the Forum, past the Basilica Julia and the temple of Castor and Pollux; then it turned at right angles and crossed the Forum, and turned again to skirt the northern side of the temple of Julius Cæsar. It continued in front of the temples of Antoninus and Faustina and the basilica of Constantine to the arch of Titus. Under the empire it was extended hence past the Colosseum to a point on the Esquiline. The lava pavement of the Via Sacra, as it now exists, is almost all late in date; and it is probable that the course of the Sacred Way was slightly altered from time to time to meet architectural exigencies.

Sacsahuana (sāk-sä-wä'nä), or **Sacsahuaman** (sāk-sä-wä'män). A hill and ancient fortress, northwest of and overlooking the city of Cuzco, Peru. The hill is 1,000 feet higher mountains, and is so steep as to be practically unassailable on the side toward the city, where it is but slightly defended. The principal works face the other way, inclosing a projecting portion of the terrace. They consist of three walls, each 1,800 feet long, rising one behind the other and supporting artificial terraces, which were defended by parapets. The walls are built in solid and reentering angles, thus embodying a principle of modern fortification; counting from the outer one, they are respectively 27, 18, and 14 feet high. They are formed of immense irregular limestone blocks, fitted together with great skill (see the quotation); some of these were evidently taken from quarries three quarters of a mile distant. There are subsidiary structures, and the place was artificially supplied with water. These works are commonly called the fortress of the Incas or of Cuzco. Garcilasso (followed by Squier) says that they were built by the later Incas, and even names the engineer. Most modern archæologists now assign them to the pre-Incarial period, and they are supposed to be connected with the structures at Tiahuanuco (see that name and *Piruas*). When Inca Manco besieged the Spaniards in Cuzco (April, 1536), he seized this fortress, and the Indians were dislodged only after a fierce battle.

The work is altogether without doubt the grandest specimen of the style called cyclopean extant in America. The outer wall, as I have said, is heaviest. Each salient terminates in an immense block of stone, sometimes as high as the terrace which it supports, but generally containing one or more great stones only less in size than itself. One of these stones is 27 feet high, 14 broad, and 12 in thickness. Another is 36 feet in length, 12 in width, and 10 in thickness are common in the outer walls.

From them the officers of the state and army were taken. Contrary to the Pharisees, they placed secular interests above those of the church; they did not absolutely reject the institution and the oral law, but considered only the ordinances which appeared clearly expressed in the Pentateuch as binding, regarding the traditional precepts as confabulations. In like manner they did not exactly deny the immortality of the soul, but repudiated the idea of judgment after death. Owing to their influence with the Hasmonean princes, from

The square central tower is Norman. The interior combines very early and massive Romanesque work with the most graceful fully developed Pointed. He began his studies in his native city, and completed them in Paris at the colleges Charlemagne and Bourbon. On graduation he took a course in medicine, but gave it up a year later as uncongenial. A few book-reviews brought him favorably into notice in literary circles. Among the many friends he made there was Victor Hugo. In 1827 he com-

peted without success for a prize offered by the French Academy for a dissertation on the subject "Tableau de la poésie française au XVIe siècle." An improved edition of this work appeared in 1843, and is considered an authority on the subject (and period in question). He was also a contributor to "La Revue de Paris," "La Revue des Deux Mondes," "Le Constitutionnel," "Le Moniteur," and "Le Temps." The revolution of 1830 developed the political instinct within him, and he became closely connected with "Le Globe" and "Le National." His early work embraces some collections of poems, "Poésies de Joseph Delorme" (1829), "Consolations" (1830), and "Pensées d'août" (1837), also a novel, "Volupté" (1832). Of a more serious nature are "L'Historie de Port-Royal" (1840–1848), and "Chateaubriand et son groupe" (1849). His contributions to periodicals include most of his work as a critic. These so-called "Portraits" and "Causeries" have since been collected, and constitute his strongest claim to literary reputation. They are published as "Portraits littéraires" (1st series, 1832–4; 2d series, 1844), "Portraits de femmes" (1844), "Portraits contemporains" (1846), "Causeries du lundi" (1851–62), and "Nouveaux lundis" (1863–72), "Premiers lundis" (1875). In 1845 Sainte-Beuve was elected to the French Academy. He gave a series of lectures on literature at the College of France in 1854 and 1855–6 and in 1857. For a brief period thereafter he filled the chair in Latin poetry at the Collège de France. His last work as an editor of a weekly newspaper was with the ex-Empress Eugénie on the Étoile Nouvelle in 1870–71. His interest and activity in political matters reached a climax in his being nominated senator 1865 (a dignity he retained for the rest of his life).

Sainte-Chapelle (sănt'shă-pel'). [F., 'holy chapel.'] A chapel in Paris, built by St.-Louis as the chapel of his palace, and to receive and enshrine a precious relic — the crown of thorns — preserved in the treasury of the Byzantine emperor, Baudouin (Baldwin), son-in-law of the Emperor of Constantinople, Jean de Brienne, and his designated successor, had bound himself during a visit to Paris to secure this relic for Louis IX. On his return to Constantinople he found the emperor dead. The crown of thorns in pawn with the Venetians, and the treasury without money to redeem it. St.-Louis paid the required ransom (about 300,000 francs, present value), and the relic was sent to Paris. It arrived Aug. 18, 1239, and was deposited at Vincennes, whence it was carried with great pomp by the king himself to Notre-Dame. It was afterward placed in the chapel of St. Nicholas, then the chapel of the palace. Sainte-Chapelle was then built, and consecrated April 25, 1248. It is now that of the Palais de Justice. It is the most perfect example of the type prevailing during the best period of Pointed architecture. It consists of two chapels, one below the other. The lower chapel was dedicated to the Virgin, has four and narrow aisles, and is in itself architecturally remarkable. The upper chapel, 56 by 115 feet, is vaulted in a single span 60 feet high. Almost the entire wall-space is occupied by the great three-light windows, which are all filled with 13th-century glass of indescribable richness of color. The Flamboyant rose-window which occupies the entire upper half of the west end was inserted in the 15th century in place of the original window. All the stonework of the interior is decorated in gold and brilliant color, and there is much delicate sculpture. Beneath the roof is a range of arcades whose quatrefoils are filled with illuminations representing martyrdoms. The graceful wooden tabernacle at the east end is of the 13th century. The upper chapel was built to receive the crown of thorns and other relics. Before the west end there is a two-storied arcaded porch.

St. Paul's (pal's). A cathedral in London, begun 1675, according to the designs of Sir Christopher Wren, in place of the old cathedral of the 11th–13th centuries, which was destroyed in the great fire of 1666. Old St. Paul's was a very notable church, 590 feet long, and with a 14th-century wooden central spire 460 feet high. The existing cathedral was first used for divine service in 1697, and was completed in 1710, the cost being about $3,500,000. In plan and architecture it is akin to St. Peter's at Rome, but only one half as great in area, and relatively longer and narrower. Its dimensions are 500 by 145 feet; length of transepts, 250; inner height of dome, 225; height to top of cross, 364; diameter of dome, 112 feet—the diameter of that of St. Peter's being 139; feet, and of the Pantheon 142. The exterior is classical, with two stories; the front and transepts are pedimented, and the former is flanked by belfry-towers. The upper story on these sides merely masks the actual structure of lofty nave and towards being the same as the medieval cathedral. The dome is magnificent as perhaps the most impressing existing. Its drum is surrounded by a range of Corinthian columns, and it is surmounted by a lantern. Its external appearance from its size, and its use as a medium for display, depends for its effect largely on the disproportionate size of the base of the dome, and is therefore unsatisfactory. The interior is impressive from its size, and is one of the finest in England. The vaulted crypt, like the church itself, contains many tombs of monuments. The choir screen is of the Italian Renaissance style, is elaborately sculptured.

The flat wooden ceiling is elaborately carved. The mandorla is a beautiful work of the 14th century, with round arcade and clerestory above. The cloister is 13th century.

St. Peter's (pē'terz). The metropolitan church of the Roman see. The ancient basilica had become ruinous in 1450, and it was decided to replace it. Little was accomplished until 1506, when the work on the plans of Bramante was begun. Advance was slow until 1534, when Michelangelo's designs were substituted; but the dome was not completed until 1590. Most of the basilica was dedicated only in 1626. The plan is a Latin cross, 613 by 446 feet, with rounded apse and transepts, and a vestibule. The height of the nave is 152; feet to the vault. The interior diameter of the dome is 139; feet, its height to the top of the cross 448. The architecture is heavy pseudo-Roman, all the members being of such large size that much of the magnificent effect of magnificent scale is lost. The interior is lavishly decorated with stucco ornament and gilding, with colossal statues of saints. The pedimented doorway, resting on its four great columns, is a most magnificent achievements of architecture. The high altar is canopied with a bronze baldacchino 95 feet high, with spiral columns. Parts of the walls and vaults are covered with mosaics. There are many papal and princely tombs rich in statuary, some of it fine. The spacious crypts are in part of the time of Constantine, and contain many interesting memorials and art works.

[F. *Saint-Pétersbourg*, G. *Sankt-Petersburg*, *Petersburg*, Russ. *Sanktpeterburg*, *Peterburg*.] The capital of the Russian empire, situated in the government of St. Petersburg, at the mouth of the Neva, in lat. 59° 56′ N., long. 30° 19′ E. Its important manufactures, including cotton, leather, glass, porcelain; and has extensive commerce, foreign (directly and through Kronstadt) and internal (by the Neva and by the canals to the Volga and its connections. St. Isaac's Cathedral is a building of Renaissance style, imposing from its size (364 by 315 feet) and the magnificence of its materials: four rows of the finest granite, the shafts monoliths of polished granite, and the capitals of bronze. The pediments are filled with sculpture in bronze. The huge doors are of bronze covered with relief. In the interior the church proper is adorned with remarkable columns of malachite, over 20 feet high, and its royal doors are flanked by great pillars of lapis lazuli. The Kazan Cathedral is in plan a Latin cross with hexastyle porticos before the nave and transepts, and an apsidal chevet. Though one third smaller than St. Isaac's, it is still an imposing structure. The colonnade, which is in the north front only, is preceded by curved portico of admirable effect, in imitation of those of St. Peter's, Rome. The dome rests on 4 piers from which extend 4 fine double ranges of columns with granite shafts and bronze capitals and bases. The iconostasis is of silver, from the spoils of Napoleon I.; the cathedral contains many other martial trophies. The Cathedral of St. Peter and St. Paul, in the fortress, has been since the foundation of St. Petersburg the mausoleum of Russian sovereigns. In plan it is rectangular, 3 sainted, by 240 feet; it is rococo in style and crowned by a slender pyramidal spire, of Dutch design, 302 feet high, covered with gilded copper. The imperial tombs are interesting, and the icons and other church ornaments are extreme richness. The Arsenal contains a great number of warlike trophies. The palace of the grand duke Michael,

built 1820, is architecturally the finest palace in St. Petersburg, and of a stateliness and harmony of design which would command attention anywhere. The garden front presents long ranges of Corinthian columns resting on a single story of rusticated masonry, the total height being 87 feet. The 2 columns of the central portion stand free, forming a portico. At each end a pavilion projects slightly, and is adorned by six engaged columns surmounted by a pediment. The opposite front is of varied but kindred disposition. The entrance hall, with the grand staircase, is 80 feet square, and all the interior arrangements are at once appropriate and magnificent. The cathedral of Peter the Great, built by the army in 1733, and inhabited by him during the building of St. Petersburg, is carefully preserved as a memorial, and contains many relics of Peter. It is 20 by 35 feet, of wood, with 2 rooms and a kitchen. The czar's bedroom is now arranged as a chapel. The Moscow gate, a fine triumphal arch in a neo-Greek style, was erected in 1838 in commemoration of Russian victories in Poland, Turkey, and Persia. Twelve columns, 65 feet high and 17 in diameter support an attic which bears 12 angels in relief and inscriptions. Other objects of interest are the winter palace, Hermitage (which see), Admiralty palace, Nikolai and Alexander bridges, equestrian statue of Peter the Great, and Alexander column. The Nevski Prospekt is the principal street. The city is the seat of the imperial library (over 1,000,000 vols.), Academy of Sciences (with rich collections), Academy of Arts, various museums, military, naval, medical, and other schools, and learned societies. The university, founded in 1819, has faculties of history and philology, physics and mathematics, law, and medical studies, and is attended by about 2,000 students. The winter is long, and the climate unhealthy. St. Petersburg was founded by Peter the Great in 1703, and thousands were compelled by the emperor to remove their residence to it. It was largely developed by Catharine II., Alexander I., and Nicholas. Population (1890), with suburbs, 1,035,425.

Saint-Simon (saṅ-sē-mōṅ'; Anglicized sānt'sī'mon), **Claude Henri,** Comte **de.** Born at Paris, Oct. 17, 1760; died there, May 19, 1825. A French philosopher, the founder of French socialism. He came of an ancient and noble though impoverished family, studied under D'Alembert, and served as a volunteer in the American Revolution. He was prevented by his aristocratic birth from playing a prominent part in the French Revolution, but, after a time of some imprisonment, he accumulated a fortune by speculating in confiscated lands, and devoted himself to the study of philosophy. The latter years of his life were spent in poverty, his fortune having been wasted in costly experiments. His first work, "Lettres d'un habitant de Genève à ses contemporains," appeared in 1803; but it was not until 1817 that a distinct approach to a system of socialism was made in "L'Industrie." The fullest exposition of his socialistic views, which are frequently confused and contradictory, is that given in his "Nouveau Christianisme" (1825). These views were developed by his disciples into the complete system known as St.-Simonism. "According to this system the state should become possessed of all property; the distribution of the products of the common labor of the community should not, however, be an equal one, but each person should be rewarded according to the services he has rendered to the state, the active and able receiving a larger share than the slow and dull; and inheritance should be abolished, as otherwise men would be rewarded accord-

ing to the merits of their parents and not according to their own. The system proposes that all should not be occupied alike, but differently, according to their vocation and capacity, the labor of each being assigned, like grades in a regiment, by the will of the directing authority." (*J. S. Mill*, Polit. Econ., II. § 4.) Among his other works are "De la reorganisation de la société européenne" (1814), "L'Organisateur," "système industriel," and "Catéchisme des industriels" (1824).

(a period of about 30 years) were first published in a complete form by Sautelet under the title "Mémoires complets et authentiques du duc de Saint-Simon sur le siècle de Louis XIV. et la régence" (20 vols. 1829-30). Access to the Apis tombs is by a sloping subterranean passage. They consist of three groups, beginning in the 18th dynasty (about 1700 B. C.). The first two groups are the least interesting, and are now again inaccessible. The third group, established by Rameses II. of the 20th dynasty (about 650 B. C.), to about 50 B. C., consists of a series of burial-chambers opening from huge galleries about 1,200 feet in extent. Every Apis was buried in a granite sarcophagus about 13 feet long, 7½ wide, and 11 high. The Step Pyramid of Sakkarah is believed to be the oldest pyramid in Egypt. It is attributed, with probability to the 4th Pharaoh of the 1st dynasty. It consists of 5 steps of stages with sloping sides; its present height is about 197 feet, and its base measurement 353 by 204. Unlike the other pyramids, it is not entered toward the cardinal points. He became vizir in Egypt in 1169; suppressed the Fātimite dynasty in 1171; was proclaimed sultan in 1173; and conquered Damascus and the greater part of Syria. He endeavored to drive the Christians from Palestine; totally defeated them near Tiberias in 1187, taking prisoner Guyde Lusignan (king of Jerusalem), Chatillon (grand master of the Templars), and many others; and captured Acre, Jerusalem, Ascalon, etc. The fall of Jerusalem brought on the scene a powerful army of Crusaders under Richard the Lion-Hearted and Philip II of France, which besieged and captured Acre 1189-91. Richard took Cæsarea and Jaffa, and forced Saladin to accept a truce for three years in 1192. Scott introduces him in "The Talisman."

The church is of the period of transition between Pointed and Renaissance. The front is almost elaborately sculptured with figures and arabesques inclosed in a great round arch. The choir is elevated on a broad flat arch at the west end. The cloisters are light and have good sculpture. The university of Salamanca was founded in 1415. Salamanca, Council or Junta of. A meeting held in Salamanca, apparently in the autumn of 1486-87, to examine the projects of Columbus. King Ferdinand had referred them to Talavera to be laid by him before a gathering of scholars. The opinions of the majority were against Columbus. Probably the importance of this council has been overestimated.

There seems no reason to suppose that at best it was anything more than some informal conference of Talavera with a few councilors, and in no way associated with the professors of the university of Salamanca. The registers of the university, which begin back of the assigned date for such council, have been examined in vain for any reference to it. Las Casas, writing, during Columbus's lifetime, a history of the Indies, which is based largely on the journals of Columbus, does not mention the council. Peter Martyr, who knew Columbus well, and was in correspondence with the university of Salamanca, does not mention the council. Oviedo, who was personally acquainted with Columbus, and who was also in correspondence with the university of Salamanca, does not mention the council. Gomara, who was personally acquainted with Columbus, and who was also in correspondence with the university of Salamanca, does not mention the council. Ferdinand Columbus, who was personally acquainted with Columbus, and who was also in correspondence with the university of Salamanca, does not mention the council. The west front, while lacking the richness and structural propriety of French designs, is a notable work: it is flanked by low towers, and possesses 3 canopied portals, the central one triple. The wall-space and intricate towers is covered with six bands of arcades and quatrefoils, the arcades containing ranges of statuary. The capital exterior feature is the superb central tower and spire (406 feet high). The interior is excellently proportioned, with graceful arches and pillars but sober decoration. John Hyrcanus destroyed it in 129, but it was soon rebuilt. Pompey included Samaria in the province of Syria, and from the proconsul Gabinius it obtained the name of Gabinia or Gabiniopolis. Herod changed its name to Sebaste (Augusta) in honor of Augustus, and adorned it with magnificent buildings. Gradually Sebaste was surpassed in growth by Nablus (Shechem). Down to the 6th and again in the 12th century an episcopal see of Sebaste is mentioned, and to this day a Greek bishop derives his title from it. At present Sebaste is represented by the insignificant Mohammedan village Sebastieh, in which are still seen the ruins of a church erected by the Crusaders over the supposed grave of John the Baptist.

Samaritans (sa-mar'i-tanz). A religious community which originated after the fall of the northern kingdom. In place of the Israelites who had been killed and transported, Sargon brought to the territory of Samaria a colony from Babylon and Cuthah; and this was increased by contingents from the Assyrian provinces (Ezra iv. 2–10). Although priests were sent to instruct these foreigners in the "worship of Jehovah," the population had a mixed belief and practice. After the return from the captivity, the Jews declined the aid of the Samaritans in restoring the walls and the temple of Jerusalem, in consequence of which the breach between them was widened. The Samaritans, under the leadership of Sanballat and his son-in-law, founded a sanctuary of their own on Mount Gerizim (according to Josephus, in 332). In consequence of this the town of Shechem (Nablus), at the base of the mountain, rose in importance, while Samaria declined. The temple was destroyed by John Hyrcanus, and, apart from some rebellions and repeated conflicts between them and the Jews and Christians, the Samaritans henceforward cease to have any noteworthy separate history. The Samaritans are strict monotheists, believe in spirits and a resurrection, expect a Messiah to appear 6,000 years after the creation of the world, and possess only the Pentateuch, written in the old Hebrew characters, in its text more akin to that of the Septuagint than to the Hebrew Massoretic text. They still make a pilgrimage on the three principal festivals to Mount Gerizim. Their numbers are steadily diminishing, consisting at present (1894) of forty or fifty families only, who live in a separate quarter of Nablus.

It was particularly popular during the Alexandrine epoch, from which date many of its interesting monuments, though there are also remains of the earlier period. On this island was found the famous statue called "the Victory of Samothrace," now in the Louvre. The existing remains have recently been scientifically explored by Conze and Newmann. The circular temple, 66 feet in diameter, dedicated by Arsinoë, queen of Ptolemy II., had a basement-wall of masonry, surmounted by 44 square piers with ornate capitals, supporting a Doric entablature. The Doric temple, of unusual plan for its Hellenistic date, apparently foreshadowing Roman types, was prostyle, hexastyle, with 2 intervening columns between ante-column and ante on each flank. The cella was divided into 3 aisles, and ended within in an apse, though square outside. The plan measures 45 by 120 feet. The area of the island is about 71 square miles. There are few inhabitants. Samson (sam'son). His exploits and adventures with the Philistines, the hereditary enemy of his people, are related in the Book of Judges xiii.–xvi. Some exegetes relegate them to the sphere of myth completely. Samson, both because of his strength and his exploits, is quite fam of the Greek Heracles. It is, however, likely that the accounts of his deeds, though embellished by popular legend, rest on a foundation of historical fact.

They were formerly numerous and were divided into several small tribes (Cotoños, Tapiis, Curabicas, Yuracares, Chiquitos, etc.). D'Orbigny was the first to apply the name to the whole group. Physically they are a fine race, tall, well formed, and rather light-colored. They are hunters and agriculturists, and brave warriors but not quarrelsome. Their language, closely allied in the different tribes, is soft and musical: it appears to constitute a distinct stock. The race is nearly extinct.

Samuel (sam'ū-el). [F. *Samuel*, It. *Samuele*, D. G. *Samuel*, LL. *Samuel*, Gr. Σαμουήλ, Heb. *Shemuel*.] A Hebrew prophet. He was the son of Elkanah and Hannah, of the tribe of Ephraim (according to 1 Chron. vi. 27, of the tribe of Levi), and was brought up in the sanctuary of Shiloh, under the eyes of the high priest Eli. In his early youth he felt himself called to the exalted vocation of prophet, and obtained a position in the history of the second only to that of Moses. He was the preserver of the works of Moses, a unifier of the people and averter of the threatening decay and internal corruption. After the fall of the sanctuary of Shiloh and the defeat of Israel by the Philistines, Samuel rallied the people in Mizpah (modern Nebi Samwîl), renewed the covenant with Jehovah, and expelled the foreign gods. He then became the religious and political reformer of Israel. To spread a healthy and pure religious life in Israel, he established the so-called "schools of the prophets," a special feature of which was the cultivation of sacred poetry and song. His sons Joel and Abijah shared with Samuel the management of the affairs of the people. They were disliked, however, and abused their power. In addition to this, need for a leader in case of war became more and more felt. This resulted in the demand by the people for Saul to place a king at the head of the Israelite community. With a heavy heart the aged prophet acceded to the wish of the people, in which he saw the loss of their liberty and independence, and anointed Saul. Saul's disobedience in the war against Amalek caused a rupture between the prophet and himself, and his virtual deposition. Later he anointed David as king, and this is the last act recorded of him. He died at an advanced age in Ramah. The time of his activity falls at the end of the 12th and the beginning of the 11th century B. C. The books of Samuel owe their title to the circumstance that they begin with the history of the prophet: they were not composed by him, nor does his history form the chief part of their contents. Like the books of Kings, the books of Samuel formed originally one book. The division was introduced in the old Greek and Latin versions. The books of Samuel comprise the history of Israel to the end of Saul's life, and of David (about 1 B. C.), and certainly recorded in the book . . . per 1,000 and 1,000 years. The last book relates the entire of Samuel, the establishment of the monarchy in Israel, and the conflict between Saul and David, closing with the death of Saul. The second book gives the history of David's reign.

At first he is introduced as the opposite of Don Quixote, and used merely to bring out his master's peculiarities in a most striking relief. It is not until we have gone through nearly half of the First Part that he utters one of those proverbs which form afterwards the staple of his conver-

sation and humor; and it is not till the opening of the Second Part, and indeed, not till he comes forth, in all his mingled chivalrousness and credulity, as governor of Barataria, that his character is quite developed and compacted to the full measure of its grotesque, yet courtuous, proportions. *Ticknor*, Span. Lit., II. 146.

Sanchuniathon (sang-ku-ni'a-thon), or **Sanchoniathon** (san-kō-ni'a-thon). [Gr. Σαγχουνιαθων, Σαγχωνιαθων, Σαγχωνιαθωνος, said by Movers to mean 'the whole law of Chon,' and thus a name, not of a person, but of a collection of writings.] An (alleged) ancient Phœnician writer, said to have lived before the Trojan war, whose works (founded upon records preserved in the temples) Philo Byblius pretended to have translated.

Great importance is usually attributed to the so-called fragments of Sanchuniathon. It is well known that in Le Sclerc's time an alleged translation of a Phœnician history written by a certain Philon Byblios, who lived in the first and second centuries A. D. This Philo Byblios is said to have translated his list of gods out of the Phœnician original in a certain Sanchoniathon. But now the question remains, did the ancient Phœnician document ever exist, or did Philon only write or use his own work by the author (Sanchoniathon, more or less identical, name)? This last opinion was formerly maintained by Movers, and quite lately defended with important arguments by Baudissin. This opinion is supported by the strong syncretistic and eclectic tendency of the fragments, which betray far too much knowledge of Egyptian, Greek, and perhaps even Persian ideas to be regarded as typically Semitic, or as the original form of the Phœnician religion. The chief contents of these fragments are several cosmogonies which one has to take pains to build together into one theory, but the individual traits contain valuable materials for a comparison with other Semitic cosmogonies.

Sand (sand; E. sand), **George**; nom de plume of **Armantine Lucile Aurore Dupin, Baroness Dudevant**. Born at Paris, July 5, 1804; died at Nohant, Indre, June 8, 1876. An eminent French novelist and playwright. Her early life was spent in the quiet of her grandmother's country house, and in 1817 she entered the Convent des Dames Anglaises in Paris, where she remained till 1820. Her marriage with Baron Dudevant, a retired army officer, was celebrated in 1822. Their union, although blessed with two children, was not happy, and in 1831 she went to Paris with Jules Sandeau in search of a life of independence born of literary work. Her first writing was done in collaboration with Jules Sandeau, and was signed jointly "Jules Sand." On St. George's day, Sandeau might be her to work on her own account and receive full credit due her. From this concourse of circumstances arose her nom de plume. Embracing the views of advanced republicanism, she followed by nightfall she published a couple of open letters, and made prefatory remarks, at the request of Louis Blanc, to his "Histoire de la revolution française." (1841), and to the official "Bulletins de la république." At various times she contributed to "La Revue Indépendante" and "La Commune de Paris," and in 1848-49 she started a newspaper of her own, "La Cause du Peuple." The preface to a work with socialistic tendencies, "Les contes d'une vieille" (1849), was written by her and under the title "République et royauté en Berry" (1850) she published a translation of a book by the celebrated Italian revolutionist Joseph Mazzini. But her best work is in her novels, as for instance in "Indiana" (1832), "Valentine" (1832), "Lélia" (1833), "Le secrétaire intime" (1834), "Jacques" (1834), "Mauprat" (1836), "Consuelo" (1842), "Francois le Champi," "La mare au diable," "La petite Fadette" (1848-49), "Les maîtres sonneurs" (1853), "Mont-Revêche" (1855), "Elle et lui" (1859 which called out De Musset's "La Confession d'un Enfant du Siècle"), "Le Marquis de Villemer" (1860), "Mlle de la Quintinie" (1863), "Pierre qui roule" (1869), "Nanon" (1872), etc. Most of these books appeared first in serial form in "La Revue des Deux Mondes." Of the above, "Le secrétaire intime" and "Elle et lui," and also another work, "Lettres d'un voyageur" (1830-36), deal with the period of George Sand's intimacy with Alfred de Musset. The gentle novelist herself dramatized her story of "François le Champi" in 1849, wrote her plays, however, were written direct for the stage, and include "Claudie" (1851), "Le démon du foyer," and many others.

Sand, Maurice. The pseudonym of Maurice Dudevant, the son of George Sand.

Sandabar (san-de-bär'). The Mishle Sandabar, or Parables of Sandabar, are a medieval collection of fables in Hebrew. They are substantially the same work as the Greek "Syntipas, the Philosopher," and the Arabic "Romance of the seven Viziers." The name *Sindabar* is supposed by Keith-Falconer's "Kalilah and Dimnah, or the Fables of Bidpai" (Cambridge, 1885), p. lxxii.) to come from a misreading of the unpointed Arabic name *Indabar* (the Sanskrit *vidyapati*, 'lord of wisdom'), which has become *Indbar* and *Bidpai*. *Indabar* may have had its ancestor form a final *d* to represent the *t* of *pati*, thus, when misread, yielding the form *Sandabad* (pron. *sendebed*), which also occurs. As written in Hebrew the final *d* might be confounded with *r*, thus giving the form *Sandabar*. The Parables of Sandabar must not be confounded with the Hebrew versions of the Arabic "Kalilah and Dimnah." See "Paraboles de Sandabar, traduites de l'Hebreu par E. Carmoly." Paris (1849);

"Syntipas. De Syntipa et Cyri filio Andreopuli narratio edita a Boissonade." Syrisch u. deutsch von Fr. Baethgen," Leipsic (1879).

The famous collection which in the East went under the title of *Sendabad* was translated into Latin at least early in the 13th century, and became very popular throughout every language of Western Europe under the name of the Romance of the Seven Sages. *T. Wright*, Essays, II. 60.

Sandrocottus (san-drō-kot'us), or **Sandrokottos** (san-drō-kot'os), or **Chandragupta** (chun-dra-gōp'ta). The founder of the Maurya or Magadha kingdom in India (capital Patna). He reigned about 315–291 B. C. According to Greek tradition he was an Indian king who in the time of Seleucus Nicator ruled over the Gangaridæ and Prasii on the banks of the Ganges. He was of mean origin, and was the leader of a band of robbers before obtaining the supreme power. At the troubles following the death of Alexander, he extended his sway over the greater part of northern India, conquering the Macedonians left by Alexander in the Panjab. Seleucus invaded his dominions, but did not succeed, and, concluding a peace, ceded to Sandrocottus his conquests in the Panjab and the country of the Paropamisus, receiving in return 500 war elephants. For many years afterward Seleucus had as his ambassador at the court of Sandrocottus, Megasthenes, to whose work entitled "Indica" later Greek writers were chiefly indebted for their accounts of India. The identity of Chandragupta and Sandrocottus admits of no reasonable doubt. The identification is of the utmost importance to Indian chronology, in which everything depends upon the date of Chandragupta as ascertained from that of Sandrocottus as given by the classical writers. His accession is the subject of the Sanskrit drama "Mudrarakshasa," Hindu and Buddhist writers are entirely silent as to Alexander, but show that Chandragupta overthrew the dynasty of the Nandas and "established freedom in India by the help of robbers." His capital was Pataliputra (Greek Palibothra), the modern Patna. The dynasty of the Nandas is often spoken of as the "nine Nandas," meaning "nine descents," or, according to some, the last king Mahapadma and eight sons. Mahapadma Nanda was the son of a Shudra, and so by law a Shudra himself. He was a tyrant. The Brahman Chanakya is represented as having brought about his fall. Chandragupta was then raised to the throne and founded the Maurya dynasty, of which the great Ashoka was the third king. The commentator on the Vishnupurana says that he was a son of Nanda by a Shudra woman named Mura, whence he and his descendants were called Mauryas. The Buddhists claim that the Mauryas were of the same family with Buddha, the Shakyas.

Sankhya (sän'khya). [Skt.: from *sāṅkhyā*, 'reckoning, enumeration,' comes the adjective *sāṅkhya*, 'relating to number, reckoning, calculating,' of which *Sāṅkhya* is the masc. or neuter sing. used substantively in the sense of the primitive.] The third of the six systems of Hindu philosophy, ascribed to the sage Kapila. It repudiates the notion that matter can originate from spirit, and that anything can be produced from nothing. Instead of an analytical inquiry into the universe as existing, it proceeds synthetically, starting from an original primordial matter, or 'eternally existing essence,' called prakriti, a word meaning in philosophy 'that which evolves or produces everything else.' Beginning with this original, eternal germ, the Sankhya reckons up (of the unreal) 25 other 'entities or 'entities,' all productions of the first and evolving themselves spontaneously out of it. Of these 25, 7 are produced and producers, whereas some (8) are productions. The 7 are (1) intellect (buddhi), (2) self-consciousness (ahankara, the "I-making" faculty), (3) five principles called tanmatras ('subtle elements'), and (4) the five gross elements (viz., 5 organs of sense and 5 organs of action, together with an 11th, standing between the two sets, called manas, 'mind,' an internal organ of perception, volition, and action). Purusha, "the soul," is the 25th reality. It is neither producer nor produced, but eternal like prakriti, and quite distinct from the produced and producing elements of the phenomenal world. These 2 producers, the 7 grosser elements, and the 11 organs constitute the phenomenal world: but as ahankara or 'self-consciousness' is after prakriti the most important producer, the whole world of sense is, according to the Sankhya, practically created by the Ego. Prakriti again is viewed as constituted of 3 principles in equipoise called gunas, 'qualities,' viz., goodness or purity, passion or activity, and darkness or inertness. As the ingredients of prakriti they affect all that is evolved from it. The ethical end of the Sankhya system is to effect the liberation of the purusha or 'soul' from the fetters in which it is involved by union with prakriti. This is done by prana or 'correct knowledge' of the 25 constituent principles of creation, and discriminating the soul from them, its possessions, or 'means of obtaining the correct measure of existing things,' being 3—viz., sense-perception, inference, and revelation or assertion of trustworthy testimony. Some adherents of the Sankhya maintain the existence of a supreme soul called Ishwaragatha. The Sankhya proper not so much denies the existence of a supreme being as ignores it as incapable of dialectical demonstration. "He must be free from desires and not bound by troubles," say in substance the 92d and following aphorisms. "If he were free from desires, he could have no will to create. If he were bound by desires of an kind, he would be under troubles and deficient in power."

San Martin (sän mär-tēn'), **José de.** Born at Yapeyú, Misiones (now in the Argentine Republic), Feb. 25, 1778: died at Boulogne, France, Aug. 17, 1850. A celebrated Spanish-American general in the war for independence. Reserved in Spain against the French (1796–1811), attaining the rank of lieutenant-colonel; resigned in the latter year; and early in 1812 went to Buenos Ayres, where he joined the patriots. In 1813 he received command of the army operating in Upper Peru or Bolivia. Heretofore the patriots had endeavored to strike the central Spanish power in Peru by way of Chuquisaca and Lake Titicaca. San Martin resolved to open a new line of operations through Chile, and in this he was efficiently supported by the supreme director Pueyrredon. An army of invasion was organized and drilled at Mendoza during two years; and on Jan. 17, 1817, San Martin, with 4,000 men, began his celebrated march over the Andes by the Uspallata Pass (12,300 feet high). The victory of Chacabuco (Feb. 12, 1817) was followed by the occupation of Santiago (Feb. 15). On Feb. 19, 1818, he was defeated at Cancha Rayada; but his brilliant victory at the Maipo (April 5, 1818) virtually expelled the Spaniards from Chile. He had declined the office of supreme director of Chile, and prepared for the invasion of Peru. A small navy was organized, and in Aug., 1820, the patriot army of 4,500 men sailed for the Peruvian coast. Mainly by skilful manœuvres, San Martin was able to occupy Lima July 9, 1821, and Callao soon after. On July 28 he was proclaimed supreme protector of Peru. The approach of Bolivar with another army from the north threatened a strife for leadership, and San Martin patriotically gave way to his rival: after an interview with Bolivar at Guayaquil (July 26, 1822) he resigned his office to the Peruvian congress (Sept. 22), issued an eloquent farewell address, and soon after left the country. The emancipation of Peru was completed by Bolivar. San Martin spent the rest of his life in comparative poverty in France, taking no further part in South American affairs.

Sannazaro—a Neapolitan gentleman, whose family had been carried from Spain to Naples by the political revolutions of the preceding century—is the true father of the modern prose pastoral, which, from him, passed directly to Spain, and, during a long period of success in that country, almost entirely lost like romance in author had originally impressed upon it. His "Arcadia"—written, probably, without any reference to the Greek pastoral of Longus, but hardly without a knowledge of the "Amor" of Boccaccio and the Ameto of Benibo—was first published entire, at Naples, in 1504.

During this and his successive occupations of the presidency he retired to his estate or took command of the army, leaving the administration in the hands of acting presidents, who were generally mere servants subscribing to but not bearing the ordinal of arbitrary proceedings. In 1835 he led the army against the revolted Texans. His first successes were followed by massacres of the garrisons of the forts defeated and captured at the battle of San Jacinto, April 21, and released only on agreeing to favor the independence of Texas. The popularity lost in this campaign was regained by the part which he took in the successful defense against the French of Vera Cruz, where he lost a leg (Dec., 1838). He was prominent in the defeat of the federalist revolt of 1839, supporting President Bustamente; but in March, 1841, he forced Bustamente's resignation and was again proclaimed president. By a new constitution, adopted June 12, 1843, he became practically dictator. He was deposed and exiled in 1845; recalled and again made president in Dec., 1846; and commanded the army in the war with the United States. After Scott's occupation of Mexico (Sept., 1847) he resigned and left the country. By a revolt of the army he was recalled and made president, April, 1853, assuming dictatorial powers. The revolution which quickly followed drove him into exile in July, 1855; and, though he made an unsuccessful attempt to interfere in Mexican affairs in 1864, he never after rose to prominence. He returned to Mexico after the death of Juarez, and died almost forgotten.

Sappho (saf'ō). [Gr. Σαπφώ, F. *Sapho,* It. *Saffo.*] A Greek lyric poet who flourished about 600 B. C. She appears to have been a native of Mytilene, in Lesbos, where she presided over a school for the cultivation of the art of versification, and to have been the center of a literary coterie of women. There is no foundation for the story that she threw herself from the Leucadian promontory into the sea, out of love for a beautiful youth, Phaon, who disdained her advances. She wrote nine books of lyric poems, all of which are lost except an ode to Aphrodite and a number of fragments. She was called "the tenth Muse."

Among the ancients Sappho enjoyed a unique renown. She was called "The Poetess," as Homer was called "The Poet." Aristotle quoted without question a judgment that placed her in the same rank as Homer and Archilochus. Plato, in the Phædrus, mentioned her as the tenth Muse; Solon, hearing one of her poems, prayed that he might not see death till he had learned it. Strabo speaks of her genius with religious awe. Longinus cites her verses as a specimen of poetical sublimity. The epigrammatists call her Child of Aphrodite and Eros, nursling of the Graces and Persuasion, pride of Hellas, peer of Muses, companion of Apollo. Nowhere is a hint whispered that her poetry was aught but perfect. As far as we can judge, these praises were strictly just. Of all the poets of the world, of all the illustrious artists of all literatures, Sappho is the one whose every word has a peculiar and unmistakable perfume, a seal of absolute perfection and inimitable grace.

[Skt., 'rich in waters.'] **1.** In the Rigveda, the name of a mighty river emptying into the sea (conjectured by Roth to be the Indus), and of its genius, who protects the dwellers upon its banks, and showers upon them blessings of every kind. Roth regards Sarasvati as the special and sacred, Sindhu as the general and profane, name of the stream, and thinks that its name and sacred attributes are transferred in later times to the little river in Madhyadesha, to which in his opinion the description in the Rigveda cannot with probability be applied.

2. Several times in the Rigveda, and very often in the later literature, a little river, regarded as sacred, that with the Drishadvati forms the boundaries of Brahmavarta, and is lost in the sand, but at last, according to the view of the Hindus, running on under the earth, unites itself with the Ganges and the Jumna. Muir ('Original Sanskrit Texts,' V., 337–340) prefers the name only to the latter river, and explains the development of the idea of the goddess. The region between the Sarasvati and the Drishadvati, called Brahmavarta, having long been a stronghold of Brahmanic culture, the Sarasvati became to the early Indians what the Ganges has been to their descendants; hence the Sarasvati personified became the patroness of sacrifice, and was imagined to have a part in the composition of the hymns and so identified with Vach, the goddess of speech. As Brahma is essentially in origin the personification of the Brahmanic order and of Brahmanism, Sarasvati is Brahma's wife.

Sardou (sär-dö′), **Victorien.** Born at Paris, Sept. 7, 1831. A noted French dramatist. His extreme poverty as a young man compelled him to give up his medical studies. In 1854 he wrote a play, "La Taverne des étudiants," which proved a complete failure. Discouraged and broken down in health, he fell dangerously ill. He was cared for by a charitable neighbor, Mademoiselle de Brécourt, whom he subsequently married, and who was largely instrumental in restoring his enthusiasm for dramatic work. His first fortunate introduction into theatrical circles enabled him to place his plays: his first success may be said to date from his productions of "M. Garat" and "Les prés Saint-Gervais" (1860–61). Among his numerous plays are the following: "La Famille Benoiton" (1865), "Nos intimes" (1861), "La famille Benoiton" (1865), "Les bons villageois" (1866), "Maison neuve" (1866), "Ferréol" (1875), "Fernande" (1870), "Dora Hochat" (1880), "Patrie" (1869), "Odette" (1881), "Georgette" (1885), "Marquise" (1889), and "Belle-Maman" (1889). He is also the author of "Rabagas" (1872), a political satire; "La Haine" (1874), a satire on American society; "Les bourgeois de Pont-Arcy" (1878); "Fédora" (1882); and "Le crocodile" (1886). Sardou's work is characterized by the most elaborate stage-setting, as "Patrie" (1869), "La haine" (1874), and "Théodora" (1884), "La Tosca" (1887), "Cléopâtre" (1890), "Thermidor" (1891). The accusation of plagiarism has repeatedly been brought against Sardou: for instance, "Les pattes de mouche" has been said to be based on "The Furloined Letter" by Edgar Allan Poe: "L'Oncle Sam" to have been borrowed from Alfred Assollant's "Scènes de la vie des États-Unis" (1858), etc. In addition to winning cases of this kind before the courts, Sardou wrote "Mes plagiats" (1883) in refutation of such attacks. He was elected to the French Academy June 7, 1877.

Sargon (sär′gon). [Assyr. *Sharru-kenu*, the legitimate king.] **1.** The first historical king in the old Babylonian period. An inscription of Nabonidus, the last King of the Babylonian empire (555–538 B. C.), speaks of Sargon's son Naram-Sin as having ruled 3,200 years before about 3750 B. C. Sargon's reign may therefore be placed at about 3800 B. C. Sargon ruled over North Babylonia, with his residence in Agade (Akkad). He made conquests in the west (Elam and Syria), and erected the temple Eulbar in honor of Anunit.

2. King of Assyria 722–705 B. C. He was probably a usurper and assumed this significant name after his accession to the throne. He is one of the most imposing characters among the Assyrian kings, great both as a warrior and ruler. He was the consolidator of the Assyrian empire, by uniting the Mesopotamian and Babylonian which continually broke out in all parts of the vast empire, and by employing the policy of transplanting the subjugated peoples to remote provinces, thus crushing their national existence. The first act recorded of him was the conquest of Samaria and the destruction of the northern kingdom of Israel. The inhabitants of Samaria (27,290 in Sargon's account, 27,290 in number) were transported to "Halah, Habor, the river of Gozan, and the cities of the Medes," and in their place were settled peoples from "Babel, Cuthah, Ava, Hamath, and Sephar vaim" (2 K. xvii. 6, 24). See *Samaria*.) Of Sargon's other expeditions may be mentioned those against Ilubi'di (or Yahubi'di) of Hamath in 720, Carchemish in 717, Ashdod in 711 (cf. Isaiah xx. 1), and especially his war against Merodach Baladan of Babylon, which ended with the defeat of the latter and Sargon's taking possession of Babylon. He received an embassy and gifts from seven kings who ruled in Cyprus, in return for which he presented them with a stele bearing his image and an inscription which is now preserved in the Royal Museum of Berlin. No less energetic was Sargon in works of peace. He established a city for his residence, naming it Dur-Sharrukin. It was situated at the foot of the mountain Muri, north of Nineveh, and is now represented by the ruins of Khorsabad. Cruel as Sargon was in war, he had great care and concern for the welfare and prosperity of his subjects.

Many of the ships wrecked; the commanders quarreled; and Flores returned to Spain, leaving Sarmiento with only four vessels. Lenglet. It was written by 7 men (Leroy, Gillot, Passerat, Rapin, Chrestien, Pithou, and Durand), most of them lawyers.

The plan of the (Satire) Menippee (the title of which, it is hardly necessary to say, is borrowed from the name of the cynic philosopher celebrated by Lucian) is for the time the most original and bold; but the spirit in which the subject is treated is more original still. Generally speaking, the piece has the form of a *compte-rendu* of the assembly of the states at Paris. The full title is "De la Vertu du Catholicon d'Espagne et de la Teneur des Etats de Paris." The preface contains a sarcastic harangue in other characters than those of the mystics of the new Catholicon or Panacea. Then comes a description (in which, although cut out the work, actual facts are blended in an artfully with the fictitious) of the procession at the opening. To this satirical commonplace succeeds a sketch of the tapestries with which the hall of meeting was hung, all of which are, of course, allegorical, and deal with matters of princes, betrayal of native countries and deal with matters of princes, betrayal of native countries and deal with matters of princes, betrayal of native countries

2. The heroine of an episode of the Mahabharata. She was the daughter of Ashvapati, king of Madra, and beautiful as Lakshmi; but, when the time came for her to choose a husband in accordance with the custom of the svayamvara (which see), chose Satyavant, the son of the blind and exiled king Dyumatsena, who dwelt with his wife and son in the forest. The divine seer Narada warns against the choice, as Satyavant, though handsome, magnanimous, and pious, has only a year to live. Savitri is firm, weds Satyavant, and lives in joy with him until the approach of the fatal day. On that day Satyavant and Savitri go together into the forest. Satyavant sinks to the ground in deadly illness; and, while Savitri supports his head upon her bosom, Yama the death-god appears and withdraws Satyavant's soul. As Yama turns to go, Savitri follows him, asking her husband's life. Yama grants her boon after boon, offering other gifts than Satyavant. She obtains the restoration of Dyumatsena's sight and kingdom, for her father a hundred sons, and a hundred sons for herself and Satyavant, but still follows upon following Satyavant into the realm of death if his life is not restored. At last Yama relents, and when Savitri goes back to Satyavant's body and again takes his head upon her bosom he awakes as from a sleep, and the two live happy many years in the recovered kingdom of the now-seeing Dyumatsena. The Savitri episode has been translated into German by Bopp, Ruckert, Hofer, Holtzmann, Meier, and Merkel.

He was for a time virtually dictator of Florence, but was excommunicated by Alexander VI., by whom he had denounced, and was in consequence excommunicated in 1497. Savoy (sa-voi'), **F. Savoie** (sä-vwä'), It. **Savoja** (sä-vō'yä). A former duchy, now divided into the departments of Savoie and Haute-Savoie (which see) in France. It was occupied in ancient times by the Allobroges: passed to Rome about 122 B. C.; was conquered by the Burgundians in the 5th century, by the Franks in the 6th century; and later was part of the kingdom of Arles until 1032, passing then under German suzerainty. The rise of the counts of Savoy dates from the middle of the 11th century, and Turin and Aosta were annexed in that century. Savoy was made a county of the empire in 1111; Valais was annexed in the 13th century; and Montferrat, Nice, etc., were added in the 14th century. Savoy was made a duchy in 1416; Vaud, Geneva, Valais, Chablais, and Gex were lost 1533–36; the dominions, reduced to Nice in 1538, were largely restored by the treaty of 1559. Savoy, The. A former London palace, now a chapel royal. On Feb. 12, 1246, a grant of land lying between the "strande" and the Thames was made by Henry III. to Peter of Savoy, uncle of Queen Eleanor, and he built the palace of that name. Peter dedicated his property to the friars of Montjoie, who sold the palace to Queen Eleanor in 1270. In 1284 she gave it to Edmund, earl of Lancaster, and after it became the town seat of the dukes of Lancaster. When the Savoy was occupied by John of Gaunt in 1376, it was twice attacked by a mob, and again by Wat Tyler's followers in 1381, when it completely destroyed the palace. It was rebuilt during 1505 as a hospital, and endowed by the will of Henry VII.; suppressed by Edward VI.; refounded by Mary; and finally dissolved by Elizabeth. The present chapel royal was built on the ruins of a chapel of John of Gaunt, dedicated in 1511. The style is Perpendicular; the wooden ceiling is modern; there is excellent glass. This is the only one of the old buildings remaining, and was made a chapel royal by George III. in 1773; in 1864 it was partly destroyed by fire, and was reopened in 1865: it is entirely supported from the queen's privy purse. The French Protestants had a chapel here from the time of Charles II. till about 1737: this is the origin of the name Savoy, given in the 18th century to the peculiar one known as "Old Hundredth." The Savoy Theatre was built near here on the Strand, and opened in 1881.

Saxo Grammaticus (sak'sō gra-mat'i-kus). A Danish historian of the 13th century. Little is known with certainty of his personal history, except that he was a clerk, and that his father and grandfather fought under Waldemar the Great. He had the surname Longus, but is commonly known as Grammaticus from his fluent style as a writer. His history, called "Gesta Danorum" or "Historia Danica," is written in Latin, and was undertaken at the instance of Archbishop Absalom, whose secretary he probably was. Parts of the work, from internal evidence, were written before 1202; he is supposed to have died shortly after the year 1208. The history consists of 16 books: the first 9 are purely legendary; the 2 following partly; authentic history begins with the twelfth book. The whole ends with the year 1186. The material for the earliest part was oral traditions, myths, legends, and poems, most of which have also been lost, although a few have been preserved in the original Old Norse form. Among others of the kind it contains the Hamlet ("Amleth") legend, of which Shakspere's drama is a variation. The oldest edition is that of Kristiern Pedersen, Paris, 1514, according to which all subsequent editions have been printed. The classical Danish translation is by Anders Sörensen Vedel (1545–1616), published first at Copenhagen in 1575.

3. The inhabitants of Saxony in its later German sense, including Saxony and the Saxon duchies (which see).

The Saxon Shore was guarded by a force of Roman soldiers, whose commander enjoyed the title of Comes Litoris Saxonici, or Count of the Saxon Shore, and whose jurisdiction extended from Sussex to Norfolk. *Chisholm*, Geog., p. 97.

There is some question whether Frisian or Saxon tribes were not settled on the eastern coasts of Britain before the landing of Cesar. This theory rests chiefly on the supposed Germanic names of two tribes, the Cantiaci and the Coritanchani; on a remark of Tacitus that the Caledonians were large-limbed and red-haired like the Germans; on one tribe-name, Iceni, being like Suevi; and on the Roman officer who governed the littoral from the Wash to the Adur; and on the fact that the Saxons in the fifth century seem to have found a kindred people already established in East Anglia, since no conquest of that district is on record. *Pearson*, Hist. Eng., I. 6.

Saxony (sak'sn-i). [ML. *Saxonia*, It. *Sassonia*, F. *Saxe*, from G. *Sachsen* (AS. *Seaxan*), prop. a tribe name, 'Saxons.'] The land of the Saxons: a geographical name the use of which has greatly varied in medieval and modern times. The ancient duchy of Saxony was one of the four great duchies of the old German kingdom. It was in northern Germany, comprised (roughly) between the Ems, North Sea, Eider, and Elbe, and extending to the south of the Harz, touching Franconia, but not the Rhine. Saxons appear first about 150 A. D., dwelling north of the Elbe estuary. Later they absorbed the Thinci, Chasuci, and Angrarii; spread westward to the Rhine; and became noted as pirates, plundering the coasts of Gaul and Britain. They aided Caracalla in 287; were defeated by Valentinian; founded Essex, Sussex, and Wessex in Britain in the 5th and 6th centuries; and settled at the mouth of the Loire and on the coast of Normandy. Their four divisions in northern Germany were the Westfalin, Ostfalin, Engern, and Nordalbingia. They were reduced by Charles the Great in a series of wars 772–804, and obliged to accept Christianity. About 800, bishoprics were established at Osnabrück, Verden, Bremen, Paderborn, Minden, Munster, Hildesheim, and Halberstadt. The duchy of Saxony arose under the Liudolfinger in the middle of the 9th century. It furnished the Saxon line of German kings and emperors from Henry the Fowler (919) to Henry II. (1024). "The modern kingdom of Saxony has nothing but its name in common with the Saxony which was brought under Frankish dominion by Charles the Great." (*Freeman*, Hist. Geog., p. 196.) It was governed later by the house of Billing, and opposed Henry IV. Its duke Lothaire became king of Germany in 1125. Henry the Lion of Saxony and Bavaria (duke from 1139) extended the territory, but was overthrown by Frederick Barbarossa in 1180. "The duchy of Saxony consisted of three main divisions, Westfalia, Engern or Angria, and Eastfalia. . . . The duchy was capable of any amount of extension towards the east, and the lands gradually won from the Wends on this side were all looked on as additions made to the Saxon territory. But the great Saxon duchy was broken up at the fall of Henry the Lion. . . . The name of Saxony, as a geographical expression, now clave to the Eastfalian remnant of the old duchy, and to Thuringia and the Slavonic conquests to the east." (*Freeman*, Hist. Geog., p. 212.) Westphalia fell, as a duchy, to Cologne; the eastern part of Saxony fell to Bernard of Ascania; Bavaria passed to the Wittelsbach family. "The duchy of Saxony proper was granted to Bernard of Ballenstedt (Duke of Saxony 1180–1212), the founder of the Ascanian house. Of the older Saxon land his house kept only for a while the small district north of the Elbe which kept the name of Sachsen-Lauenburg, and which in the end became part of the Hanover electorate. But in Thuringia and the conquered Slavonic lands to the east of Thuringia a new Saxony arose." (*Freeman*, Hist. Geog., p. 213.) This was the later duchy of Saxony, the capital of which was Wittenberg. The strife for the electorate between the two branches of Saxe-Wittenberg and Saxe-Lauenburg was decided in favor of the former by the Golden Bull of 1356. On the extinction of the Ascanian house of Saxe-Wittenberg, the electorate and duchy were conferred on Frederick, margrave of Meissen. Thuringia was separated in 1445, and reunited in 1482. Frederick's grandsons, Ernest and Albert, united jointly from 1482 to 1485, when there was a partition of the territories, Ernest receiving the electorate, Thuringia, etc., and Albert Meissen, etc., while Osterland was divided. This was the origin of the Ernestine and Albertine lines. The elector Frederick the Wise (the son of Ernest) became a champion of the Reformation. By the capitulation of Wittenberg (1547) the electorate and various hereditaries were transferred to Maurice of the Albertine line. Saxony flourished under Maurice and his brother Augustus; suffered greatly in the Thirty Years' War, and was divided between the parties; and acquired in 1635 and 1648 Lusatia, the bishopric of Merseburg, etc. Its electors were kings of Poland from 1697 to 1763, and sided severely in the Silesian and Seven Years' wars, in which it generally opposed Prussia; sided with Prussia in the War of the Bavarian Succession; joined the Furstenbund in 1785; joined in the first coalition against France, but sided with Prussia in 1806, but went over to Napoleon; and entered the Confederation of the Rhine, and became a kingdom. (See *Meissen*, *Thuringia*, and *Saxony, Kingdom of*.) The duchy of Saxony left to the Ernestine line in 1547 soon became divided into the Thuringian petty states of Weimar, Gotha, Altenburg, Meiningen, etc. See *Saxe-Weimar-Eisenach*, etc.

In those days when it is called a stone. In early rabbinical fable it is not a worm, and is something more than a stone, being called a "creature." It is an impersonation of a supernatural force. The agency passed over to the Greeks, and the force became a plant. In the English "Gesta Romanorum" it is again a worm called Thumare. In some forms Schamir has the power of giving life or of paralyzing life.

> It bursts locks and shatters stones: it opens in the mountains the hidden treasures hitherto concealed from men; or it paralyses, lulling into a magic sleep; or again, it restores to life. I believe the varied fables relate to one and the same object — and that, the lightning.

Schiller (shil'ler), **Johann Christoph Friedrich von.** Born at Marbach, Würtemberg, Nov. 10, 1759; died at Weimar, May 9, 1805. A famous German poet, dramatist, and historian. His father, who had previously been a sergeant, entered the Würtemberg service at the outbreak of the Seven Years' War, and at the time of the birth of the poet was a lieutenant, subsequently he rose to the rank of captain, and in 1766 was given the position of park-keeper at Ludwigsburg and the dukes countryseat, Solitude. He married, in 1749, Elizabeth Dorothea Kodweiss, daughter of the landlord of the Goldene Traube in Ludwigsburg. Schiller's earliest education was obtained in the village of Lorch, and then at the Latin school of Ludwigsburg. It was his original intention to study theology, but in accordance with the demand of the duke, Karl Eugen, who in 1770 had set up a military academy at his castle, Solitude, he entered there in 1773 and began the study of jurisprudence. In 1775 the academy was removed to Stuttgart, when it received the name of the Karlsschule, and the study of medicine was added to the others. Schiller, at Stuttgart, was kept under the strictest discipline. The publication of his drama Räuber drawn upon him the displeasure of the duke, which was intensified when he went secretly to Mannheim in order to be present at its first representation. Subsequently he was forbidden by the duke to print anything which did not relate to his profession. Once more he went to Mannheim without leave, in order to read his drama Fiesko zu Genua; when it was discovered, he was condemned to a fortnight's arrest. He now determined to escape from his restraint, and the same year (1782) left Stuttgart with Streicher for Mannheim, and thence went to Darmstadt and Frankfort. Under the assumed name of Dr. Schmidt, he lived for a time at the village of Oggersheim near Mannheim, and not believing himself safe even upon that spot, accepted the invitation of Frau von Wolzogen, and took up his abode on her estate Bauerbach near Meiningen. In the meantime he had been at work on his drama Kabale und Liebe, and appeared in 1783, after having been twice rejected by the theater direction at Mannheim. This is his "Fiesko" (full title "Die Verschwörung des Fiesko zu Genua: republikanisches Trauerspiel": "The Conspiracy of Fiesco at Genoa: a Republican Tragedy"). At Bauerbach he lived until July, 1785, under the name of Dr. Ritter, engaged upon a third tragedy which he at first called "Luise Millerin," but which was published in 1784 under the name of "Kabale und Liebe" ("Love and Intrigue"). In 1785 he returned to Mannheim as Theatre-Poet, and remained poet with a stipend of 500 florins, for which he was to furnish three plays a year; to the out a support he had compiled a journal which he called Rheinische Thalia (called "Die rheinische Thalia" ("The Rhenish Thalia"), afterward "Die neue Thalia" ("The New Thalia"). His connection with the theater lasted until Nov., 1784, when he resigned. In 1785, with the advice and assistance of Christian Gottfried Korner, the father of the poet Korner, he left Mannheim for Leipsic, where he lived in April. Shortly after he went to live at the little village of Gohlis, near by, and then, that same year, accompanied Korner to Dresden: here, and in the village of Loschwitz, where his friend had a villa, he lived until 1787. In 1788 three lyrical poems had appeared in the "Thalia": "Freigeisterei der Leidenschaft" ("Free-thinking of Passion"), "Resignation," and "Die Künstler" ("The Artists"). The last written in Gohlis. In the garden-house at Loschwitz he completed the drama Don Carlos, begun at Mannheim and finally published in 1787. Unlike his preceding dramas, which are in prose, this, Schiller's successor, is written in blank pentameter. To the Dresden period belongs further a novel that was never completed, called "Der Geisterseher" ("The Spectre-Seer"). During his grown tired of his life in Dresden, he removed to Weimar, where, with the exception of the period from 1789 to 1799, he subsequently lived. In 1789 appeared his first historical work, the "Geschichte des Abfalls der Niederlande" ("History of the Revolt of the Netherlands"). Belonging also to this early time in Weimar are the poems "Die Götter Griechenlands" ("The Gods of Greece") and "Die Künstler" ("The Artists"). In 1789 he was called as professor extraordinarius of history, but without a stipend, to the University of Jena, and the succeeding year (1790) he married Lotte von Lengefeld, having previously been granted, on his application, a small stipend by the Duke of Weimar. During 1790–91 appeared his historical work, the "Geschichte des dreissigjährigen Kriegs" ("History of the Thirty Years' War"). In 1791 fell the beginning of the infirmity which, with occasional relapses, showed a marked influence upon both poets. In 1795, with the cooperation of Goethe, he founded the journal "Die Horen" ("The Hours"), which was continued till 1798. In 1796 the annual "Der Musenalmanach" ("The Almanac of the Muses") was begun under his editorship, and was published down to 1800, when it was abandoned. In it appeared the satiric epigrams, the famous "Xenien," written in collaboration with Goethe, and a number of his most celebrated poems, among them "Der Handschuh"

("The Glove"), "Der Ring des Polykrates" ("The Ring of Polycrates"), "Ritter Toggenburg" ("Knight Toggenburg"), "Der Taucher" ("The Diver"), "Die Kraniche des Ibykus" ("The Cranes of Ibycus"), and "Der Gang nach dem Eisenhammer" ("The Walk to the Forge"); "Der Kampf mit dem Drachen" ("The Fight with the Dragon"), "Das Eleusische Fest" ("The Eleusinian Festival"), and 1800 "Das Lied von der Glocke" ("The Song of the Bell"), the most popular of all his poems. In 1799 another dramawas had been completed, and the following year it was revised for publication. This is the trilogy "Wallenstein," which consists of the prelude "Wallensteins Lager" ("Wallenstein's Camp"), "Die Piccolomini" ("The Piccolomini"), a drama in five acts, and "Wallensteins Tod" ("Wallenstein's Death"), also in five acts. In 1799, further, he gave up his professorship at Jena and went back to Weimar, which was henceforth his home. The succeeding years were characterized by extraordinary dramatic productiveness. The tragedy "Maria Stuart" appeared in 1801. "Die Jungfrau von Orleans" ("The Maid of Orleans"), which he calls "a romantic tragedy," followed in 1802. This same year he was ennobled by the emperor Francis II. In 1803 appeared, further, "Die Braut von Messina" ("The Bride of Messina"), with the subtitle "Die feindlichen Brüder: Trauerspiel mit Chören" ("The Hostile Brothers: a Tragedy with Choruses"); and finally, in 1804, the drama "Wilhelm Tell." He died suddenly in 1805, still another tragedy, "Demetrius," was left incompleted at his death. His life may be divided into 3 periods. The first is that of his youth, from 1759 to 1785, which comprises his period of struggle and the "Sturm und Stress" dramas "The Robbers," "Fiesco," and "Love and Intrigue," and the lyric poems published in his "Anthologie" of 1782. A second period is the period of scientific production, in reality a time of research, from 1785 down to his intimate association with Goethe in the publication of the "Horen"; in this period fall, most especially, "Don Carlos," his historical works, and several philosophical and esthetic treatises, the principal among them being that on "Naive und sentimentalische Dichtung" ("Naive and Sentimental Poetry"), and the second period is from 1794 until his death in 1805. This is the time of his greatest productivity: in it fall the best of his poems, of which there are many besides the ballads mentioned, and the most important of his dramas. A critical edition of his complete works was published at Stuttgart, 1867–76, in 17 volumes.

Schism, The Great. 1. The division between the Latin and Greek churches, which began in the 9th century, the principal doctrinal difficulty relating to the "filioque" in the creed. The immediate occasion of communication was the intrusion by the emperor Michael III., in 857, of the learned Photius into the see of Constantinople instead of Ignatius, the legitimate patriarch. The Roman see asserted jurisdiction in the matter as possessing supreme primacy, and mutual charges of false doctrine and excommunications followed; but Photius was finally acknowledged at Rome as patriarch. The final division was that between Pope Leo IX. and the patriarch Michael Cerularius, in 1054, since which time Roman Catholics regard the Greeks or Eastern Church as out of the Catholic Church, while the Greeks claim that they have remained faithful to the Catholic creed and ancient usages.

After 1804 he traveled extensively, and was in France, Italy, Austria, and Sweden, the greater part of the time in the company of Madame de Staël, with whom he afterward also spent some time at Coppet on the Lake of Geneva. In 1818 he was made professor of esthetics and literature at the University of Bonn, where he subsequently lived, and where he died. He was several times in France, and in 1823 in England, engaged in Oriental studies. He was decided in his romances, sonnets, roles, and elegies. His first volume of poems appeared in 1800. Schleswig (shles'vig), or **Sleswick** (sles'wik), Dan. **Slesvig** (sles'vig). The northern part of the province of Schleswig-Holstein, Prussia, separated from Holstein by the Eider and the Baltic Canal. The "Danish Mark" was founded by Charles the Great. The duchy of South Jutland, fief of the Danish crown, was formed in 1232. It became known as Schleswig, and was frequently united with Holstein. In 1386, The King of Denmark was also the Duke of Schleswig and of Holstein from 1460. It was ruled by members of the Oldenburg house, and was sometimes divided and reunited. The Gottorp part of Schleswig was united with Denmark in 1713. The King of Denmark entered the Germanic Confederation for Schleswig in 1815. The dual relations of Schleswig-Holstein toward Denmark and Germany led to the Schleswig-Holstein wars of 1848–64 (see below). A provisional government of the duchies was formed in 1848; and Danish rule was restored in 1851. The question was reopened by the death of the King of Denmark in 1863. In consequence of the war of 1864, Schleswig and Holstein were handed over to Austria; and in 1865, by the Convention of Gastein, Schleswig fell under Prussian rule. After the war of 1866 both Schleswig and Holstein were annexed to Prussia. See *Holstein*.

The history of the relations of Denmark and the Duchies to the Romance-speaking people is very much part of the great Schleswig-Holstein controversy. But having been unnecessarily mixed up with two questions properly quite distinct,—that the Duchies, as belonging exclusively to Holstein, and of both jointly to the Danish crown; the second, as to the diplomatic engagements which the Danish kings have successively received with the German powers,—it has borne its part in making the whole question the most intricate and interminable that has vexed Europe for two centuries and a half. Setting aside irrelevant matter, the facts as to the Duchies are as follow: — I. The Danish kings began to own the supremacy of the Frankish Emperors early in the ninth century. Having recovered their independence, and the Danish throne having followed the fall of the Carolingian dynasty, they were again subdued by Henry the Fowler and Otto the Great, and continued tributary to the German Empire till Henry III. and the period of anarchy which followed. Since that time Denmark has always been independent, although her king was, until the treaty of 1865, a member of the German Confederation as duke of Holstein and Lauenburg. II. Schleswig was in Carolingian times Danish; the Eyder being, as Eginhard tells us, the boundary between Saxonia Transalbiana (Hadeln) and Terra Nortmannorum (wherein lay the town of Sliesthorp), inhabited by the Scandinavian heathen. Otto the Great conquered all Schleswig, and, it is said, suffered also, and added the southern part of Schleswig to the immediate territory of the Empire, erecting it into a margraviate. So it remained till the days of Conrad II., who made the Eyder again the boundary, retaining of course his suzerainty over the kingdom of Denmark as a whole. But by this time the colonization of Holstein by the Germans had begun; and ever since the numbers of the Danish population seem to have steadily declined, and the mass of the people to have grown more and more disposed to sympathize with their neighbors in the northern neighbourhours. III. Holstein always was an integral part of the Empire, as it was afterwards of the Germanic Confederation and is now of the new German Empire.

The victory of the latter at Idstedt, July 24–25, led to the restoration of Danish rule in 1851.

2. A war of Austria and Prussia against Denmark in 1864, the object of which was to prevent the incorporation of Schleswig with Denmark. His reputation as the father of letter-founders, and the inventor of matrices and the type-mould, is entirely undeserved. His types show that he had no skill as a letter cutter or mechanic. It is now possible that no one has shown such feeble evidences of mechanical ability could have been the first inventor of the matrices and the type-mould. While Gutenberg and Fust were living, Schoeffer never made the claim that he was the inventor, or even a co-inventor, of printing. But when they were buried, he claimed that he was inventor by both, and that he was really the first to enter the sanctuary of the art. In 1463 he falsely said that although Gutenberg was the first inventor, he was the man who perfected the art.

Scogan

"Gentillesse," and refers to chaucer frequently as "my maistre." He is probably the man to whom Chaucer's "Lenvoy to Scogan" was written, and is not to be confounded with a jester named John or Thomas Scogan, to whom a book called "Scoggins Jests" is attributed, and who flourished at the court of Edward IV. It is this Scogan that Shakspere introduces anachronously in the second part of "Henry IV.," iii. 2; but the Scogan to whom Jonson alludes in "The Fortunate Isles" is Henry Scogan.

Scopas (skō'pas). [Gr. *Σκόπας.*] Born in the island of Paros about 420 B.C. A celebrated Greek sculptor and architect. His first important work was the temple of Athene Alea at Tegea, built on the site of an older temple. A few fragments of the sculpture of this temple have been recovered. In its interior a Corinthian order was superimposed upon an Ionic, the first recorded use of this order. Scopas probably went to Athens about 377 B.C., and remained there 25 years, when he went to Halicarnassus to superintend the sculpture of the Mausoleum. The fragments from this monument in the British Museum probably give us our only reliable information as to Scopas's style. A doubtful passage of Pausanias makes it probable that he is represented as having executed the statue of Artemisium at Ephesus. The Apollo Citharœdus of the Vatican is always associated with Scopas as a copy of his statue. The original of this statue was by either Scopas or Praxiteles, probably Scopas. The Niobide of the Vatican may have belonged to the original group. The style of Scopas was highly dramatic and sympathetic. *Pathos* is the word by which his work is characterized in the old writers.

In 1820 he published his "History and Description of the Arctic Regions." He surveyed the east coast of Greenland between lats. 69° 30′ N. and 72° 30′ N. in 1822, and in 1823 published his "Journal of a Voyage to the Northern Whale-fishery." He now abandoned the sea, resided two years at Cambridge, and in 1825 was ordained and appointed curate of Bassingby. His especial study was ferrestrial magnetism. Scorpio (skōr'pi-ō). [L., 'the Scorpion.'] A constellation and the eighth sign of the zodiac, represented by the character ♏. The constellation, which is conspicuous in early summer in the skies of the southern United States (where the whole of the magnificent tail clears the horizon), contains the first-magnitude red star Antares (α Scorpii) and 17 of the second magnitude. With the Chaldeans and Greeks it extended over one sixth of the planetary circle, the Scorpion being represented with expanded claws (which circular space where Libra is now placed. From this irregularity it may be inferred that the constellation is older than the zodiac, which we owe to the Greeks. Libra, though later, is of no small antiquity, since it appears in the Egyptian zodiacs. Its adoption by Julius Cæsar in his calendar made it familiar. Apparently, though according to Egypt nearly two centuries later, follows Babylonian and Greek astronomers in covering the place of Libra with the Scorpion's claws. In designating the stars of this constellation by names, the Greeks, the period of the Scorpio (from the alternative Latin form *scorpius*) is used: thus, Antares is *α Scorpii*.

Scorpion, The. See *Scorpio*.

Scotists (skō'tists). The followers of Duns Scotus. His fundamental doctrine is that distinctions which the mind inevitably draws are to be considered as real, although they do not exist apart from their relations to mind. Such distinctions were called *formal*, the abstractions hence resulting *formalities*, and those who insisted upon them *formalists* or *realistes* (Middle Latin *formalitistæ*). He taught the important principle of haecceity—that individual existence is essentially incapable of no description or general conception, but is a peculiar element of being. He held that the natures of genera and species, as *animal* and *horse*, are real, and are not in themselves either general or particular, though they cannot exist except as particular nor be thought except as general. The teaching of Scotism in the English universities was prohibited by royal injunction in 1535.

Scotland (skot'land). [AS. *Scotland*, land of Scots; F. *Écosse*, G. *Schottland*, L. *Caledonia*.] A country of Europe, occupying the northern division of the island of Great Britain, and forming part of the United Kingdom of Great Britain and Ireland. Capital, Edinburgh; largest city, Glasgow. The mainland, which extends from lat. 54° 38′ to 58° 38′ N., and from long. 1° 46′ to 6° 11′ W., is bounded by the Atlantic on the west and north, the North Sea on the east, and England and the Irish Sea on the south. The country is very generally mountainous, especially in the north and west, and the Lowlands in the south and east. The chief indentations of the coast are the Moray Firth, Firths of Forth and Clyde, Loch Fyne, and Firths of Tay and Dee. The highest mountains are the Grampians, about 4,000 feet (Ben Nevis, 4,406 feet). The chief river-systems are those of the Spey, Tay, Forth, Tweed, and Clyde. Among the many islands, including Lochs Tay, Awe, Lomond, Katrine, etc., The principal islands are the Orkney Islands, the Shetland Islands, Lewis and Harris, North Uist, South Uist, Barra, Skye, Mull, Islay, Jura, and Arran. It has its centres. The kingdom is represented by 72 members in the House of Commons; and the peerage, to which no additions have been made since the Union of 1707, consists of 16 representative members appointed by the peers at the opening of each Parliament to sit in the House of Lords, in which, however, 48 of the other Scottish peers have seats by right. The religion is Presbyterian, the Episcopalians, etc. Gaelic (a Celtic language) is spoken in many parts of the Highlands. The original inhabitants were the Celts. Scotland was invaded by the Romans under Agricola in the 1st century. A wall between the Clyde and Forth was built under Antoninus and Septimius Severus. Invasions of Roman Britain by the Picts and Scots took place in the 4th and 5th centuries. In the 6th century a kingdom was founded by the Dalriad Scots: there was a settlement of Angles in the southeast; and the conversion of the Picts began by Columba. A union of Picts and Scots into the kingdom of Albania or Scotia was effected in the 9th century. From the 9th century to the 11th there were raids by the Danes and Norwegians, who settled in the Hebrides especially in the Orkneys and Shetlands. King Malcolm II. achieved the conquest of Lothian in 1018. In the struggles between England and Scotland, the latter was frequently overrun by the former, but no territory was lost. The kingdom prospered in the 12th and 13th centuries, especially under the three Alexanders. The death of Margaret, the Maid of Norway, granddaughter of Alexander III., led to a notable dispute about the succession, and to the interference of Edward I. of England in Scottish affairs. Edward's claim to the Overlordship of Scotland in which Baliol was virtually dethroned, Baliol (see *Baliol, John de*) was chosen king in 1292. He paid homage to Edward, but afterward renounced the allegiance. The struggle for independence which was really a struggle on Edward's part for sovereignty and on Scotland's for independence. Scotland was invaded by Edward in 1296. The Scots under Wallace were defeated at Falkirk in 1298. On the death of Wallace in 1305, Robert Bruce succeeded as national leader, and was crowned king in 1306. The independence of Scotland was practically won by the victory of Bannockburn in 1314, and was recognized by Edward III. in 1328. Robert II. (who succeeded in 1371) the son of Bruce's daughter Marjory, was the first sovereign of the Stuart dynasty. In 1513 the Scots under James IV. invaded England and suffered a disastrous defeat at Flodden, Sept. 9. The following are important events: the regency of Mary Queen of Scots, 1542–67; introduction of the Reformation, 1560; invasion by the English under Somerset, and defeat at Pinkie, 1547; accession of James VI., king of Scotland, to the throne of England as James I., 1603; success of the Covenanters against Charles I., 1639–40; persecution of the Covenanters under Charles II. and James II.; battle of Bothwell Bridge, 1679; the two kingdoms of England and Scotland, 1707; Jacobite insurrections 1715 and 1745 [illegible] 1902 square miles. Population (1901), 4,472,103.

When the disputed relations between the English and Scottish crowns began, the names of England and Scotland seem not to have been in use at all. And if we choose to use them as convenient ways of expressing the English and Scottish territories, they should, we must never still remember that the limits of these territories in no way answered to the modern limits of England and Scotland. Part of modern England was not yet English, and a very large part of modern Scotland was not yet Scottish. The growth of the Scottish nation and kingdom is one of the most remarkable facts in history. It was to come by the union together of certain portions of all the three races which in the Dark Ages came to be inhabitants of the Island of Britain. Those three races may be most conveniently spoken of as English, Welsh, and Irish.

He was the son of Walter Scott, a writer to the signet, and Anne Rutherford, daughter of Professor John Rutherford of Edinburgh. He became lame in infancy. In 1779 he was sent to the Edinburgh high school, and later studied at the university and read for the bar. He was admitted a member of the Faculty of Advocates in 1792, and in 1799 was made sheriff of Selkirkshire, and in 1806 one of the clerks of session. In 1797 he married Miss Charpentier (or Carpenter), daughter of a French refugee. Becoming inter-

ested in the new German romantic literature in 1788, he published translations of Burger's ballads in 1796, and in 1799 a translation of Goethe's "Götz von Berlichingen." The "Minstrelsy of the Scottish Border" appeared 1802–03, and the first of his poems, "The Lay of the Last Minstrel," in 1805. How were published by Ballantyne (which see), he established an unfortunate partnership in business. This was followed by the poems "Marmion" (1808), "The Lady of the Lake" (1810), "The Vision of Don Roderick" (1811), "Rokeby" (1813), "The Bridal of Triermain" (1813), "The Lord of the Isles" (1814), "The Field of Waterloo" (1815), and "Harold the Dauntless" (1817). In 1814–15 he wrote several chapters of a Scottish novel of the time of the last Jacobite rebellion; this was looked at in 1816, but was again laid aside till 1814, when it was completed and published anonymously (duly Tuesday the 1st of "Waverley, or 'Tis Sixty Years Since." It was the first of those masterpieces, the "Waverley Novels," which place Scott in the front rank of the writers of fiction. The following is the list of them, with the dates: "Guy Mannering" (1815), "The Antiquary" (1816), "Old Mortality" (1816), "The Black Dwarf" (1816), "The Heart of Mid-Lothian" (1818), "The Bride of Lammermoor" (1819), "The Legend of Montrose" (1819), "Ivanhoe" (1820), "The Monastery" (1820), "The Abbot" (1820), "Kenilworth" (1821), "The Pirate" (1822), "The Fortunes of Nigel" (1822), "Peveril of the Peak" (1823), "Quentin Durward" (1823), "St. Ronan's Well" (1824), "Redgauntlet" (1824), "The Betrothed" (1825), "The Talisman" (1825), "Woodstock" (1826), "The Two Drovers" (1827), "The Highland Widow" (1827), "The Surgeon's Daughter," "The Fair Maid of Perth" (1828), "Anne of Geierstein" (1829), "Count Robert of Paris" (1831), and "Castle Dangerous" (1831). His earliest printers and publishers were the Ballantynes with whom he formed a secret partnership. The publishing business was successful—mainly, it would appear, from the production of costly works for which there was but a limited demand. In 1818 and later his publishers were partnered by Constable, and when that publisher failed in 1826, the novelist was involved to the amount of £120,000—in addition to which he had private debts of £40,000. The purchase of the estate of Abbotsford, and the erection, adornment, and maintenance of the mansion (which he occupied from 1812 till his death) had been a main cause of his embarrassment. He struggled manfully to meet his liabilities; and by his publications (written, after the failure, in gradually failing health), and the disposal of copyrights after his death, his creditors were paid in full. The writer of the novels long remained "the Great Unknown"; extraordinary precautions were taken to conceal the authorship, and the vast amount of literary work done by Scott under his own name helped to preserve the secret of his identity. It was not till Feb. 23, 1827, that he publicly confessed himself "the tarl and undivided author." He was the first on whom the title of baronet was conferred (1820) by George IV. He edited the works of Dryden (1808: in 18 vols., with life) and of Swift (1814: in 19 vols., with life), and wrote, in addition to the work mentioned above, "Life of Napoleon (9 vols. 1827), "Tales of a Grandfather" (1827–30), "History of Scotland" (1829–30), "Letters on Demonology and Witchcraft" (1830), and, besides numerous introductions, prefaces, and articles in magazines and reviews, His "Familiar Letters" were published in 1894. A biography of Scott, by his son-in-law, J. G. Lockhart, appeared 1836–38.

Naturally bright and clever, she was not slow to assert her ability in the literary circle of the Hôtel de Rambouillet. When these famous gatherings broke up as a partial result of the internal troubles that attended the minority of Louis XIV., Mademoiselle de Scudery was able to command her own salon, meeting every Saturday. Her first novel, "Ibrahim, ou l'Illustre Bassa," appeared in 1641 under her brother's name. Encouraged by its success, she affixed her own signature to the two works for which she is best known, "Artamène, ou le grand Cyrus" (1650) and "Clélie, histoire romaine" (1656). Of the nomadic tribes of the Scythians are mentioned the Aorses north of the Caspian Sea, extending to the Jaxartes; south and east of them, the Messagetæ and the Sacæ (modern Kirghese). In the 8th century B. C. Scythian hordes, strengthened by the Cimmerians (which see), invaded Media, next Armenia and Assyria, reaching over Syria and Palestine to the frontiers of Egypt, and leaving everywhere behind them desolation. Many exegetes assume that Ezekiel, in his description of the hosts of Gog and Magog (ch. xxxviii. and xxxix.), alludes to this invasion. They scattered and were disintegrated, some of them having been killed, others returning to the north, and still others remaining in the countries they invaded.

Alp-Arslan was followed in 1072 by his son Malik Shah, on whose death in 1092 the succession was disputed. Civil war ensued, which resulted in the partition of the empire among several of the Seljukian family, of which the principal branch ruled in Persia, and three younger branches at Konieh, Damascus, and Ispahan respectively. Their name means 'separatist' or 'renegade.'] A tribe of North American Indians composed of the members of the Creek Confederacy who during the 18th and the early part of the 19th century left the main body and settled in Florida. They were engaged in two wars with the United states (1817–18 and 1835–42). That of 1817–18 was occasioned by their depredations on the frontier settlements of Georgia and Alabama. General E. P. Gaines destroyed an Indian village on the refusal of the inhabitants to surrender certain alleged murderers, and the Indians retaliated by waylaying a boat ascending the Apalachicola with supplies for Fort Scott, and killing 34 men and a number of women. General Jackson took the field against the Indians in March, 1818, after a short but sharp campaign destroyed the Seminole villages in the neighborhood of the present city of Tallahassee, in April. He court-martialed and executed two British subjects, Arbuthnot and Ambrister, who were among the advisers, and whom he accused of stirring up the Indians, and on May 24, 1818, entered the Spanish town of Pensacola, which he claimed had given refuge to the savages. The war of 1835–42 was the most bloody and stubborn of all those against Indian tribes. It originated in the refusal of a part of the tribe to cede their Florida lands and remove to the Indian Territory according to a treaty ratified in 1834. Osceola was the Seminole leader, and the war was conducted with varying success under Scott, Call, Jesup, Taylor, and others, till the subjugation of the Indians in 1842. The number of Seminoles finally removed in 1845 was officially reported as 3,824. Those who reached the Indian Territory constituted one of the five "civilized tribes," now numbering about 5,000, including negroes and adopted whites, and more than 200 remain in southern Florida. Semiramis (se-mir'a-mis). [Assyr. *Sammuramat*, loving doves; Gr. *Σεμίραμις.*] In the Greek historiographers, wife of Ninus the founder of Nineveh. She was the daughter of the Syrian goddess Derketo, and was endowed with surpassing beauty and wisdom. She assumed the government of Assyria after her husband's death; built the city of Babylon with its hanging gardens, the temple of Bel, and the bridge over the Euphrates; conquered Egypt, Ethiopia, and Libya; and organized a campaign against India: in short, everything marvelous in the Orient was ascribed by the Greeks to the supernatural queen. These statements of Greek writers find no confirmation in the cuneiform monuments. Some of the exploits of Semiramis are identical with those recorded of the goddess Ishtar in the so-called Nimrod epic. It is possible, however, that there was some historical foundation for these legends, as the name Sammuramat occurs in the inscriptions as the queen of Ramman-Nirari III. (811–782 B. C.). She is the only Assyrian queen whose name is recorded on the monuments.

Semites (sem'its). The descendants, or supposed descendants, of Shem, son of Noah: a name given by Eichhorn to the Hebrews and allied races in southwestern Asia and eastern Africa.

The true Semite, whether we meet with him in the deserts and towns of Arabia, in the bas-reliefs of the Assyrian palaces, or in the lanes of some European ghetto, is distinguished by ethnological features as definite as the philological features which distinguish the Semitic languages. He belongs to the white race, using the term "race" in its broadest sense. But the division of the white race of which he is a member has characteristics of its own so marked and peculiar as to constitute a special race — or, more strictly speaking, a sub-race. The hair is glossy-black, curly and strong, and is largely developed on the face and head. The skull is dolichocephalic. It is curious, however, that in Central Europe an examination of the Jews has shown that while about 15 per cent. are blonds, only 25 per cent. are brunettes, the rest being of intermediate type, and that brachycephalism occurs almost exclusively among the brunettes. It is difficult to account for this except on the theory of extensive mixture of blood. Whenever the race is pure, the nose is prominent and somewhat aquiline, the lips are thick, and the face oval. The skin is of a dark white, which tans but does not redden under exposure to the sun. There is usually, however, a good deal of colour in the lips and cheeks. The eyes are dark like the hair. *Sayce*, Races of the O. T., p. 77.

Senate. [L. *senatus*, from *senex*, old.] **1.** In ancient Rome, a body of citizens appointed or elected from among the patricians, and later from among rich plebeians also, or taking seats by virtue of holding or of having held certain high offices of state. Originally the senate had supreme authority in religious matters, much legislative and judicial power, the management of foreign affairs, etc. At the close of the republic, under, and under the empire, the authority of the senate was little more than nominal. The original senate of the patricians numbered 100; after the adjunction of the Sabines and Luceres, the number became 300, and so remained with little change until the supremacy of Julius Cæsar made the number 900, and after his death it became over 1,000, but was reduced to 600 by Augustus, and varied under subsequent emperors.

A senator must be at least 30 years of age, 9 years a citizen of the country, and a resident of the State from which he is chosen. Senators are elected by the State legislatures, and for 6 years, but the terms of one are so arranged that one third of the members retire every 2 years. In addition to its legislative functions, the Senate has power to confirm or reject nominations and treaties made by the President, and also tries impeachments. The Vice-President of the United States is the president of the Senate: in his absence it chooses president *pro tempore*. The upper house of the Canadian Parliament is also called the Senate: its 80 members are appointed by the crown for life.

Seneca (sen'e-kä). [Pl., also *Senecas.*] A tribe of North American Indians. The name is foreign to their language, and is probably a corruption of a word meaning 'red paint.' They called themselves by a name meaning 'people of the mountain.' The French called them Tsonontouan. They were allied with the Mohawk in the glory of the Iroquois Confederacy, and were conspicuous in the wars west of Lake Erie. When first known they occupied the land in western New York between Seneca Lake and the Genesee River. On the defeat of the Erie and the Neutor tribes, they took possession of the territory west to Lake Erie and south along the Allegheny in Pennsylvania, and received by adoption many of the conquered peoples, by which they became the largest tribe of the confederacy. They sided with the British in the Revolution, but did not generally change their homes. Their present (1893) number is about 3,000. See *Iroquois*.

Seneca, Lucius Annæus. Born at Corduba about 4 B. C.: died at his villa near Rome, 65 A. D. A celebrated Roman Stoic philosopher. He was the son of M. Annæus Seneca and Helvia, and when a child was brought by his parents to Rome, where he studied rhetoric and philosophy and rose to prominence as a pleader of causes. He was a senator under Caligula. In the first year of the reign of Caligula's successor, Claudius (41), he was banished to Corsica at the instigation of the empress Messalina, who accused him of improper intimacy with Julia, the daughter of Germanicus. He was recalled in 49 through the influence of Agrippina, the new wife of Claudius, who intrusted him with the education of her son Nero. On the accession of his pupil in 54 he obtained virtual control of the government, which he exercised in concert with the pretorian prefect Burrus. The restraint which his counsel imposed on the emperor made his tenure of power precarious, and on the assassination of Burrus in 62 he petitioned for permission to retire from the court. The permission was withheld: nevertheless he withdrew from the management of affairs. He was ultimately charged with complicity in the conspiracy of Piso, and took his own life in obedience to the order of Nero. His writings consist of the prose works "De ira," "De consolatione ad Helvian matrem liber," "De consolatione ad Polybium liber," "Liber de consolatione ad Marciam," "De providentia liber," "De animi

tranquillitate," "De constantia sapientis," "De elementia ad Neronem Cæsarem libri duo," "De brevitate vitæ ad Paulinum liber," "De vita beata ad gallionem," "De otio aut necessitate sapientis," "De beneficiis libri septem," "Epistolæ ad Lucilium," "Apocolocyntosis," and "Quæstionum naturalium libri septem"; and the tragedies "Hercules," "Troades," "Phœnissæ" or "Thebais," "Medea," "Phædra" or "Hippolytus," "Œdipus," "Agamemnon," "Thyestes," "Hercules Œteus," and, according to some, "Octavia."

Sennacherib (se-nak'e-rib). [Assyr. *Sin-aheerba*, Sin (the moon-god) increase the brothers.] King of Assyria 705–681 B. C., son and successor of Sargon: one of the great Assyrian monarchs, and well known in biblical history. He was first engaged, like his father, in many bloody wars against the Babylonian and Elamite alliance headed by Merodach-baladan, the hereditary foe of Assyria. These ended with the entire subjection of Babylonia in 693, and the defeat of Elam in the memorable battle of Halule in 691 B. C. (see *Elam.*) Of his further expeditions, which according to Greek and cuneiform accounts reached as far as Cilicia in Asia Minor, where he is supposed to have founded the city of Tarsus, may be mentioned that against Phenicia and Palestine known from the Old Testament. (Concerning the relation of the biblical account to that of the cuneiform inscriptions, see *Hezekiah* and *Jerusalem.*) The expedition was provoked by the coalition of Phenicia, Palestine, and the principalities of Syria with Egypt, Mesopotamia's rival for the supremacy over Asia, and its object was to isolate Egypt. The bulk of the Assyrian army met the forces of the coalition at Eltekeh (Assyrian *Altaku*). The battle seems to have been indecisive. The siege of Jerusalem had to be given up on account of a pestilence which broke out in the Assyrian army. Like Sargon, Sennacherib indulged in building, and endeavored to promote the welfare of the country by introducing improvements. His reign was of special importance for the history of the city of Nineveh, which, after having long been neglected, was again raised by him to the dignity of a capital, and restored to unprecedented splendor and glory. While praying in a temple he was murdered by two of his sons, who fled to Armenia (Ararat).

Sent (sent), or **Senta** (sen'tä). An Egyptian king. See the extract.

> It is even possible to go back for another 500 years, when we come at last to the very earliest extant inscription in the world. This venerable record is a tablet now in the Ashmolean Museum at Oxford, which was erected by Sent, a king of the second dynasty, to the memory of Shera, who appears to have been his grandson. According to the chronological scheme of M. Mariette, King Sent must have reigned about 5000 B. C. But, as will presently be shown, this very inscription, the oldest written record in existence, affords conclusive proof that even at that distant date, some 50 or 70 centuries, the hieroglyphic writing was already an extremely ancient graphic system, with long ages of previous development stretching out behind it into a distant past of almost inconceivable remoteness. *Taylor,* The Alphabet, I. 56.

Separad (sef'a-rad). A region where deported Israelites lived. Its geographical location is uncertain. The Septuagint renders it by Ephratha, the Vulgate by Bosphorus. Some identify it with Sparda which occurs in the Persian cuneiform inscriptions, and which is supposed to represent Sardis and Lydia, others with Separda in the southwest of Media mentioned in sargon's inscriptions—still others with Sepad, a mountain southwest of Hamath. In Spain the children of the Exile and Jewish proselytes reside. In the Spanish mediæval and modern Jewish writings the name always designates Spain.

Sepharvaim (sef-ar-vā'im). In the Assyrian inscriptions, Sippara, a city in Mesopotamia on the left bank of the Euphrates. It was situated in the "Royal Canal" or the "Canal of Agade," one part being originally called Sippar, the other Agade; but the names of Agade, it seems, was lost in the deepest time, and both cities became one. In the cuneiform inscriptions the two portions of the city are distinguished as "Sippar of Shamash" and "Sippar of Anunit," being centres of the cult of the sun-deities. The temple of Shamash, the sun-god called Ebabbara, was also consecrated to the worship of Molech, who was the sun-god in his destructive aspect. This agrees with 2 Kings xvii. 31, according to which Israelites from Sepharvaim settled in Samaria "and burnt their sons with fire to Adrammelech and Anammelech": Sepharvaim is now represented by the ruins of Abubabbe where in 1881, Hormuzd Rassam discovered the temple of the sun-god.

The modern Sefurieh numbers about 4,000 inhabitants.

September, Massacres of. A series of murders perpetrated by the extreme revolutionists in Paris, Sept. 2–6, 1792, the victims being royalists and constitutionalists confined in prison. The massacres were undertaken by the Commune of Paris, and were occasioned by the consternation felt over the approach of the Prussians, whose avowed object was to restore the king.

> Danton believed that before going forth to conquer foreign enemies it was necessary to exterminate those at home, at least to "strike terror to the royalists." He ordered, or allowed, Marat and Panis, the revolutionary chief, the frightful massacres of September 2–6. A band of four or five hundred assassins, hired by the Commune, took possession of the prisons. Some of them constituted themselves a tribunal, others were executioners. The prisoners were called, and after a few questions they were set at liberty or led into the courtyard of the prison and despatched with sabres, pikes, axes, and clubs. After having killed the political prisoners, they murdered prisoners of all classes. The number killed amounted to nine hundred and sixty-four. *Brown,* Rise of France, 300, 301.

[From L. *septuaginta*, seventy.] A Greek version of the Hebrew Scriptures made, according to tradition, by 70 translators: usually expressed by the symbol LXX ('the Seventy'). The legend is that it was made by seventy-two persons in seventy-two days. It is said by Josephus to have been made in the reign and by the order of Ptolemy Philadelphus, king of Egypt, about 270 or 280 B. C. It is supposed, however, by modern critics that this version of the several books is the work not only of different hands but of separate times. It is probable that at first only the Pentateuch was translated, and the remaining books gradually; but the translation is believed to have been completed by the 2d century B. C. The Septuagint is written in the Hellenistic (Alexandrine) dialect, and is linguistically of great importance from its effect upon the diction of the New Testament, and as the source of a large part of the religious and theological vocabulary of the Greek fathers, and (through the Old Latin version of the Bible and the influence of this on the Vulgate) of that of the Latin fathers and also of all western nations to the present day. In the Greek Church the Septuagint has been in continuous use from the earliest times, although other Greek versions (see *Hexapla*) were anciently also in circulation, and it is the Old Testament still used in that church. The Septuagint contains the books called Apocrypha intermingled among the other books. It is the version most of which most of the citations in the New Testament from the Old are taken.

It was explored by Mariette in 1851. See *Serapis* and *Sakkara*.—**2.** A famous temple of Serapis in ancient Alexandria, destroyed by Theodosius. See the extract, and that under *Serapis*, below.

The Serapion, at that time, appeared secure in the superstition which connected this inviolable sanctuary, and the honor of its god, with the rise and fall of the Nile. With the fertility and existence of Egypt, and, as Egypt was the granary of the East, the existence of Constantinople. The Pagans had little apprehension that the Serapion itself, before many years, would be levelled to the ground. The temple of Serapis, next to that of Jupiter in the Capitol, was the proudest monument of Pagan religion; and the arts of Greece had been employed, in the decline of the East, and that of Jerusalem in its glory, it comprehended within its precincts a vast mass of buildings, of which the temple itself formed the center. It was built on an artificial hill, in the old quarter of the city, called Rhacotis, to which the ascent was by a hundred steps. All the substructure was vaulted over; and in these dark chambers, which communicated with each other, were supposed to be carried on the most fearful and, to the Christian, abominable mysteries. All around the spacious level platform were the habitations of the priests, and of the ascetics dedicated to the worship of the god. Within these outworks of this city rather than temple was a square, surrounded on all sides with a magnificent portico. In the center arose the temple, on pillars of enormous magnitude and beautiful proportion. The work either of Alexander himself or of the first Ptolemy appeared to have colossal grandeur of Egyptian with the fine harmony of Grecian art. *Milman*, Hist. of Christianity, III. 150.

Serapis was the dead Apis, honored under the attributes of Osiris; he was lord of the under world and identified with that Greek Hades. His worship was a combination of Egyptian and Greek cults, and was favored by the Ptolemies for political reasons. See *Serapeum*.

Egyptian and Greek met as worshippers of Serapis. The Serapis of Egypt was said to have been worshipped for ages at Sinope; he was transported from that city with great pomp and splendor, to be reincorporated, as it were, and refashioned with his ancient prototype. . . . The colossal statue of Serapis [in the serapeum] embodied these various attributes. It filled the sanctuary: its outstretched and all-embracing arms touched the walls; the right the one, the left the other. It was said to have been the work of Sesostris; it was made of all the metals fused together — gold, silver, copper, iron, lead, and tin; it was inlaid with all kinds of precious stones; the whole was polished, and appeared of an azure color. The measure or bushel, the emblem of productiveness or plenty, crowned its head. By its side stood the symbol of three-headed animal, one in the fore-part of a lion, one of a dog, one of a wolf. In this the Greeks saw the type of their poetic Cerberus. The serpent, the symbol of eternity, wound round the whole, and returned resting its head on the hand of the god. *Milman*, Hist. of Christianity, III. 151–152.

The greater part of the country was occupied by Austria 1716–1739. A rising against the Janizary George in 1804 resulted in the expulsion of the Turks, but they reconquered the country in 1813. A rising in 1815 under Milosh Obrenovitch who was elected prince in 1817 was more successful, and Servia became practically independent. The Turkish garrisons were withdrawn in 1867. The river above the falls is nearly a mile wide, and is divided into many small channels. Traversing shallows in broad plains, the waters gather themselves in circular eddies, whence they flow in falls varying from 30 feet to 60 feet in pitch. These encircle islets, which are quite independent of each other, ranging in area of about two miles in its stretch; they are detached, like giant cauldrons yawning unexpectedly at one's feet, in which the flood seethes with incredible fury; every one of these has opened for itself a narrow orifice in the rock through which, like a storm-rushing, the water is hurled into the cavity below. The width of these outlets rarely exceeds 15 yards, but their depth cannot be estimated. The falls empty themselves into one central channel, about 60 feet wide, rushing into it with astounding velocity. — *Leonardo de Bastos*, Paraguay.

Elsewhere the Prussians were almost uniformly successful; but their Italian allies were defeated on land at Custozza June 24, and on sea at Lissa July 20. He was educated at Cambridge and the Inner Temple, but deserted the law for literature. He is chiefly remembered for his quarrel with Dryden, who revenged Shadwell's attack upon him in "The Medal of John Bayes" by mercilessly satirizing him in "MacFlecknoe," and as "Og" in the second part of "Absalom and Achitophel." He succeeded Dryden, however, as poet laureate and historiographer royal in 1688 (when Dryden would not take the oath), notwithstanding his predecessor's satire in "MacFlecknoe,"

> "The rest to some faint meaning make pretence,
> But Shadwell never deviates into sense."

Shadwell was heavy, but not so dull as Dryden saw fit to depict him. His plays are coarse and witty. Among them are "The Sullen Lovers, or the Impertinents" (1668), "The Humorists," "Psyche" (an opera), "Epsom Wells," "The Virtuoso," "The Libertine," "The True Widow" (a comedy to which Dryden wrote an epilogue in 1678, before their quarrel), "The Lancashire Witches, etc.," "The Squire of Alsatia," "Bury Fair," "The Volunteers." His son, Charles Shadwell, was the author of several plays sometimes confounded with Thomas Shadwell's. They are "The Fair Quaker of Deal, or the Humours of the Navy" (1714; Hester Sandlow played Dorcas in this play and continued largely to this success), "The Humours of the Army" (1716), "Rotherie O'Connor," "The Sham Prince," etc.

At the time of Lewis and Clark's visit (1804-05), the Shahaptian tribes had horses; they knew nothing about agriculture. They have always been considered warlike, but in 1804 they seem to have acted entirely on the defensive against the tribes on the Platte and Missouri rivers, who had obtained firearms. At that time the Chopunnish were living in communal houses. This stock now numbers about 2,800 persons.

There is also a Shahnamah in Turkish, written by Firdausi at Thauli, and recounting the history of all the kings of the East. Shakas (shä'kas). In the history of India, a people identified with the Sakai and Saxe of classical writers (the Indo-Scythians of Ptolemy), who about the beginning of the Christian era extended along the west of India to the mouths of the Indus. They were probably Turks or Tartars. About the middle of the century B.C. they were met by a general league of Hindu princes. The Guptas shared in the league, and possibly led it. A great battle was fought at Ujjain, the ancient capital of Malwa, for the great desert of Marwar. The Indo-Scythians were utterly defeated and lost their place in history. The battle of Kahrur was probably fought about B.C. 78. It is said that the era "Vikrama," as Hindu writers call it, or Samvat, as Shaivahana era in consequence of this battle.

Shakspere (shäk'spēr, originally shak'spēr), **William.** [Also *Shakespeare*, *Shakespear*, *Sharper*, and many other forms, the proper modern form etymologically being *Shakspere*, as in the 1663 impression of the third folio and the fourth folio of the dramatist's works: bit, 'one who shakes a spear,' orig., like *Brakespear*, a complimentary or sarcastic name for a knight or soldier; from *Shake* and *spear*.] Born at Stratford-on-Avon, April, 1564 (baptized April 26); died there, April 23, 1616 (buried April 25). A famous English poet, the greatest of dramatists. Little is known of his life. He was the first son and the third child of John Shakspere, a glover, and Mary Arden, both children of husbandmen. His parents were possessed of a little property, and the father held various public offices (constable, alderman, and high bailiff) in Stratford: but their prosperity did not survive the poet's boyhood. Whereupon when Shakspere married, in November, 1582, he took out a bond (in which the name is written *Shagspere*) for license of marriage with Anne (or Agnes) Hathaway, in Shottery, who was eight years his senior. (Her birthplace was bought for the nation in 1892.) The date of the religious ceremony is not known. A child, Susanna, was born to them May 26, 1583, and on Feb. 2, 1585, twins, Hamnet and Judith. About 1587 Shakspere went to London to seek his fortune in connection with the stage, and became an actor, probably in Lord Leicester's company of players. Aubrey's well-authenticated story that Shakspere at Charlecote is a fable; but there may be truth in Davenant's story that he held horses at the theater door.) Shakspere had the advantage of being associated with Alleyne, the best tragic actor in England, and with Kempe and Pope, the best comedians. Greene, Kyd, Marlowe, Wilson, Peele, Lodge, Lyly, Munday, and others were all at this time writing plays for the different companies playing in the London theaters; and as early as 1589 or 1590 Shakspere was part author or reviser of some of the plays owned by his own company. Lord Strange's men. It was this collaboration that induced Greene, his rival playwright, to allude to him in his "Groatsworth of Wit" as "an upstart crow, beautified with our feathers, that with his Tiger's heart wrapped in a player's hide, supposes he is as well able to bombast out a blank verse as the best: and, being an absolute Johannes-fac-totum, is in his own conceit the only Shake-scene in a country." About 1593 he ceased to work as a collaborator, and in reviving the plays produced at this period seems to have taken out the work of the other hands, substituting lines of his own. In 1603 Lord Strange's men played at the Rose Theatre. At Lord Strange's death in this year the company became "The Chamberlain's," and with Shakspere and Burbage played at "The Theatre." After this time Shakspere was one of the chief actors in the best company in London, and its acknowledged play-writer, and attained fame as a poet as well. His son Hamnet having died in 1596, Shakspere went for a short time to Stratford. He obtained a grant of arms, and in 1597 bought New Place. In this year the Chamberlain's Company removed to "The Curtain," and about this time Ben Jonson began to write for them. Shakspere lived at this time in St. Helen's, Bishopsgate, with occasional absences in Stratford. In 1598 he played in Ben Jonson's "Every Man in his Humour." The Globe Theatre was opened in 1599, and after this Shakspere's plays were first produced here. In 1601 the Chamberlain's Company traveled, having theatre obnoxious to the court for playing "Richard II." They played at Oxford and Cambridge, and also went to Scotland. In this year Shakspere's father died. The turbulent quarrel known as "the war of the theaters," which had raged since 1599 between Jonson, Dekker, Chapman, Marston, Shakspere, and others, seems to have been composed about 1602. The plays produced between these years are filled with bitter personal allusions. In this latter year the Chamberlain's Company went back to the court. In 1603 the theaters were closed on account of the plague; the queen died; and the chamberlain's men took the name of "The King's Company." In 1605 Shakspere invested money in a lease of the tithes of Bishopton, Welcombe, Stratford, and old Stratford. In 1607 his daughter Susanna married John Hall, a physician at Stratford, and his brother Edmund died. His mother died in 1608. In 1610 he retired from the theater, and was living in Stratford in 1611. In 1613 he bought a house near Blackfriars Theatre, and in 1614 was in London, and it is thought that at this time Shakspere sold his shares in the Globe and Blackfriars theaters. Little is known of his life in Stratford after his retirement from the stage, but his name appears in documents until 1615. On Feb. 10, 1616, his daughter Judith married Thomas Quiney, a vintner. Shakspere died the following April 23, supposed on the 23d, which is also celebrated as his birthday. Shakspere's poems are "Venus and Adonis" (entered on the "Stationers' Register" 1593), "The Rape of Lucrece" (1594), "Sonnets" (not published till 1609, but supposed to have been written 1594–98), "A Lover's Complaint" (published with the "Sonnets," probably written about 1590). The sonnets are 154 in number, and are addressed with a dedication by the publisher, Thomas Thorpe, to "Mr. W. H.," "their only begetter," about whom controversy has raged. The "Passionate Pilgrim" was published in 1599. A volume called "Poems: written by Wil. Shakespere, Gent.," was published in 1640. It contains many poems now known not to be Shakspere's. In 1709 the famous Ireland forgeries were published (see *Ireland, W. H.*). The authenticity of Shakspere's plays was first discussed in 1848 by J. P. Collier in "The Romance of Yachting." He was followed by others, notably by Miss Delia Bacon in 1857 and by Nathaniel Holmes in 1866 and 1886, and by Ignatius Donnelly, all striving to prove that Bacon was the author. About 500 works on Shakspere have appeared on the subject. In the following list the date of first production of the plays is given as nearly as possible: but references to publication refer to the quarto copies. "Love's Labour's Lost" (1589–revised in 1597), "Two Gentlemen of Verona" (1591 and 1595), "Romeo and Juliet" (1591 and 1596), "Henry VI. (in three parts, 1592–94), "A Comedy of Errors" (1594), "King John" (1591 [?], 1594), "Titus Andronicus" (c. 1594), "A Midsummer Night's Dream" (1595), "King Richard II." (1595), "The Merchant of Venice" (1596), "The First Part of King John" (in two parts, 1597 and 1598), "Much Ado about Nothing" (1598), "As you Like it" (1599), "Henry V." (1599), "Merry Wives of Windsor" (1600), "Troilus and Cressida," "Julius Cæsar" (1600), "Hamlet" (1601) "Macbeth" (1601), "All's Well that Ends Well" (1604), "Twelfth Night" (1602), "The Tempest" (1610), "Measure for Measure" (1604), "King Lear" (1605), "Antony and Cleopatra" (1607), "Timon of Athens" (1607–08), "Coriolanus" (1608), "Pericles" (1608), "Cymbeline" (1609). The Tempest" (1611), "The Winter's Tale" (1610), "King Henry VIII." (1613). The doubtful plays were first attributed to Shakspere in the 1664 issue of the third folio: they are "The Two Noble Kinsmen," "Sir John Oldcastle," "The London Prodigal," "Thomas Lord Cromwell," "Sir John Oldcastle," "The Puritan Widow," "Locrine," and "A Yorkshire Tragedy." "Arden of Feversham," "The Birth of Merlin," and other plays have also been attributed to him. Some of the plays were printed in quarto during Shakspere's lifetime. The first collected edition of them was that in the second folio appeared in 1632, a third in 1663 and 1664, a fourth in 1685. Rowe issued the first critical edition of the plays with the poems in 1709. Among the many later editions may be mentioned that of Pope and Theobald (1725), Johnson and Steevens (1773), Malone (1790), Boydell's edition, revised by Steevens (1802), Bowdler's expurgated edition (1818), Knight's pictorial edition (1838–43), Halliwell and later), Halliwell (1855), Dyce (1857), Richard Grant White (1857–65 and 1883), Hudson (1849), Cambridge edition (1863–66), Furness (1871–), and Rolfe. Shaktas (shäk'taz). [Skt. *shākta*, relating to Shakti (which see).] In India, the worshipers of the divine power under its female representation. As Hinduism has resolved itself into two great systems (Shaivism and Vaishnavism), so the religious creed of these are divided into two great classes (the Dakshinamargis and the Vamamargis). Both are Shaktas, but the first, the 'followers of the right-hand path,' worship Shiva and Vishnu in their double nature as male and female, do not show undue preference for the female or left-hand side of the deity, and are not addicted to mystic or secret rites; while the second, the Vamamargis, or 'followers of the left-hand path,' worship exclusively the female side of Shiva and Vishnu. The former find their Bible in the Puranas, the latter in the Tantras. The rites of the latter are orgiastic, and represent the most corrupt development of Hinduism.

Shakti (shak'ti). In Sanskrit, 'strength, energy,' and then in Hindu religion the energy or active power of a deity personified as his wife and worshiped under various names. Fifty different forms of the Shakti of Vishnu besides Lakshmi are reckoned, and fifty of the Shakti of Shiva besides Durga or Gauri. Brahmanism holds that the One Universal Self-existent Spirit is pure existence. The universe becomes conscious, his nature becomes duplex; and this double nature is held to be partly male and partly female, the female constituting his wife's side. The male side of the god is believed to relegate his more onerous functions to the female; hence the female side of the personal god is more often propitiated than the male. See *Shaktas*.

Shakuntala (shä-kön'tä-lä). The heroine of the great drama of Kalidasa. She was the daughter of the sage Vishvamitra by the nymph Menaka, and was left at birth in a forest where she was nourished by birds until found by the sage Kanva, who brought her up in his hermitage as his daughter. In the drama she is seen in the forest by King Dushyanta, who has gone there to hunt. He induces her to contract with him a Gandharva marriage — that is, one formed by a simple declaration of mutual acceptance. On leaving her to return to his capital, he gives her a ring. When Shakuntala goes back to the hermitage, she does not heed the approach of the testy sage Durvasas, who pronounces upon her the curse of being forgotten by her beloved. Relenting, however, Durvasas promises that Dushyanta shall remember her on seeing the ring. Shakuntala sets out to join her husband in the way he has chosen a sacred pool and loses the ring. The king does not recognize her, and she is obliged to return to the forest, where she gives birth to Bharata. A fisherman finds the ring, and when he finds a royal ring, which is taken to the king with the fisherman, who is thought to have stolen it. On seeing the ring the king recognizes it, remembers Shakuntala, and goes in quest of her. The play exists in two recensions, one known as the Devanagari, the other as the Bengali, of which the former is thought to be the older and purer. It was from the latter that William Jones made his celebrated translation of 1789, which, translated into German by Forster in 1791, so excited the admiration of Herder and Goethe. Monier Williams has published an exquisite and masterly translation of the Devanagari recension.

Shaler (shā'lėr), **Nathaniel Southgate.** Born at Newport, Ky., Feb. 22, 1841. An American geologist and paleontologist. He graduated at the Lawrence Scientific School (Harvard) in 1862; served in the Union army during the Civil War; and was professor of paleontology at Harvard from 1868 to 1887, when he became professor of geology. Among his works are "A First Book in Geology" (1885), "Aspects of the Earth" (in the American Commonwealths series), "The interpretation of Nature" (1893), etc.

Shallow (shal'ō). A solemn, insignificant country justice in Shakspere's "Merry Wives of Windsor," and in the 2d part of "King Henry IV.," by Shakspere. He has lofty pretensions to having been a roaring blade in his youth, and is a satire on Sir Thomas Lucy, the author's old Stratford enemy. Phelps made a great hit in Falstaff in this part.

Shalmaneser (shal-ma-nē'zėr). [Assyr. *Salmanu-asarid*, the god Shulman is the leader.] The name of four Assyrian kings. The first reigned about 1330 B. C. From an inscription of Asurnazirpal (884–860 B. C.) it is known that he founded the city of Calah (modern Nimrud), which he made his residence, and that he extended the boundaries of the Assyrian empire in the northwest. The second reigned 860–824 B. C. He was warlike and engaged like his father Asurnazirpal, and under him the first direct collision between Assyria and Israel took place. The extant monuments of him are the "black obelisk," four feet high, with 190 lines of cuneiform writing and representations of war-scenes in bas-relief, discovered by Layard in the Nimrud mound; two bull-colossi covered with inscriptions, found in the same place; a monolith, found in Nimrud; bronze coverings of the palace doors decorated with scenes of war, games, sacrifices, etc., and an account of the first nine years of his reign, in cuneiform characters, by Hormuzd Rassam, in Balawat. From these monuments we learn that Shalmaneser II. invaded Babylonia, conquering the city of Babylon and many other cities. He then directed his forces against the confederation of the Syrian kings to which also Ahab of Israel belonged, and defeated it in the battle of Karkar. In 842, after the defeat of Hazael of Damascus, he received tribute from Tyre, Sidon, and Jehu of Israel. The last four years of his reign were occupied with the rebellion which one of his sons had aroused, and which his other son put down two years after his father's death. The third reigned 782–772 B. C. During the ten years of his reign he made six expeditions against Armenia (Urartu), one against Damascus, and one against Chataraka (the biblical Hadrach). The fourth reigned 727–722. He is known from the Old Testament. He undertook an expedition into the west, on which occasion Hosea, king of Israel, who became tributary to his predecessor, Tiglath-Pileser III., repeated the assurance of his submission and brought him presents. But, soon after the departure of the Assyrian king, Hosea entered an embassy to the Egyptian king Shabo (biblical So) offering him his alliance, whereupon Shalmaneser IV. appeared before Samaria, took the faithless Hosea captive, and laid siege to the city (2 Ki. xvii.). From the cuneiform inscriptions it is known that Shalmaneser IV. himself met with his death during the siege, and that it was his successor, Sargon, who succeeded in taking Samaria after a three years' siege.

Shankara (shang'ka-ra), or **Shankaracarya** (-kā-chär'ya). ['The teacher or doctor Shankara.'] One of the most renowned theologians of India. His exact date is uncertain: Wilson puts it in the 8th or 9th century A.D. Tradition generally makes him a native of Malabar. He is described as having led a wandering, controversial life, and as having gone toward the close of it to Kashmir and then to Kedarnath in the Himalaya, where he is said to have died at the age of 32. He is held to have worked various miracles, among others reanimating and entering the dead body of King Amaru in order to become temporarily the husband of Amaru's widow that he might be able to argue with a Brahman on the wedded life, and he was even regarded as an incarnation of Shiva. He is made the founder of the Dashnamidandins, or 'Tennamed Mendicants' (so called as divided into 10 classes, each distinguished by the name of one of the 10 parts of each of Shankara's 4 chief pupils), one of the principal Shaiva sects. South Indian pandits represent him also as founder of all the principal sects of Hindūism — viz., the Shaivas, the Vaishnavas, the Shaktas, the Ganapatyas, the Sauras, and the Pashupatas — though falsely, as Shankara was opposed to all sectarian ideas. He is said to have established the Shaiva order of monks, particularly one still flourishing at Sringiri on the Western Ghats, near the sources of the Tungabudra. The essential fact of his life is that he established Brahmanism or Vedic philosophy into its final form, and popularized it into a national religion. A large number of works are ascribed to him, of which the most important are commentaries on the Vedantasutras, the Bhagavadgita, and the principal Upanishads.

Shankaravijaya (shan-ka-ra-vi'ja-ya). In 1637 he graduated at King's College, Aberdeen; in 1648 was chosen a regent of philosophy in St. Leonard's College, St. Andrews; and in 1654 he was appointed minister of Crail in Fifeshire. He was a leader of the Resolutioners against the Protesters. In 1660 he went to London to counteract the influence of the Protesters with the Protector. In Feb., 1660, he visited London again to watch the movements of Monk. He was well received by Monk and sent to Charles II. at Breda, ostensibly to advocate the Presbyterian cause. He was in confidential communication with Charles and Clarendon, assisted in the Episcopacy plan in Scotland, and for his treachery was appointed archbishop of St. Andrews in Aug., 1661. When Lauderdale became supreme, Sharp cooperated in passing the National synod Act of 1663, the first step in subjecting the church to the crown. In 1667, with Rothes, he was the governing power in Scotland. Their tyranny and cruelty provoked a rising of the Covenanters. On July 10, 1668, an attempt to assassinate him was made by Robert Mitchell, a preacher. He was murdered by a number of Covenanters while on his way to St. Andrews.

Sharp, Rebecca (**Becky Sharp**). One of the principal characters in Thackeray's "Vanity Fair": a frank delineation of the carnal precocity of poverty," whose object it is to rise in the world. She is agreeable, cool, selfish, and entirely unmoral; "small and slight of person, pale, sandy-haired, and with green eyes, habitually cast down, but very large, cold, and attractive when they looked up."

But the finest character in the whole novel is Miss Rebecca Sharp, an original personage, worthy to be called the author's own, and as true to life as hypocrisy, ability, and cunning can make her. She is altogether the most important person in the work, being the very impersonation of talent, tact, and worldliness, and working her way with a graceful and executive impudence unparalleled among managing women. She indicates the extreme point of worldly success to which these qualities will carry a person, and also the impossibility of their providing against all contingencies in life.

Shasu (shä'sö). See the extract.

Very distinct from the Hamitic race of Kafir are the Shasu or Bedouin Plunderers, of the Egyptian monuments. They were the enemies of the settled populations of Canaan, as their descendants are at the present day. We hear of them as existing from the Egyptian frontier up to the north of Palestine, "the land of the Amorite," where their place was taken in the fifteenth century before our era by the invading Hittite. They were properly inhabi-

tants of the desert, who perpetually hovered on the borders of the cultivated land, taking advantage of every opportunity to harry and plunder it.

Shays's Rebellion. An insurrection in western Massachusetts against the State government, 1786–87, under the leadership of Daniel Shays and others, occasioned by the unsettled condition of affairs at the close of the Revolution and the consequent popular discontent. The chief grievances complained of were that the governor's salary was too high, that the Senate was aristocratic, that the lawyers were extortionate, and that taxes were too burdensome; and the principal remedy demanded was a large issue of paper money. Shays, in Dec., 1786, attempted at the head of 1,000 followers to prevent the session of the Supreme Court at Springfield, but was forestalled by the militia. In Jan., 1787, three bodies of insurgents, under Shays, Luke Day, and Eli Parsons respectively, marched on Springfield with a view to capturing the Continental arsenal. The largest body, that under Shays, numbering 1,000, was attacked by the militia under a 4,000 under General Benjamin Lincoln on the 25th, and was put to flight with a loss of 2 men killed and 1 wounded. The fugitives, including Shays, joined the force under Eli Parsons. The insurgents were finally dispersed Feb. 1787, at Petersham, where 150 of them were captured. Shays escaped. She Stoops to Conquer, or the Mistakes of a Night. A comedy by Oliver Goldsmith, first played March 15, 1773.

At the present day it is probably the best known of the author's works, and, outside Shakespeare and Sheridan, the English play with which the greatest number of persons are familiar. Yet post-Elizabethan comedy which preceded it in this country, those of Congreve alone can be named by its side; and, if it is less artistically constructed, somewhat more carelessly written, and much less witty, its moral purity and wholesomeness, its fund of good spirits, and its wonderful flow of natural dialogue, are qualities which raise it above a level with "Love for Love" or "The Way of the World." Of succeeding comedies, but one has approached it in lasting popularity — the "School for Scandal," produced four years later, by Sheridan.

The shaivas, or shiva-worshippers, assign to him the first place in the triad, identify re- him with creation and reproduction as well as destruction, and so constituting him the Supreme Being. This character in present Hinduism is supposed to be a development of that of the Vedic Rudra (which see), by the addition of many characteristics drawn from the popular, as distinguished from the priestly religion, and taken especially from the religion of the aborigines, whose chief god some suppose Shiva to have been. The name Shiva, "the propitious," seems to have been at first only a euphemistic epithet used to propitiate Rudra, the god of storms, and then to have supplanted the name Rudra itself. According to the Vishnupurana the three principal incarnations of Shiva are Durvasa, Bhairava, and Hanuman. Lists of Shiva's names, Bhairava, Ishana, Pashupati, Bhima (or Sarva), and Mahadeva, which are usually represented under forms of monstrous human size, the sun, water, Earth, air, fire, Ether, the offering, Brahmans, and the Soma sacrifice-priest, the most usually broader of these forms. As presiding over the powers which keep the construction, he is generally worshipped under phallic symbols. As sharing with Vishnu the government of moral justice and punishment he is also a white-faced, pleasure-loving tamer (his four hands are shown with a Kala, or destroying time), he is worshipped, as Ardhanari, in both female, he symbolizes the unity of the male and female principle, as Panchanana he has five faces, he has a third eye in his forehead, which he held to be the source of past, present, and future; while a crescent about the second eye marks the measure of time by months. He is represented on his neck that he years, and a necklace of skull-and-serpents about his person the evolutionary cycle. He is often thickly matted, and projects likes horn from his forehead on his head he bears the Ganges. His throat is dark. In from the poison which would have destroyed the world had he not swallowed it at the churning of the sea. He wears sometimes a deerskin, sometimes a tiger-skin, sometimes an elephant's skin, and at times a wolf, tiger-skin or holds a deer in one of his hands. He wears as a trident (now held to symbolize his as creator, destroyer, and Regenerator) a bow, a thunderbolt, an ax, a skull surmounted staff, and a spear, and upon the khikara. He carries a drum shaped like an hour-glass and a noose. His servants are the demons called Pramathas, his chief Nandi, his wife Durga (which see), and his sons Ganesha and Kartikeya. Sibylline Books, Sibylline Oracles. See *Sibyls*.

Sibyls (sib'ilz). In ancient mythology, certain women reputed to possess special powers of prophecy or divination and intercession with the gods in behalf of those who resorted to them. Different writers mention from one to twelve sibyls, but the number commonly reckoned is ten, enumerated as the Persian or Babylonian, Libyan, Delphian, Cumæan, Erythræan, Samian, Cumæan, Hellespontine or Trojan, Phrygian, and Tiburtine. Of these the most celebrated was the Cumæan sibyl (of Cumæ in Italy), who, according to the story, appeared before Tarquin the Proud and offered him nine books for sale. He refused to buy them, whereupon she burned three, and offered the remaining six at the original price. On being again refused, she burned three more, and offered the remaining three at the price she had asked for the nine. Tarquin, astonished at this conduct, bought the books. Sibylline books found to contain allusions as to the worship of the gods and the policy of the Romans. These Sibylline Books, or books professing to have this origin written in Greek hexameters, were kept with great care at Rome, and consulted from time to time by oracle-keepers under the direction of the senate. They were destroyed in the burning of the temple of Jupiter in 83 B. C. Fresh collections were made, which were finally destroyed soon after A. D. 400. The Sibylline Oracles referred to by the Christian fathers belong to early ecclesiastical literature, and are a curious medley of Jewish and Christian material, with probably here and there a snatch from the older pagan source. In composition they seem to be of various periods, from the 2d century before to the 3d century after Christ.

But the Sibylline verses, which clearly belong to this period [of Antoninus], express, in the most remarkable manner, this spirit of exulting menace at the expected simultaneous fall of the Roman authority and of Jewish and Christian origin of the whole of the Sibylline oracles now extant is not distinctly apparent, either from the style, the manner of treating the subject, or the historical allusions. It is manifest that they were largely interpolated by the Christians to a late period; and some of the books can be assigned to no other time but the present. Much, no doubt, was of an older date. It is especially clear that the Fathers of this time would quote contemporary forgeries as ancient prophecies. The Jews of Alexandria, who had acquired from the Greeks the practice of falsely dedicating some talent for the translation of their sacred books into the Homeric language and metre, had, no doubt, set the example. Whether their own pious frauds were in imitating them to the Sibyls, whose names were universally venerated, as revealing to mankind the secrets of futurity. They may have begun by comparing their own prophets with the ancient ones, and spoken of the predictions of Isaiah or Ezekiel as their Sibylline verses, which may have been another word for prophetic or oracular.

Encyc. Brit., art. Christianity, Hist. of Christianity, II. 122.

Almost every region of heathenism boasts its Sibyl. Poetic predictions, ascribed to these inspired women, were either published or religiously preserved in the sacred archives of cities. Nowhere were they held in such awful reverence as at Rome. The opening of the Sibylline books was an event of rare occurrence, and only at seasons of fearful disaster or peril.

Sicily (sis'i-li). [Gr. *Σικελία*, from *Σικελοί* (L. *Siculi*), the ancient inhabitants; L. *Sicilia*, It. *Sicilia*, *Isola di Sicilia*, G. *Sicilien*.] An island in the Mediterranean, belonging to the Kingdom of Italy, and forming (with small neighboring islands) a compartimento. Its chief cities are Palermo, Catania, and Messina. It is situated southwest of the mainland of Italy (separated by the Strait of Messina), and is triangular in shape. The general surface is elevated and mountainous: the culminating point is Mount Etna, and the principal ranges are in the north (Peloritan, Nebrodian, and Madonie). The principal plain is Catania. The leading products are wheat, oranges, citrons, olives, lemons, and other fruits, sulphur, silk, and salt. Sicily was formerly famous as the granary of Italy and Rome. It contains 7 provinces — Messina, Catania, Syracuse, Caltanissetta, Palermo, Girgenti, and Trapani. The inhabitants are of mixed descent. The early inhabitants were the Sicani, Siculi, and Elymi, and Phenician colonies were settled in early times. Greek colonization commenced in the 8th century B. C., among the chief settlements being Syracuse, Catana, Naxos, Selinus, and Himera. An unsuccessful carthaginian invasion occurred in 480 B. C., and an Athenian invasion in 415 B. C. The western part of Sicily was conquered by Carthage in the end of the 5th century B. C. Syracuse was the leading Greek power under Dionysius the Elder (405–367 B. C.) and Agathocles, in the 4th century. The island was the scene of the Punic wars and events in the campaigns of Pyrrhus and the Second Punic war. The greater part of it was annexed by Rome as a province and Agrigentum was subjugated in the Second Punic war. Sicily suffered in the servile wars of the 1st century B. C., and under the subsequent Roman rule. Area, 9,564 sq. m. It was conquered by Count Roger I. of Hauteville, 1061–90. It was conquered by Henry VI. in 1194, and was the favorite residence of Emperor Frederick II. (1197–1250). Its statutes were confirmed by Charles of Anjou in 1266. The Sicilians revolted against the Angevins in 1282, and Sicily came under the house of Aragon. It was separated from Aragon in 1458, was reunited with it in 1412, was several times united and separated from Naples, and finally united with it under Spanish rule in 1503, succeeded to Savoy in 1713, and to Austria in 1720. It was conquered by Spain in 1734, was united with Naples and ruled by a Bourbon dynasty in it, and was separated from Naples and made a separate kingdom under Ferdinand I. in 1806–8. There were unsuccessful risings in 1820, 1836 and 1848–49. The Bourbons were overthrown by the expedition of Garibaldi, and the island was annexed to Italy as the dominions of Victor Emmanuel. Sidon (sī'don). [" Fishing-town," Gr. *Σιδών.*] The oldest city of ancient Phœnicia. From the 17th to the 13th century B.C. it held the supremacy in Phœnicia and established most of the Phœnician colonies. Later it was outrivaled by Tyre, but continued to maintain a important position. In 351 B. C. it was destroyed in consequence of a revolt against the Persian king Artaxerxes III. Ochus. It was still a wealthy city about the beginning of the Christian era. During the Crusades it was several times destroyed. At present Sidon is represented by the town of Saida, with about 15,000 inhabitants. The ancient Necropolis, long known and explored, has yielded numerous monuments of the most diverse ages and civilizations, from the oldest Phœnician, still under Egyptian influence, through the various stages of Greek art. In 1887 an important discovery was made, consisting of an intact subterranean mausoleum of several chambers, containing 22 sarcophagi, several of them bearing polychrome sculptures in relief of the best Greek art, and almost uninjured. The sarcophagi were transported to the museum at Constantinople, where they form one of the most important existing collections of ancient art. The sarcophagi were not executed at Sidon, but were imported from different places and at different times. Their usual form is that of a trough. Four only are completely covered with sculpture; but these four rank with the finest existing productions of Greek art, and are the only sarcophagi known which belong to the best period of sculpture. The oldest is of Lycian form, with Centaurs and Lapiths and hunting-scenes. The second, dating from the beginning of the 4th century B. C., is called "the Sarcophagus of the Weeping Women," from the graceful figures in the intercolumniations of its Ionic colonnade. The third bears varied scenes from the life of an Oriental ruler. The fourth is so splendid that its discovery may be pardoned for proclaiming it the sarcophagus of Alexander. Four of its six sculptured panels represent hunting- or battle-scenes in which the portrait of Alexander, and contemporaneous, is actually figures. It is no doubt the tomb of an Oriental chief who had enjoyed the companionship of the Macedonian conqueror. See *Phœnicia.*

He was descended from a noble family, received a careful education, and married Papianilla, the daughter of Avitus (afterward emperor). He was appointed governor of Rome by the emperor Anthemius in 467, and afterward raised to the rank of a patrician and senator. He ultimately entered the church, however, and in 472 succeeded Igparibius as bishop of Clermont. His extant works are "Carmina" and "Epistolarum libri IX."

> One man alone . . . gives us that more detailed information concerning the thoughts, characters, persons of the nobler part of Gaul which we look for in vain in the bones of the chron-dogers live. This is Caius Apollinaris Sidonius, man of letters, Imperial functionary, country gentleman and bishop, who, notwithstanding much superficial weakness of character and a sort of epigrammatic dulness of style, is still the most interesting literary figure of the fifth century.

Siena (sē-ā'nā), or **Sienna** (sē-en'nā). The capital of the province of Siena, Italy, situated in lat. 43° 19′ N., long. 11° 19′ E.: the ancient Sena Julia or Colonia Julia Senensis. It has considerable trade and manufactures, and is celebrated for its works of art. The cathedral is a notable example of Italian Pointed buildings, essentially of the 13th century. 289 feet long, 80 across nave and aisles, and 170 across the transepts. In the 14th century the plan was formed to make the existing church merely the transept of a grand new cathedral, facing the south, and much was done toward carrying this out, but the work was stopped by the plague of 1356. The rich triple-pedimented front is inlaid in black, red, and white, with painting and gilding: the interior, built throughout of alternate courses of black and white marble, even to the columns, is remarkably fine and impressive: it is famous for its mosaic and graffito pavement in pictorial designs (the finest work of the kind in existence), and for its hexagonal sculptured pulpit by Niccolò Pisano. In addition, it is full of fine church furniture, and possesses statues by Michelangelo, a noted painting of the Madonna by Duccio, and many beautiful frescos by Pinturicchio and others. There is a lofty square campanile on the south transept. The Palazzo del Governo, or Palazzo Pubblico (now containing the Museo Comunale), by Rosellino, finished in 1500, is one of the best-proportioned and most effective Renaissance palaces in Tuscany. The Palazzo Publico, an imposing 14th-century structure, with tracered windows, arcades, and a lofty campanile, is famous for the frescos which adorn its halls. The Piazza del Campo, churches of San Giovanni and San Domenico, university, Opera del Duomo, Ospizio di San Bernardino, picture-gallery, libraries, house of St. Catherine, fountains, and palaces of Tolomei, Buonsignori, etc., are also notable. Siena was probably a town of the Senonian Gauls. It was made a Roman colony by Augustus; was in the middle ages the capital of a powerful republic, and an important art-centre; was a stronghold of the Ghibellines, and a rival of Florence, which it defeated at Monte Aperto in 1260; was under the rule of the despot Pandolfo Petrucci about 1500; was besieged and taken by the Florentines and Imperialists in 1555; and was finally incorporated with Tuscany in 1557. It was famous in the development of architecture, painting, and wood-carving. Population (1892), 28,500.

The pool of Siloam which is still in existence formerly had an outlet in the southeast called the "lower pool," and is now called *Birket Hamra* ('red pond'). Another part of the former water-reservoir is now occupied by gardens. The Virgin's Fount is intermittent. It gives the length of the channel, and, among other details, mentions that the workmen began the boring from both ends. The Arabs called Siloam *Ain Silwan*.

Hardly less interesting has been the discovery of the inscription of Siloam, which reveals to us the very characters used by the Jews in the time of Isaiah, perhaps even in the time of Solomon himself. The discovery has cast a flood of light on the early topography of Jerusalem, and has made it clear as the daylight that the Jews of the royal period were not the rude and barbarous people it has been the fashion of an unbelieving criticism to assume, but a cultured and literary population.

> Simon probably was one of that class of adventurers which abounded at this period, or like Apollonius of Tyana and others at a later time, with whom the opponents of Christianity attempted to confound Jesus and his apostles. His doctrine was Oriental in its language and in its pretensions. He was the first Æon or Emanation, or rather perhaps the first manifestation, of the primal Deity. He assumed not merely the title of the Great Power or Virtue of God, but all the other appellations of the Word, the Perfection, the Paraclete, the Almighty, the whole combined attributes of the Deity. He had a companion, Helena, according to the statement of his enemies a beautiful prostitute, whom he found at Tyre, who became in like manner the first conception (the Ennoea) of the Deity; but who by her conjunction with matter, had been enslaved to its malignant influence, and, having fallen under the power of evil angels, had been in a constant state of transmigration, and, among other mortal bodies, had occupied that of the famous Helen of Troy.

Here he dwelt in the town of Minoa. The chronologists place him about Ol. 29 or 30 (660 B. C.), and make him contemporary with, if not later than, Archilochus. Though chiefly celebrated as one of the earliest iambic poets, he wrote the "Lamentations of Samos," in two books of elegiacs, of which no trace now remains. About forty fragments of his iambic verse are to be found in Bergk's collection, but only two of these are of any importance. One (25 lines) reflects on the restlessness and trouble of life, and recommends equanimity in a spirit of sad wisdom. The other (120 lines) is the famous satire on women, comparing them to sundry animals, owing to their having been created of these respective natures.

Simurgh (sē-mōrgh'). [From *si*, thirty, and *murgh*, bird (as having the size of thirty birds).] In the Shahnamah, the huge bird that cared for and reared the infant Zal when, in consequence of his white hair, he had been exposed by his father Sam near Mount Alburz.

The child remained thus in this place one day and one night without shelter. Sometimes he sucked his thumb, sometimes he uttered cries. The little ones of the Simurgh being hungry the night bird rose from his nest into the air. He saw a child who needed milk and was crying, he saw the earth that seemed like a burning sea. Thorns formed the cradle of the child his nurse was the earth, his body was naked, his mouth devoid of milk. Around him was the soil black and burned. Above these in that had become fiery hot. Oh, why were his father and his mother not tigers? He would then perhaps have found a shelter against the sun. God gave to Simurgh an impulse of pity, so that the bird did not think of devouring that child. He came down from the cloud, took him in his talons, and carried him from the burning rock. He bore him swiftly to Mount Alburz, where was the nest of his family. He bore him to his little ones that they might see him, and that his mournful voice might prevent them from devouring him, for God granted him his favors, since he was predestined to enjoy life. The Simurgh and his little ones looked at this child, whose blood was streaming from his two eyes. They surrounded him with marvellous tenderness, they were astonished at the beauty of his countenance. The Simurgh chose the tenderest version, that his little guest, who had no milk, might suck blood. So a long time passed during which the child remained hidden in this place. When the child had grown, a long time still passed upon this mountain. He became a man like a lofty cypress, his breast was like a hill of silver, his stature like a reed.

The rises the barren, rugged, and majestic triangle of the Sinai Mountain, the Jebel-et-Tur or Tur-Sinai, formed of crystal masses (granite and gneiss intermingled with dioryites and porphyries). In this mountain-chain are to be distinguished the following groups: in the northwest is the Jebel-Serbal (6,540 feet high), overhanging the coast of the Gulf of Suez; the Wady-el-Feiran, in the north-east of the peninsula. The western ridge of the Musa is the Jebel-el-Rahah, and the eastern ridge that of the St. Catherine Mountain in the south rises; the eastern ridge is the Jebel-el-Deir ("mountain of the monastery"). In the Wady Sebaiyeh, a fertile valley, between the Musa and Deir, the monastery of St. Catherine is situated, with its beautiful gardens. Sindbad (sind'bad) **the Sailor.** A character in the story of that name in the "Arabian Nights' Entertainments." He is a wealthy citizen of Bagdad, called "the Sailor" because of his several long voyages, in which he discovers a roc's egg and the valley of diamonds, escapes twice from the Anthropophagi, is buried alive, kills the Old Man of the Sea (a monster which got on his back and would not dismount), is the bearer of a letter and gifts from the King of the Indies to Harun-al-Rashid, and is sent back by that monarch with his acknowledgment of the latter. During his last voyage he finds a valley filled with the dead bodies of elephants, from which he obtains much ivory. Sometimes spelled *Sinbad*.

Well known in Europe as having the history of his voyages incorporated in the Thousand and One Nights, but they form in Arabic a distinct work, which Baron Walckenaer (in "Notices des manuscrits," etc., Paris, 1842, t. 1, p. 6) regards as of equal value with those of Soliman and Abu Said. The voyages belong to the 9th century, when the commerce of the Arabs under the khalifs of Baghdad was at its highest activity. In his first voyage Sindbad reaches the country of the maharaja. . . . In Sindbad's second voyage mention is made of the kingdom of Risha (the Malay Peninsula occupied by the Malays), the manner of the preparation of camphor, produced in the mountain forest there, is accurately described. In the third voyage the island of Sillahet is first mentioned. In the fourth he was carried to a country (Malabar) where he found men gathering pepper, and from it he went to the isle of Navum (the Nicobars) and on to Kela (Quedah or Keydah?). In the fifth voyage he is shipwrecked on the island (*i. e.* country) of the Old Man of the Sea, probably somewhere on the Konkan coast. Thence he crossed the sea to the Maldives, and back again to the pepper country of Malabar, passing on to the peninsula of Comorin, where he found the aloes-wood called santy, and afterwards to the pearl-fisheries of Ceylon. From Ceylon he returned back to Bagdad. In the sixth voyage he visited an island (*i. e.* country) where were superb trees of the kinds named santy and comary, and the island of Serendib (Ceylon), which was also the limit of his seventh and last voyage. *Balfour*, Cyclopedia of India.

The story of Polyphemus is in the third voyage of Sindbad. Other parts of the adventures of that bold mariner seem to be borrowed from the History of Antonius in Pausanias. *Dunlop*, Hist. Prose Fiction, II. 508.

Sipylus (sip'i-lus). [Gr. *Σίπυλος.*] In ancient geography, a mountain of Lydia, Asia Minor, near Smyrna.

> Not far from Karabel another monument of Hittite art has been discovered. Hard by the town of Magnesia, on the lofty cliffs of Sipylos, a strange figure has been carved out of the rock. It represents a woman, with long locks of hair streaming down her shoulders, and a jewel like a lotus-flower upon the head, who sits on a throne in a deep partitioned niche. Asiatic historians assert that it was the image of the daughter of Assaon, who had sought death by casting herself down from a precipice; but Greek legend preferred to see in it the figure of "weeping Niobe" turned to stone. Already Homer, in the Iliad, had told how Niobe, whose children had been slain by the gods, "now changed to stone, broods over the woes the gods had brought them among the rocks, in lonely mountains, even in Sipylos, where they say are the couches of the nymphs who dance on the banks of the Achelous." But it was only after the settlement of the Greeks in Lydia that the old monument on Mount Sipylos was held to be the image of Niobe. The limestone rock out of which it was carved dripped with moisture after rain; and as the water flowed over the face of the figure, disintegrating and disfiguring the stone as it ran, the pious Greek beheld in it the Niobe of his own mythology. The figure was originally that of the great goddess of Asia Minor, known sometimes as Atergatis or Derketo, sometimes as Kybelé, sometimes by other names.

Slavs (slävz). 1. A race of peoples widely spread in eastern, southeastern, and central Europe. The Slavs are divided into two sections: the

southeastern and the western. The former section comprises the Russians, Bulgarians, Serbo-Croatians, and Slovenes; the latter, the Poles, Bohemians, Moravians, Slovaks, Wends, etc.

We start with the north of Europe, with that race which at the present day occupies the east of any portion of the globe: the Slavs. It is generally known that these peoples appear for the first time in history in the first century of our era under the name of Veneti (Tacitus, Germ., 46) or Venedi (Pliny, Hist. Nat., IX. 96), and that they abode at this period can be made out with tolerable certainty. On the one hand, they cannot yet have touched the north coast of the Black Sea, for this district was occupied by the Persian Sarmatæ or Sauromatæ; on the other hand they cannot on the west have crossed either the Carpathians or the Vistula; for, as far as the river mentioned, Tacitus is acquainted with Teutonic tribes, which partially, as in the case of the Bastarnæ, extended over it as far as the modern Galicia and farther; and in the ancient Getic or Dacian and Pannonian proper names, large numbers of which have come down to us no one as yet has succeeded in discovering any trace of Slavonic. If, then, in the beginning of our era, the abode of the Slavs must be sought north of the Black Sea steppes and east of the Vistula and the Carpathians, it is also probable that the same people was settled in the district mentioned as much as five centuries earlier.

Schrader, Aryan Peoples (tr. by Jevons), p. 427.

2. See the extract.

The force he (Abder-Rahman III.) employed to sustain the central power was a large standing army, at the head of which stood his black guard of Slavs, or purchased bondsmen. They were originally composed chiefly of men of Slavonian nationality, but came by degrees to include Franks, Galicians, Lombards, and all sorts of people, who were brought to Spain by Greek and Venetian traders, and sold while still children to the Sultan, to be educated as Moslems. Many of them were highly cultivated men, and naturally attached to their master. He accompanied the expedition, consisting of three vessels and 144 men, which left London in 1606 under the command of Christopher Newport, for the purpose of establishing a colony in Virginia. He professed to have been kept under arrest during part of the voyage on suspicion of aiming to usurp the government and make himself king. The colonists sighted the Virginia coast (Cape Henry) April 26, 1607. The same day they opened a sealed packet which they carried with them, containing the list of the royal government of the colony. The orders named a council of seven members, including John Smith (although he first learned that he had allowed to take the seat), which was to elect an annual president, and which ultimately chose Edward Maria Wingfield. The settlement of Jamestown having been in 16, 1607, Smith's energy in exploring the neighboring rivers, and his success in obtaining supplies from the Indians, soon secured for him admiration by his jealous colleagues. While on a voyage of exploration up the James in 1607 he was captured by the Indians and brought before Powhatan, who after a six weeks' captivity sent him back to Jamestown (see *Powhatan*). Which he returned to Jamestown, he found the colonists reduced to 40 men; but they were presently reinforced by the arrival of Captain Nelson with 140 emigrants. Smith explored the coasts of the Chesapeake Bay as far as the mouth of the Patapsco June-July, and the head of the Chesapeake July–Sept., 1608. On Sept. 10, 1608, he was elected president. Captain Newport returned from a visit to England with 70 colonists. Insubordination and Indian uprisings were overcome by Smith's tact and energy, but false accounts of his administration were sent home by his enemies. A new charter was obtained by the proprietors in England (the London Company). Lord Delaware was made governor, and three commissioners were empowered to manage the affairs of the colony until the arrival of the governor. The commissioners sailed in 1609 with over 500 emigrants in nine ships, one of which, the Sea Venture, was shipwrecked off the Bermudas. The warrant of the new commission was lost in the shipwreck, with the result that Smith retained his presidency and enforced his authority over the new comers, who were composed largely of the riffraff of London. While on an exploring expedition he was severely wounded by the explosion of his powder-bag, and returned to London in the autumn of 1609. He subsequently (in 1614) conducted an expedition fitted out by some London merchants to the coast of New England, which he explored from Penobscot to Cape Cod. In 1615 he started on a similar voyage, but was captured by the French. He escaped the same year, and the remainder of his life was spent in many endeavors to procure financial support for the establishment of a colony in New England. He obtained the promise of 20 ships in 1617, and received the title of Admiral of New England, which he bore until his death. The expedition, however, never sailed. He wrote "A True Relation" (1608), "A Map of Virginia" (1612), "A Description of New England" (1616), "New England's Trials" (1620), "The General Historie of Virginia, New England, and the Summer Isles" (1622) "An Accidence for Young Seamen" (1626), "Travels and Works" (1630), and "Advertisements for the Inexperienced Planters of New England" (1631).

In 1870 he was appointed Hebrew professor in the Free Church College at Aberdeen. A keen ecclesiastical controversy arose out of certain of his writings — the question at issue being the extent of liberty in matters of Biblical criticism and interpretation permissible in an evangelical church. His contributions to the "Encyclopædia Britannica," especially the article "Bible," published in 1876, led to a series of attempts to convict him of heresy. These were unsuccessful, largely owing to the attraction of a powerful personal influence, as well as to his skilful conduct of his defense; but in 1881 he was removed from his chair without being deprived of its emoluments, of which, however, he declined to continue acceptance. The ground assigned by the Assembly for this action was that "they no longer considered it safe or advantageous for the church that Professor Smith should continue to teach in one of her colleges." From 1881 he was associated as joint-editor of the "Encyclopædia Britannica" with T. Spencer Baynes, after whose death in 1887 he was sole editor. He made a bequest to the United States for the establishment of a scientific institution. See *Smithsonian Institution.*

Smithsonian Institution. An institution of learning at Washington, established in 1846, for the "increase and diffusion of knowledge among men." It was founded by James Smithson, an English chemist and mineralogist, and a fellow of the Royal Society. At his death, in 1829, he bequeathed £105,000 to the government of the United States in trust "to found at Washington an establishment, under the name of the Smithsonian Institution, for the increase and diffusion of knowledge among men," which bequest became operative in 1835. In 1838 the United States government received from the Court of Chancery of Great Britain $515,169, which sum was increased by careful financial management to $703,418. This sum was further increased in 1867 by a gift from Mr. Thomas George Hodgkins of Setauket, New York, of $200,000, a portion of the income of which was to be devoted to "the increase and diffusion of more exact knowledge in regard to the nature and properties of the atmospheric air, in connection with the welfare of man." Mr. Hodgkins also named the Institution as his residuary legatee. Funds of the Institution are deposited in the United States Treasury, the government paying 6 per cent. interest on the fund. After the discussion of many years, Congress passed an act in 1846 creating an "establishment" consisting of the President and members of the cabinet and a board of regents (the Vice-President, 3 senators, 3 members of the House of Representatives, and six other citizens), the executive officer to be a secretary elected by the board of regents. The Institution has devoted itself to the two lines of work marked out in the act, namely, the begist- of the prosecution of original research, and the publication and distribution of memoirs on subjects relating to science. During the first years of its existence, it has originated many scientific undertakings of great importance, which have since been taken up by the government, and for which separate bureaus have been established, some independent of the Institution, others its direction. Such are the meteorological service the United States Weather Bureau has grown: in connection with its work in ichthyology the United States Fish Commission was established. Under the direction of the Smithsonian Institution are the United States National Museum, the legal custodian of all government collections; the Bureau of International Exchanges; the Bureau of American Ethnology; the Astro-Physical Observatory; and the National Zoological Park. The Institution has a library of 150,000 volumes (especially rich in transactions of learned societies and scientific journals). This library was deposited in 1866, by act of Congress, with the library of Congress, only a working library being retained by the Institution. The Institution, however, enjoys the customary use of its library as well as a free use of the library of Congress. The Institution has had three secretaries—Joseph Henry, a physicist (1846–78); Spencer Fullerton Baird, a zoologist (1878–87); and Samuel Pierpont Langley, an astronomer and physicist (1887–). Its publications consist of "Contributions to Knowledge" (quarto, vols. 1–25), "Miscellaneous Collections" (vols. 1–36), and Reports (1846–92). Reports of the National Museum 1884–92, Bulletins of the National Museum (1–50), Proceedings of the National Museum (1–16), Annual Reports of the Bureau of Ethnology (vols. 1–10). It has a building, used for offices and exhibition halls. It has taken part in all the scientific expeditions and explorations conducted by the government, and in all international expositions. In 1893 it offered prizes of $10,000, $2,000, and $1,000 in connection with the Hodgkins bequest.

Socinians (sō-sin'i-anz). Those who hold to the doctrines of the Italian theologians Laelius Socinus (1525–62) and Faustus Socinus (1539–1604) and their followers. The term Socinianism is in theological usage a general one, and includes a considerable variety of opinion. The Socinians believe that Christ was a man miraculously conceived and divinely endowed, and therefore entitled to honor and reverence, but not to divine worship; that the object of his death was to perfect a complete legal system, and to prepare the way for his resurrection, the necessary historical basis of Christianity; that baptism is a declarative rite merely, and the Lord's Supper merely commemorative; that divine grace is general and exists through the means of grace, not special and personally efficacious; that the Holy Spirit is not a distinct person, but the divine energy; that the authority of the Scriptures is subordinate to that of the reason; that the soul is pure by nature, though contaminated by evil example and teaching from a very early age; and that salvation consists in accepting Christ's teaching and following his example. The Socinians thus occupy theologically a position midway between the Arians, who maintained the divinity of Jesus Christ, but held that he is coequal with the Father, and the Humanitarians, who deny his supernatural character altogether.

Socrates (sok'ra-tēz). [Gr. *Σωκράτης.*] Born at Athens about 470 B. C.; died there, 399. A famous Greek philosopher. He was the son of Sophroniscus, a sculptor, and of Phænarete, a midwife. Head first adopted his father's art: in the time of Pausanias a group of draped Graces, by him, still stood on the approach to the Acropolis. He soon, however, devoted himself entirely to the pursuit of philosophy, and became famous through the persistency and skill with which, in conversation with the sophists and with every one who would yield himself to the dialogue, he conducted the analysis of philosophical and ethical ideas ("the Socratic method"). He was above all a searcher after a knowledge of virtue (which indeed he identified with knowledge), and was in himself the noblest exponent of the ethical life of the Greeks. He served at Potidæa (431), Delium (424), and Amphipolis (422); was president of the prytanes in 406; and opposed the Thirty Tyrants. He is the chief character in the dialogues of Plato, in which his teachings are set forth (greatly modified by Plato's own views), and is the subject of the "Memorabilia" of Xenophon. His most famous pupils were Plato, Xenophon, and Alcibiades. He was bitterly attacked by Aristophanes as a sophist and innovator, and drew upon himself by his mode of life and the character of his opinions the enmity of many others. In 399 he was accused of impiety (the introduction of new gods) and of corrupting the youth; defended himself in a famous speech which enraged rather than conciliated his judges; was condemned; and drank hemlock in his prison, surrounded by his disciples.
